Physical Examination

Description

Upon arrival, participants had a brief physical examination conducted by a specifically trained physician. The physician did not know the participants' classification at enrollment. The data set includes measurements of basal temperature, weight, height, neck circumference, waist circumference, hip circumference, 30-minute recumbent blood pressure and heart rate, and 5-minute standing blood pressure and heart rate.

Refer to the codebook for the detailed information of each variable.

Study Sample

227 participants in the study completed the physical exam.

Data Collection Method

The physical examination was given at the time of admission by trained physician.
