Appendix C

Questionnaire Development: State Testing Results

1. Pretest (Cognitive Testing) & Field Testing Results for State-Developed Questions

Protocol Development Task

Describe the **pretests (cognitive interviews** and/or **field testing)** for state-developed questions, including descriptions of the participants, locations, and results. For all states, state-developed questions will require testing by the state in both mail and telephone formats. For those states that conduct surveillance in both English and Spanish, state-developed questions will require testing by the state in both languages.

2. Testing Results for State Questionnaire

Protocol Development Task

Describe the testing procedures for the **flow assessment** used to evaluate comprehension and flow of the complete <STATE> questionnaire, including descriptions of the participants, locations, and results. The <STATE> questionnaire will require testing by the state in both mail and telephone formats. For those states that conduct surveillance in both English and Spanish, the <STATE> questionnaire will require testing by the state in both languages.

This testing is only required after a major revision in which the entire survey has been changed.
