WYOMING

CDC National Survey: Maternity Practices in mPINC Infant Nutrition & Care

2015 REPORT

Changes in maternity care improve breastfeeding outcomes.

CDC's mPINC Reports have what you need to understand and improve care across Wyoming:

- → 2015 survey scores and ranks
- → Action ideas to improve outcomes
- → Trends across all mPINC surveys:

New! — *TOTAL SCORES* averaging all hospitals' scores

- — *POLICIES* for staff training and infant feeding care
- — *PRACTICES* in supplementing breastfed infants
- — *PROTOCOLS* for support after discharge to home

What is mPINC?

mPINC is CDC's national survey of maternity practices in infant nutrition and care.

What does mPINC measure?

Survey questions measure infant feeding care practices, policies, and staffing expectations in place at hospitals that provide maternity services.

Who is included in mPINC surveys?

Every other year, CDC invites all maternity hospitals* nationwide to participate in mPINC.

In 2015, **81%** of eligible Wyoming hospitals took part. (n=17)

* In states with free-standing birth centers, this includes hospitals and birth centers.

mPINC Wyoming 2015 Survey Results

Make mPINC work for you.

Use your mPINC data to bring together partners, identify gaps, celebrate achievements, and prioritize next steps.

Total **SCORE*** (out of 100): **77**

Overall **RANK**** (out of 53): **34th**

USE THESE RESULTS.

Action ideas:

Use your mPINC summary data to:

→ **Help** hospitals meet Joint Commission Perinatal Care Core Measure breastfeeding requirements.

→ **Ensure** hospital staff across Wyoming are trained in infant feeding care.

→ **Celebrate** the 1 Baby-Friendly hospital in Wyoming and show how to use mPINC to work toward Baby-Friendly designation.

mPINC Care Dimensions

Ideal response to each care dimension item

	Percentage of hospitals with ideal response	Care Dimension SUBSCORES
Labor and Delivery Care		92
Initial skin-to-skin contact is at least 30 min w/in 1 hour (vaginal births)	88%	
Initial skin-to-skin contact is at least 30 min w/in 2 hours (cesarean births)	94%	
Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	82%	
Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	100%	
Routine procedures are performed skin-to-skin	47%	
Feeding of Breastfed Infants		91
Initial feeding is breast milk (vaginal births)	81%	
Initial feeding is breast milk (cesarean births)	77%	
Supplemental feedings to breastfeeding infants are rare†	35%	
Water and glucose water are not used	100%	
Breastfeeding Assistance		87
Infant feeding decision is documented in the patient chart	100%	
Staff provide breastfeeding advice & instructions to patients	94%	
Staff teach breastfeeding cues to patients	100%	
Staff teach patients not to limit suckling time	44%	
Staff directly observe & assess breastfeeding	94%	
Staff use a standard feeding assessment tool	100%	
Staff rarely provide pacifiers to breastfeeding infants	25%	
Contact Between Mother and Infant		91
Mother-infant pairs are not separated for postpartum transition	77%	
Mother-infant pairs room-in at night	100%	
Mother-infant pairs are not separated during the hospital stay	81%	
Infant procedures, assessment, & care are in the patient room	0%	
Non-rooming-in infants are brought to mothers at night for feeding	100%	
Hospital Discharge Care		70
Staff provide appropriate discharge planning† (referrals & other multi-modal support)	71%	
Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	53%	
Staff Training		47
New staff receive appropriate breastfeeding education	20%	
Current staff receive appropriate breastfeeding education	13%	
Staff received breastfeeding education in the past year	44%	
Competency assessment in bf management & support is at least annual	44%	
Structural & Organizational Aspects of Care Delivery		62
Breastfeeding policy includes all 10 model policy elements†	18%	
Breastfeeding policy is effectively communicated	71%	
Facility documents infant feeding rates in patient population	65%	
Facility provides breastfeeding support to employees	59%	
Facility does not receive infant formula free of charge	18%	
Breastfeeding is included in prenatal patient education	69%	
Facility has a designated staff member who coordinates lactation care	47%	

* Scores range from 0 to 100 for each item, dimension of care, facility, and state. The highest, best possible score for each is 100. Each facility and state's "Total Score" is made up of subscores for practices in each of 7 dimensions of care.

** Ranks range from 1 to 53; 1 is the highest rank. In case of a tie, both are given the same rank.

† Key items highlighted on page 1.
