Sources:

Health Insurance data come from Health Insurance Coverage: Early Release of Estimates From the National Health Interview Survey, 2013; 2013 birth data come from *National Vital Statistics Reports*, Vol. 63, No. 2, Supplemental Tables; leading cause of death data, including firearm, homicide, and drug poisoning mortality data, and infant mortality data come from *National Vital Statistics Reports, Vol. 63, No. 9*; and **rankings and rates are based on 2012 age-adjusted death rates.** States are categorized from highest rate to lowest rate. Although adjusted for differences in age-distribution and population size, rankings by state do not take into account other state specific population characteristics that may affect the level of mortality. When the number of deaths is small, rankings by state may be unreliable due to instability in death rates. For more information on age-adjustment, refer to this report. Marriage and divorce data come from unpublished tables from the *Division of Vital Statistics, National Center for Health Statistics, CDC*.
