Preface

Julie L. Gerberding, M.D., M.P.H.
Director, CDC

Each year, CDC works diligently with its partners throughout the United States to promote health and quality of life by preventing and controlling disease, injury, and disability nationally and internationally.

Since 1987, CDC has highlighted its partnerships with state and local health departments and other public and private agencies through the annual *State Health Profiles*. Public health officials and policymakers have used these profiles, which include all 50 states and the District of Columbia, as a snapshot of the nation's health. They have also used them to monitor how federal funds and programs aimed at improving the nation's health are being applied at state and local levels.

The 2002 profiles have been streamlined into one publication that offers easy comparisons among all states. This new format focuses on key information regarding the nation's overall health status, distribution of federal health-care expenditures and services, and CDC's partnerships with the 50 states and the District of Columbia.

CDC's collaborative efforts with partners at the federal, state, and local levels have lead to major public health achievements during the past 100 years, including record low rates for vaccine-preventable diseases, decreases in infant mortality rates, control of infectious diseases, and declines in heart disease and deaths caused by strokes.

By providing meaningful public health information to policymakers and the public through the annual *State Health Profiles*, we strive to continue our efforts to improve the nation's health. We hope you find this publication useful.

CDC's Public Health Partnerships by State and CDC Funds for States

CDC works with state and local health departments, educational institutions, and other private and public organizations to implement CDC's mission of promoting health and quality of life by preventing and controlling disease, injury, and disability. The programs and projects on the following pages are examples of CDC's partnerships throughout the United States during 2001.

Sample of Services Provided by CDC Throughout the United States

Investigations and Emergency Response

- Responded to national and international emergencies, including natural disasters (e.g., hurricanes, earthquakes) and displaced populations.
- Investigated outbreaks of an environmental nature (e.g., foodborne) for disease and clusters of other public health problems.
- Developed an interim communications system to alert state health departments of possible bioterrorism attacks and other health threats through broadcast facsimile and electronic mail.
- Conducted field investigations of possible health hazards in the workplace in response to worker or employer requests.
- Investigated outbreaks of infectious diseases and clusters of other public health problems.
- Assisted states in investigations of suspected bioterrorist events.

Training

- Provided all states with asthma training modules and teleconferences.
- Provided immunization training and education, including continuing education credits, to states through onsite courses, satellite broadcasts, and remote audio, video, and Internet broadcasts.
- Conducted the Tobacco Control Summer Institute to build the capacity of states and communities for implementing state-of-the-art surveillance and intervention.
- Helped states strengthen their public health practice through laboratory, epidemiology, and communications training.
- Funded the West Virginia Training and Demonstration Center for a statewide education and applied research program to improve the health status and reduce injuries of persons in rural West Virginia communities.
- Provided training for state and local partners in bioterrorism laboratory capacity, preparedness planning, emergency response, surveillance, and information technology.

Health Information and Guidelines

- Developed recommendations and guidelines for creating healthy workplaces.
- Developed the CDC Prevention Guidelines Database.
- Developed model language for asthma care that state Medicaid programs can use when contracting with health-care providers (e.g., managed-care organizations).
- Published the *Morbidity and Mortality Weekly Report*, *Recommendations and Reports*, and *CDC Surveillance Summaries*.
- Published *Best Practices to Prevent Violence by Children and Adolescents: A Sourcebook*, a planning guide for communities seeking practical, comprehensive guidance for building violence-prevention programs.
- Provided counter-advertising materials (for television, radio, theater, print, and outdoor paid ads and public service announcements) and technical assistance in media planning and buying to states and nonprofit organizations nationwide through the Media Campaign Resource Center for Tobacco Control.

- Provided training and guidance to state and local health departments, including public health laboratories, for developing comprehensive bioterrorism preparedness and response programs.
- Published health information for international travelers, which is available at http://www.cdc.gov/travel.
- Helped prevent and control human immunodeficiency virus (HIV) infection and acquired immunodeficiency syndrome (AIDS) through education, testing and counseling, and risk-reduction programs.
- Provided materials for a folic acid educational campaign to implement the U.S. Public Health Service recommendation that all women capable of having children consume 400 mg of folic acid daily. Information is available in English or Spanish for two target audiences (i.e., women thinking about pregnancy and women not thinking about pregnancy) and can be ordered by electronic mail at Flo@cdc.gov.
- Provided data that allow states to monitor trends in nutrition problems and risk factors among pregnant women and children at high risk through the Pregnancy Nutrition Surveillance System and the Pediatric Nutrition Surveillance System.
- Sponsored an annual conference for state and local government agency personnel on strengthening school health programs, including HIV/AIDS prevention, for youth.

Technical Assistance and Funding

- Ensured effective immunization services by a) offering programmatic, technical, epidemiologic, and scientific assistance to state and local areas, b) awarding grants to states and large local health departments, and c) providing funds and technical assistance to states for population-based immunization registries.
- Helped establish and improve birth defects monitoring programs, investigate clusters of birth defects, and implement prevention programs for selected birth defects.
- Provided funds for 11 extramural research grants designed to a) measure secondary conditions among specified populations of persons with disabilities; b) determine the risk and protective factors that contribute to or avert the occurrence of secondary conditions; c) conduct and measure the effectiveness of health promotion interventions designed to prevent secondary conditions; and d) understand the prevention effectiveness and cost-effectiveness of interventions.
- Provided testimony to state legislatures and state-based organizations regarding public health interventions to prevent tobacco use and provided recommendations for comprehensive public health approaches.
- Provided technical assistance and funds for development of new electronic information tools to improve public health services.
- Provided technical assistance and consultation to state and local health departments to improve effectiveness through the National Public Health Performance Standards Program.
- Administered the Preventive Health and Health Services Block Grant.
- Administered the Bioterrorism Preparedness and Response Cooperative Agreement.
- Assigned Public Health Advisors/Specialists, Epidemic Intelligence Officers, and Preventive Medicine Residents to state and local health departments.
- Provided financial and technical assistance to 50 states and 6 local health departments through the Epidemiology and Laboratory Capacity Program for infectious disease surveillance and response.
- Provided funds through cooperative agreements and technical assistance to all states and certain cities for tuberculosis screening, prevention, and treatment services.
- Provided funds and technical assistance to all states and the District of Columbia for female breast and cervical cancer screening and follow-up services.
- Provided funds and technical assistance to support nationwide monitoring of cancer incidence through the National Program of Cancer Registries.
- Provided funds and technical assistance for the Pregnancy Risk Assessment Monitoring System (PRAMS), a surveillance system for monitoring selected maternal behaviors and experiences before, during, and after pregnancy.

CDC's Public Health Partnerships with Alabama

- Coordinated state programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded a major injury control research center focusing on acute care, rehabilitation, and prevention at the University of Alabama at Birmingham (UAB).
- Funded UAB to establish a National Academic Center of Excellence on Youth Violence.
- Evaluated potential occupational exposures during aircraft maintenance and inspection in an airplane hangar in Huntsville.
- Funded the Alabama Education and Research Center to provide academic, research, and outreach programs in occupational safety and health.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Alabama has 100% HAN connectivity to local health jurisdictions.
- Funded Alabama's education agencies to support HIV prevention education for young persons.
- Funded the University of Alabama-Birmingham as a regional resource for state and local environmental health programs.
- Assisted Alabama through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Alabama through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Assisted Alabama through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Provided financial and technical assistance to Alabama through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Alabama's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided financial and technical assistance to Alabama's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Alaska

- Provided funds and technical assistance to support the Southcentral Foundation WISEWOMAN (Well Integrated Screening and Evaluation for Women Across the Nation) program. The program provides cholesterol and blood pressure screening services and wellness program activities for low-income, underinsured/uninsured Alaskan Native women aged 40–64 years.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Helped to develop the Fetal Alcohol Syndrome State Network (FASSNet), which uses multiple sources to identify children with fetal alcohol syndrome (FAS) and provide more accurate prevalence data. State officials provide referrals and case management and educate health-care professionals regarding FAS diagnosis and prevention.

- Funded the Alaska Injury Prevention Center to develop a childhood injury prevention program.

- Funded Alaska's efforts to prevent fire-related injuries by increasing the prevalence of residential smoke alarms.

- Initiated a study of air transportation safety among air carrier operators and pilots to develop and assess interventions to reduce crashes.

- Funded the Alaska Marine Safety Education Association to provide marine safety training to commercial fishers.

- Supported the Northwest Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Alaska's education agencies to support HIV prevention education for young persons.

- Assisted Alaska through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Alaska through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Provided financial and technical assistance to Alaska through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Alaska's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Conducted statewide surveillance for invasive pneumococcal disease to document impact of pneumococcal conjugate vaccine on disease incidence and prevalence of drug-resistant strains.

CDC's Public Health Partnerships with Arizona

- Funded Arizona's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped to develop the Fetal Alcohol Syndrome State Network (FASSNet), which uses multiple sources to identify children with fetal alcohol syndrome (FAS) and provide more accurate prevalence data. State officials provide referrals and case management and educate health-care professionals regarding FAS diagnosis and prevention.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded Arizona's health department to strengthen and expand the state's injury prevention and control program.

- Funded three school-based programs working to develop multifaceted bicycle safety programs for adolescents and young adults.

- Funded a graduate program in industrial hygiene, toxicology, and environmental and occupational health at the University of Arizona.

- Evaluated health-care worker glove protection during surgery and the effects of storage, chemicals, and disinfectants on glove integrity.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Arizona's education agencies to support HIV prevention education for young persons.

- Assisted Arizona through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Arizona through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Assisted Arizona through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.

- Provided financial and technical assistance to Arizona through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Arizona's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to Arizona's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Arkansas

- Funded Arkansas' health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Supported a Center for Birth Defects Research and Prevention, which participates in a collaborative study of causes of 30 birth defects and conducts local and regional birth defects research.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded population-based traumatic brain injury (TBI) surveillance to characterize risk factors, incidence, external causes, severity, and short-term outcomes.

- Funded a program to reduce fall- and fire-related injuries and deaths among older adults in group and individual settings.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Arkansas' education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Arkansas through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Assisted Arkansas through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted Arkansas through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.

- Provided technical assistance and oversight at chemical weapons depots during the transportation, open-air testing and destruction of U.S. chemical warfare agents, including training health-care providers.

- Provided financial and technical assistance to Arkansas through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Arkansas' bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to Arkansas' health department for West Nile virus surveillance and enhanced laboratory capacity.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with California

- Funded the state health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.
- Worked with the University of California at Los Angeles on child development research projects focusing on children born into lower socioeconomic circumstances.
- Supported California's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.
- Provided voluntary laboratory performance evaluation programs for HIV and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded two major injury control research centers, the Southern California Injury Prevention Research Center in Los Angeles and the San Francisco Injury Center for Research and Prevention.
- Funded the University of California at San Diego and the University of California at Riverside to establish National Academic Centers of Excellence on Youth Violence.
- Funded a graduate training program in industrial hygiene at the Graduate School of Public Health, San Diego State University.
- Studied musculoskeletal symptoms experienced by vineyard workers.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded California's state education agencies and the Los Angeles, San Bernadino, San Diego, and San Francisco city education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).
- Assisted California through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Provided financial and technical assistance to California through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered California's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

CDC's Public Health Partnerships with Colorado

- Funded Colorado's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped to develop the Fetal Alcohol Syndrome State Network (FASSNet), which uses multiple sources to identify children with fetal alcohol syndrome (FAS) and provide more accurate prevalence data. State officials provide referrals and case management and educate health-care professionals regarding FAS diagnosis and prevention.

- Funded Craig Hospital's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Supported Colorado's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded Colorado's health department to strengthen and expand the state's injury prevention and control program.

- Funded a major injury control research center at Colorado State University for preventing and controling injuries in rural areas.

- Supported the Western Mining Resource Center at Colorado School of Mines to address the research and training needs of Western mining constituencies.

- Funded the High Plains Intermountain Center for Agricultural Health and Safety to address regional agricultural health and safety concerns.

- Supported the Denver Public Health Center, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Colorado's education agencies to support HIV prevention education for young persons.

- Assisted Colorado through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Provided financial and technical assistance to Colorado through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Colorado's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

CDC's Public Health Partnerships with Connecticut

- Funded Connecticut's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Supported Connecticut's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Investigated the death of a male mechanic's assistant, aged 16 years, who was struck by a machine used to grind large volumes of wood.

- Funded Yale University to study isocyanate asthma among autobody workers to diagnose and prevent this occupational disease.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance (ABLES) Program to track and respond to cases of excessive lead exposure.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Connecticut's education agencies to support HIV prevention education for young persons.

- Assisted Connecticut through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Connecticut through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Connecticut's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Assisted state and local public health authorities in investigating the death of a woman aged 94 years from inhalational anthrax.

- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Delaware

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded Delaware's health department to establish a state injury prevention and control program.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Delaware's education agencies to support HIV prevention education for young persons.
- Helped initiate the Comprehensive Approach to Prevent Bloodborne Pathogens program for injection-drug users.
- Assisted Delaware through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Delaware through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Provided financial and technical assistance to Delaware through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Delaware's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.
- Provided financial and technical assistance to Delaware's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with the District of Columbia

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided a field assignee for training and technical assistance related to HIV prevention counseling, resulting in better services to clients.
- Funded the National Research Council to offer scientists and engineers annual postdoctoral research awards in areas such as occupational lung disease and noise-induced hearing loss.
- Funded the International Association of Fire Fighters to implement a national hazardous substance training program for emergency responders.
- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded the District of Columbia education agencies to support HIV prevention education for young persons.
- Assisted the District of Columbia through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Assisted the District of Columbia through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).
- Assisted the District of Columbia through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Assisted the District of Columbia through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Provided financial and technical assistance to the District of Columbia through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered the District of Columbia's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Assisted state and local public health authorities in investigating possible bioterrorism-related anthrax exposures among postal facility employees and persons in impacted areas of U.S. Senate offices.
- Provided financial and technical assistance to the District of Columbia's health department for West Nile virus surveillance and enhanced laboratory capacity; also awarded funds to the Smithsonian Institution for West Nile virus research.

CDC's Public Health Partnerships with Florida

- Funded Florida's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Responded to a reported case of inhalational anthrax in Florida by sending Epidemic Intelligence Service (EIS) Officers within 24 hours.

- Worked with Nova University to conduct a randomized clinical trial for a prepregnancy intervention with women at high risk for an alcohol-exposed pregnancy, as part of Project CHOICES.

- Supported Florida's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded a project to help prevent intimate partner violence by improving identification of couples at risk in community settings.

- Supported a study at the University of Miami to improve ventilation systems to create healthier indoor work environments.

- Supported a study at the University of Miami to determine whether Florida firefighters have excess risk for cancer, compared with the general Florida population.

- Supported the University of Southern Florida's Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Florida's state education agencies and the Broward County, Miami-Dade, Orange County, and Palm Beach County education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Florida through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Assisted Florida through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted Florida through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Provided financial and technical assistance to Florida through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Florida's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Assisted state and local public health authorities in investigating possible bioterrorism-related anthrax exposures at a media company.

- Funded the Lawton and Rhea Chiles Center at the University of South Florida to develop and evaluate a national program for developing high-quality, customer-friendly maternal and child health services.

CDC's Public Health Partnerships with Georgia

- Funded Emory University's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Funded Georgia's efforts to prevent fire-related injuries by increasing the prevalence of smoke alarms among homes at high risk identified for assessment/intervention in targeted communities.

- Funded Georgia's health department to establish a program to prevent dog-bite injuries.

- Funded the University of Georgia to assess the impact of a healthy work organization on employees' health and the company's financial performance.

- Funded Emory University to study ways to prevent neck, shoulder, and upper extremity musculoskeletal disorders among computer users.

- Supported the DeKalb County Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Georgia's education agencies to support HIV prevention education for young persons.

- Assisted Georgia through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Georgia through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Georgia's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Hawaii

- Funded Hawaii's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Funded Hawaii's education agencies to support HIV prevention education for young persons.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded the University of Hawaii at Manoa to establish a National Academic Center of Excellence on Youth Violence.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Hawaii's education agencies to support HIV prevention education for young persons.

- Assisted Hawaii through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Hawaii through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Assisted Hawaii through the CDC/National Heart, Lung, and Blood Institute Lipid Standardization Program, which helps ensure that results from investigative studies are traceable to the National Cholesterol Education Program's analytical and decision criteria for reducing morbidity and mortality from cardiovascular disease.

- Established the Cholesterol Reference Method Laboratory Network to provide certification services to manufacturers when calibrating diagnostic products used for lipid and lipoprotein testing.

- Assisted in developing Hawaii's emergency response plans to identify gaps in capacity, provide training in emergency public health, and conduct exercises to ensure public health readiness.

- Provided financial and technical assistance to Hawaii through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Hawaii's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Confirmed antimicrobial susceptibilities for 79 strains of *Neisseria gonorrhoeae* as part of an ongoing surveillance project to determine the susceptibilities of isolates to fluoroquinolones.

CDC's Public Health Partnerships with Illinois

- Funded Illinois' health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.
- Funded the University of Chicago's project to study health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided a field assignee for training and technical assistance related to HIV prevention counseling, resulting in better services to clients.
- Funded Illinois' health department to strengthen and expand the state's injury prevention and control program.
- Funded violence prevention interventions to respond to the high rates of youth and intimate partner violence.
- Evaluated breathing and skin problems among a facility's printing and bindery department personnel and provided recommendations to improve ventilation systems and personal protective equipment.
- Funded a Community Partners for Healthy Farming project designed to reduce the incidence and severity of work-related eye injuries and illnesses among Latino farmworkers.
- Supported the Illinois Public Health Preparedness Center, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.
- Provided epidemiological support to identify reasons for low immunization levels and implement appropriate interventions to increase coverage in critically underimmunized areas.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Illinois' education agencies to support HIV prevention education for young persons.
- Assisted Illinois through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded the University of Illinois-Chicago as a regional resource for state and local environmental health programs.
- Supported a demonstration project on rodent control in urban areas and the effectiveness of environmental improvements on other diseases and conditions.
- Provided financial and technical assistance to Illinois through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Illinois' bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided financial and technical assistance to Illinois' and Chicago's health departments for West Nile virus surveillance and enhanced laboratory capacity; also awarded funds to the University of Illinois for West Nile virus research.

CDC's Public Health Partnerships with Indiana

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded an interdisciplinary graduate training program at Purdue University's School of Health Sciences.
- Funded a Community Partners for Healthy Farming project at Purdue University to address migrant and seasonal worker concerns through collaboration among researchers and stakeholders.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Indiana's education agencies to support HIV prevention education for young persons.
- Assisted Indiana through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Indiana through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Assisted Indiana through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Assisted Indiana through the CDC/National Heart, Lung, and Blood Institute Lipid Standardization Program, which helps ensure that results from investigative studies are traceable to the National Cholesterol Education Program's analytical and decision criteria for reducing morbidity and mortality from cardiovascular disease.
- Assisted in developing Indiana's emergency response plans to identify gaps in capacity, provide training in emergency public health, and conduct exercises to ensure public health readiness.
- Provided technical assistance and oversight at chemical weapons depots during the transportation, open-air testing and destruction of U.S. chemical warfare agents, including training health-care providers.
- Provided financial and technical assistance to Indiana through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Indiana's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

CDC's Public Health Partnerships with Iowa

- Supported Iowa's Center for Birth Defects Research and Prevention, which participates in a collaborative study of causes of 30 birth defects and conducts local and regional birth defects research.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Funded the University of Iowa's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded the National Program for Playground Safety at the University of Northern Iowa to focus on ways to make playground environments safer for children.

- Funded a school-based injury prevention program to develop a comprehensive injury prevention curriculum for elementary classrooms.

- Funded the University of Iowa to design an automated ventilation system to reduce exposures to contaminants (e.g., dust and ammonia) associated with upper airway inflammation and asthma-like syndrome among swine farmers.

- Funded a University of Iowa study to examine the prevalence of carpal tunnel syndrome among construction apprentices.

- Supported the Iowa Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Iowa's education agencies to support HIV prevention education for young persons.

- Assisted Iowa through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded Iowa's state and local environmental health programs to help ensure effective environmental health practices.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Iowa through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Iowa's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Collaborated with Iowa's health department in an initiative to improve the safety and outcomes of Iowa's health-care delivery system; conducted focus groups and surveys of physicians, pharmacists, and nurses to determine providers' perceptions of patients' safety in the health-care system and strategies to address perceived barriers to providing safe care.

CDC's Public Health Partnerships with Kansas

- Coordinated state programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded Kansas' health department to establish a state injury prevention and control program.
- Funded Kansas' efforts to prevent fire-related injuries by increasing the number of homes with functional smoke alarms.
- Funded Kansas State University to develop and test a local ventilation system using outdoor fresh air to remove dust and contaminants in livestock confinement facilities.
- Supported the Heartland Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Kansas' education agencies to support HIV prevention education for young persons.

CDC's Public Health Partnerships with Kentucky

- Funded Kentucky's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded Kentucky's efforts to prevent residential fire-related injuries and deaths by increasing the prevalence of homes with functional smoke alarms.

- Funded a project to develop an ongoing intimate partner violence (IPV) surveillance system for all reported IPV injuries in the state.

- Funded the University of Kentucky to examine the effect of stress and social support on postpartum levels of anxiety, depression symptoms, and pregnancy outcomes.

- Funded the state-based Sentinel Event Notification System for Occupational Risk (SENSOR) to track and develop interventions for specific occupational diseases.

- Funded the Southeast Center for Agricultural Health and Injury Prevention to address regional agricultural health and safety concerns.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded implementation of tobacco use and control prevention programs.

- Funded Kentucky's state education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Kentucky through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Assisted Kentucky through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

CDC's Public Health Partnerships with Louisiana

- Funded Louisiana's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded Louisiana State University to study how spinal ligaments can contribute to spinal instability, injury, and low back pain during cyclic or prolonged occupational activities.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Louisiana's state education agencies and the New Orleans city education agency to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Louisiana through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Louisiana through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted Louisiana through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Assisted Louisiana through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.

- Provided financial and technical assistance to Louisiana through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

CDC's Public Health Partnerships with Maine

- Funded Maine's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded a program to reduce intimate partner violence among adolescents and women in rural communities.

- Funded the Maine Medical Center to explore limitations of databases available in the majority of states and the complexity or unavailability of software linkage of multiple databases used for injury surveillance.

- Funded the Center for Occupational Health and Safety at Central Maine Technical College to offer an associate degree, a certificate program, and continuing education.

- Supported the University of Maine's study of ways to reduce the likelihood of injury in construction and transportation (e.g., safer walking surfaces and improved work boots).

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Maine's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Maine through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded an ongoing project with the Foundation for Blood Research that will develop a model system for assembling, analyzing, disseminating, and updating existing data regarding the safety and effectiveness of DNA-based genetic tests and testing algorithms.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Maine through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Maine's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with Maryland

- Funded Maryland's program to collect and analyze information on the prevalence of autism and related developmental disabilities.
- Funded John Hopkins University's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Funded a major injury control research center at Johns Hopkins University to address all phases of injury control (e.g., research, education, and implementation of community programs).
- Funded Johns Hopkins University to establish a National Academic Center of Excellence on Youth Violence.
- Funded Johns Hopkins University to examine disability claims data and surveys to assess the impact of occupational injuries and illnesses on Social Security Disability Insurance payments.
- Funded the Pacific Institute for Research and Evaluation to analyze 1987–1997 data from approximately 250,000 companies regarding their annual injury experience.
- Supported the Collaborating Center in Public Health Law, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Maryland has 100% HAN connectivity to local health jurisdictions.
- Helped initiate the Comprehensive Approach to Prevent Bloodborne Pathogens program for injection-drug users.
- Funded Maryland's education agencies to support HIV prevention education for young persons.
- Assisted Maryland through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Provided financial and technical assistance to Maryland through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Maryland's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Massachusetts

- Supported Massachusetts' Center for Birth Defects Research and Prevention, which participates in a collaborative study of causes of 30 birth defects and conducts local and regional birth defects research.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Supported the Assessment Initiative, a cooperative agreement to enhance the ability of state and local public health agencies to use data for policy development and assurance.

- Supported Massachusetts' efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded a major injury control research center at Harvard University to reduce the incidence, severity, or adverse consequences of injury.

- Funded the Harvard Injury Control Research Center to establish a National Academic Center of Excellence on Youth Violence.

- Supported Massachusetts' health department in enhancing a reporting and tracking system for work injuries of youth aged <18 years.

- Funded the University of Massachusetts to study the causes and social and economic consequences of work-related conditions on workers aged >55 years.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Massachusetts' education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Massachusetts through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Massachusetts through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Provided financial and technical assistance to Massachusetts through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Massachusetts' bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with Michigan

- Funded Michigan's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Supported Michigan's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Provided a field assignee for training and technical assistance related to HIV prevention counseling, resulting in better services to clients.

- Funded the University of Michigan to establish a National Academic Center of Excellence on Youth Violence.

- Funded violence prevention projects to reduce domestic violence and prevent violence against women.

- Supported the University of Michigan's study of ways to increase use of hearing protective devices by engineers and construction workers who operate heavy equipment.

- Supported Michigan State University's efforts to link nine federal and local work-related injury and illness databases to evaluate public health and enforcement activities.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Michigan's state education agencies and the Detroit city education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Michigan through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Michigan through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Michigan's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to Michigan's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Minnesota

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Supported the Assessment Initiative, a cooperative agreement to enhance the ability of state and local public health agencies to use data for policy development and assurance.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded Minnesota's health department to strengthen and expand the state's injury prevention and control program.

- Funded population-based traumatic brain injury (TBI) surveillance to characterize the risk factors, incidence, external causes, severity, and short-term outcomes of TBI.

- Supported the University of Minnesota's study of the motivation and incentives for small business owners to develop occupational health and safety programs.

- Funded the University of Minnesota to conduct interviews in Minnesota and four other states to identify agricultural injuries and their causes and consequences.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Funded the University of Minnesota Education and Research Center to provide academic, research, and outreach programs in occupational safety and health.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Minnesota's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Minnesota through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Provided financial and technical assistance to Minnesota through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Minnesota's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Mississippi

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded Mississippi's efforts to prevent residential fire-related injuries and deaths by increasing the prevalence of homes with functional smoke alarms.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Assisted Mississippi through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded Mississippi's education agencies to support HIV prevention education for young persons.
- Assisted Mississippi through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Provided financial and technical assistance to Mississippi through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Mississippi's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.
- Participated in an Epidemic-Aid mission to identify medical practices regarding awareness, diagnosis, and treatment of Rocky Mountain spotted fever.
- Provided financial and technical assistance to Mississippi's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Missouri

- Funded Missouri's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Funded Washington University's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Supported the Assessment Initiative, a cooperative agreement to enhance the ability of state and local public health agencies to use data for policy development and assurance.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded Missouri's health department to establish a comprehensive surveillance system for nonfatal child maltreatment among children aged <10 years.

- Funded Barnes-Jewish Hospital to test traditional medical care versus a multidisciplinary case management approach to reduce work-related musculoskeletal disorders.

- Funded St. Luke's Hospital's study of napping and caffeine as practical interventions for shift workers experiencing disturbed sleep and decreased alertness.

- Supported the Heartland Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Missouri has 100% HAN connectivity to local health jurisdictions.

- Funded Missouri's education agencies to support HIV prevention education for young persons.

- Assisted Missouri through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Missouri through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

CDC's Public Health Partnerships with Montana

- Funded Montana's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Funded the University of Montana's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Supported Montana's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded comprehensive undergraduate and graduate training programs in occupational safety and health and industrial hygiene at the University of Montana, focusing on mining, welding, and oil production safety for engineers.

- Supported the Northwest Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Montana's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Montana through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Missouri through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Assisted Montana through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.

- Provided financial and technical assistance to Montana through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Montana's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

CDC's Public Health Partnerships with Nebraska

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded Nebraska's health department to strengthen and expand the state's injury prevention and control program.
- Funded a collaborative study with Johns Hopkins University (Maryland) to examine private long-term disability claims to assess the impact of occupational injuries and illnesses on Social Security Disability Insurance payments.
- Investigated exposures to ozone during research and development procedures for a new sanitation process for raw beef.
- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Nebraska's education agencies to support HIV prevention education for young persons.
- Assisted Nebraska through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Nebraska through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Provided financial and technical assistance to Nebraska through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Nebraska's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided financial and technical assistance to Nebraska's health department for West Nile virus surveillance and enhanced laboratory capacity.
- Continued National Rotavirus Strain Surveillance System in collaboration with hospital laboratories; this system studies the annual prevalence of rotavirus serotypes.

CDC's Public Health Partnerships with New Hampshire

- Funded New Hampshire's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance (ABLES) Program to track and respond to cases of excessive lead exposure.

- Supported the Center-Collaboratory in Applied Communications Technology for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Assisted New Hampshire through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded New Hampshire's education agencies to support HIV prevention education for young persons.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted New Hampshire through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted New Hampshire through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Provided financial and technical assistance to New Hampshire through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered New Hampshire's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

- Provided financial and technical assistance to New Hampshire's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with New Jersey

- Supported New Jersey's Center for Birth Defects Research and Prevention, which participates in a collaborative study of causes of 30 birth defects and conducts local and regional birth defects research.
- Funded New Jersey's program to collect and analyze information on the prevalence of autism and related developmental disabilities.
- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded population-based traumatic brain injury (TBI) surveillance and prevention programs that address specific causes of TBI and populations at higher risk.
- Conducted an epidemiological investigation of building-related complaints examining volatile organic compounds, stressors, and individual characteristics.
- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.
- Funded the state-based Adult Blood Lead Epidemiology and Surveillance (ABLES) Program to track and respond to cases of excessive lead exposure.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. New Jersey has 100% HAN connectivity to local health jurisdictions.
- Funded New Jersey's education agencies to support HIV prevention education for young persons.
- Assisted New Jersey through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted New Jersey through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).
- Provided financial and technical assistance to New Jersey through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered New Jersey's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Assisted state and local public health authorities in investigating possible bioterrorism-related anthrax among persons working at postal facilities in New Jersey in which letters contaminated with anthrax were processed.

CDC's Public Health Partnerships with New Mexico

- Funded New Mexico's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Coordinated New Mexico's programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded New Mexico's health department to strengthen and expand the state's injury prevention and control program.

- Funded a study to facilitate diagnoses of interstitial lung disease in chest radiographs through a computer-based system for analyzing digital images (Computer-Assisted Chest Radiograph Reader System [CARRS]).

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Funded New Mexico's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Assisted New Mexico through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Established laboratories in New Mexico that have the ability to measure chemical agents in blood and urine as part of an effort to ensure adequate public health laboratory capacity in the event of chemical terrorism.

- Assisted New Mexico through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Provided financial and technical assistance to New Mexico through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered New Mexico's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to New Mexico's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with New York

- Funded New York's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped to develop the Fetal Alcohol Syndrome State Network (FASSNet), which uses multiple sources to identify children with fetal alcohol syndrome (FAS) and provide more accurate prevalence data. State officials provide referrals and case management and educate health-care professionals regarding FAS diagnosis and prevention.

- Provided state-based Epidemic Intelligence Service (EIS) Officers and Preventive Medicine Residents to help the New York City (NYC) health department assess public health consequences after the September 11 terrorist attack. Later provided approximately 75 EIS Officers, Preventive Medicine Residents, and Prevention Specialists to conduct disease surveillance in NYC hospitals.

- Assigned 42 EIS Officers to NYC after identification of a case of anthrax.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded Columbia University to establish a National Academic Center of Excellence on Youth Violence.

- Funded a project to develop an affordable booster seat safety system that meets existing federal standards and provides crash injury protection.

- Supported researchers at the State University of New York at Buffalo to study the effectiveness of active speed controls (e.g., rumble strips and variable message signs) in highway work zones.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Evaluated the impact of disseminating the North American Guidelines for Children's Agricultural Tasks to farm families on the rates of childhood agricultural injury.

- Provided special preparedness training to nurses through the Center for Public Health Preparedness at Columbia University, which then deployed 800 public health nurses to manage NYC emergency shelters after September 11.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices in NYC.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. New York has 100% HAN connectivity to local health jurisdictions.

- Funded New York's education agencies to support school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted New York through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Provided financial and technical assistance to New York through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered New York's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

CDC's Public Health Partnerships with North Carolina

- Funded North Carolina's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Funded the University of North Carolina's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Coordinated North Carolina's programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.

- Provided four Epidemic Intelligence Service (EIS) Officers to North Carolina as part of the investigation of a reported case of inhalational anthrax in Florida.

- Supported North Carolina's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded a major injury prevention research center at the University of North Carolina to focus on injury prevention, acute care, and rehabilitation.

- Funded North Carolina's health department to strengthen and expand the state's injury prevention and control program.

- Evaluated occupational exposure to noise and potential ototoxic agents (e.g., solvents, metals, and asphyxiantsa) among a stock car racing team.

- Funded Wake Forest University's study of strategies for preventing green tobacco sickness among seasonal and migrant farm workers who harvest the majority of U.S. tobacco crops.

- Supported the North Carolina Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded North Carolina's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted North Carolina through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted North Carolina through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Provided financial and technical assistance to North Carolina through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered North Carolina's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

CDC's Public Health Partnerships with North Dakota

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded North Dakota's health department to strengthen and expand the state's injury prevention and control program.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded North Dakota's education agencies to support HIV prevention education for young persons.
- Assisted North Dakota through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Assisted North Dakota through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).
- Assisted North Dakota through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Provided financial and technical assistance to North Dakota through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered North Dakota's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.
- Provided financial and technical assistance to North Dakota's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Ohio

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded Ohio's health department to strengthen and expand the state's injury prevention and control program.
- Funded development of a remote door-entry assistive device for persons with traumatic brain or spinal cord injuries or other disabling conditions.
- Evaluated how exposure to components of load moment (i.e., load magnitude times its distance from the spine) affect occupational low-back pain.
- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.
- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.
- Funded the state-based Sentinel Event Notification System for Occupational Risk (SENSOR) to track and develop interventions for specific occupational diseases.
- Funded the University of Cincinnati Education and Research Center to provide academic, research, and outreach programs in occupational safety and health.
- Supported the University of Findlay Center for Terrorism Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Ohio has 100% HAN connectivity to local health jurisdictions.
- Assisted Ohio through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Ohio through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Assisted Ohio through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Provided financial and technical assistance to Ohio through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Ohio's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with Oklahoma

- Funded Oklahoma's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Funded the HEART of OKC (Healthy, Empowered And Responsible Teens of Oklahoma City), one of 13 community partnership projects nationwide designed to provide a comprehensive approach for teen pregnancy prevention.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded Oklahoma's health department to strengthen and expand the state's injury prevention and control program.

- Funded establishment of the Oklahoma Intimate Partner Violence Surveillance Program within the Injury Prevention Service.

- Funded an industrial hygiene training program at the University of Oklahoma that attracts students from the region.

- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

CDC's Public Health Partnerships with Oregon

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Coordinated Oregon's programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.

- Supported the Assessment Initiative, a cooperative agreement to enhance the ability of state and local public health agencies to use data for policy development and assurance.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Funded implementation of tobacco use and control prevention programs.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded Oregon's health department to strengthen and expand the state's injury prevention and control program.

- Funded a coordinated community response to prevent intimate partner violence.

- Studied the differences in data among state-mandated workers' compensation and private and self-insured companies, to create a common database.

- Funded Oregon Health Sciences University to study male reproductive toxicology and exposure to workplace chemicals.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Supported the Northwest Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Oregon's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Oregon through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.

- Provided financial and technical assistance to Oregon through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Oregon's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Pennsylvania

- Supported Pennsylvania's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded a major injury control research center at the University of Pittsburgh to provide leadership and coordination for statewide injury control efforts.
- Funded the Pennsylvania Coalition Against Rape to establish the National Sexual Violence Resource Center to strengthen the existing support system serving sexual assault survivors.
- Consulted with program leaders regarding integration of Partner Counseling and Referral Services (also called Partner Notification) into existing programs.
- Funded Pennsylvania State University to design, implement, and evaluate the efficacy of a model hearing-conservation program for coal miners.
- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Pennsylvania's education agencies and the Philadelphia city education agencies to support HIV prevention education for young persons.
- Assisted Pennsylvania through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded state and local environmental health programs to help ensure effective environmental health practices.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Pennsylvania through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.
- Assisted Pennsylvania through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Provided financial and technical assistance to Pennsylvania through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Pennsylvania's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided financial and technical assistance to Pennsylvania's and Philadelphia's health departments for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Rhode Island

- Funded Rhode Island's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Coordinated Rhode Island's programs on disability and health, which conduct health promotion interventions, eliminate disparities in access to care and other services, improve state surveillance, and facilitate partnerships with other agencies.

- Supported Rhode Island's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded the state health department to evaluate alternative approaches to surveillance for fatal child maltreatment.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Rhode Island has 100% HAN connectivity to local health jurisdictions.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Funded Rhode Island's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Rhode Island through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Rhode Island through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Provided financial and technical assistance to Rhode Island through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Rhode Island's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with South Carolina

- Funded South Carolina's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Funded South Carolina's program to collect and analyze information on the prevalence of autism and related developmental disabilities.

- Funded the University of South Carolina's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded a Violence Against Women Prevention Research Center at the Medical University of South Carolina.

- Funded prevention of fire-related injuries in residential settings by increasing correct smoke alarm use and public awareness of fire safety.

- Funded the University of South Carolina to provide graduate training in industrial hygiene.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded South Carolina's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted South Carolina through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Assisted South Carolina through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted South Carolina through the Blood Lead Laboratory Reference System, which is a CDC standardization program designed to improve the overall quality of laboratory measurements of blood lead in support of childhood lead screening and occupational health and safety programs.

- Provided financial and technical assistance to South Carolina through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered South Carolina's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with South Dakota

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Investigated events that led to the death of one volunteer firefighter and injuries to another who were responding to a wildland fire.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded South Dakota's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted South Dakota through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Assisted South Dakota through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).

- Assisted South Dakota through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.

- Provided financial and technical assistance to South Dakota through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered South Dakota's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

- Provided financial and technical assistance to South Dakota's health department for West Nile virus surveillance and enhanced laboratory capacity.

- Provided telephone consultation regarding management of disease outbreaks associated with recreational water use.

CDC's Public Health Partnerships with Tennessee

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded examination of immediate and long-term impacts of interparental violence on child adjustment for children of different ages.
- Funded a statewide, safety-practices training program for nursing home staff to test whether the program reduces falls resulting in serious injuries.
- Provided technical assistance to help train state health-care providers on HIV prevention counseling.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Tennessee's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).
- Assisted Tennessee through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Supported the Environmental Health Specialist Network (EHS-Net), a collaborative arrangement with CDC's FoodNet program and the Food and Drug Administration to collect data regarding environmental conditions at food establishments that could contribute to foodborne illnesses.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted Tennessee through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).
- Assisted Tennessee through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Assisted Tennessee through the CDC/National Heart, Lung, and Blood Institute Lipid Standardization Program, which helps ensure that results from investigative studies are traceable to the National Cholesterol Education Program's analytical and decision criteria for reducing morbidity and mortality from cardiovascular disease.
- Provided financial and technical assistance to Tennessee through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Tennessee's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided funds and technical assistance for the Emerging Infections Program, a population-based network of partners who assess the public health impact of emerging infections and evaluate prevention and control methods.

CDC's Public Health Partnerships with Texas

- Supported Texas' Center for Birth Defects Research and Prevention, which participates in a collaborative study of causes of 30 birth defects and conducts local and regional birth defects research.

- Worked with the state to conduct a randomized clinical trial for a prepregnancy intervention with women at high risk for an alcohol-exposed pregnancy, as part of Project CHOICES.

- Funded Baylor University's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Supported Texas' efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded a science-based study of sexual and intimate partner violence among Mexican-American adolescent females at high risk.

- Funded a violence prevention intervention to evaluate the relationship of poverty and welfare reform on violent victimization of women.

- Funded the University of Texas' study of the health of migrant farm workers and their families through work diaries and tracking of the children's school progress.

- Funded the state-based Sentinel Event Notification System for Occupational Risk (SENSOR) to track and develop interventions for specific occupational diseases.

- Funded the Southwest Center for Occupational and Environmental Health to provide academic, research, and outreach programs in occupational safety and health and to address regional agricultural health and safety concerns.

- Provided epidemiological support to identify reasons for low immunization levels and implement appropriate interventions to increase coverage in critically underimmunized areas.

- Supported immunization registry sentinel site efforts to monitor vaccine use patterns and immunization practices.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Texas has 100% HAN connectivity to local health jurisdictions.

- Funded Texas' education agencies to support HIV prevention education for young persons.

- Assisted Texas through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded an ongoing project with the University of Texas to examine gene-environment interactions related to cardiovascular disease using stored DNA from the multicenter Atherosclerosis Risk in Communities (ARIC) Study.

- Provided financial and technical assistance to Texas through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Texas' bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to Texas' and Houston's health departments for West Nile virus surveillance and enhanced laboratory capacity; also awarded funds to the University of Texas for West Nile virus research.

CDC's Public Health Partnerships with Vermont

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded a cooperative effort to develop or strengthen the state's injury prevention and control program.

- Funded the University of Vermont and State Agricultural College to identify ways to reduce injury and reinjury rates, improve work performance, and increase productivity of injured workers.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded Vermont's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Assisted Vermont through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Vermont through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Vermont's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

- Assisted Vermont in investigating the first case of hantavirus pulmonary syndrome and the rodents associated with the infection.

CDC's Public Health Partnerships with Virginia

- Worked with Virginia Commonwealth University to conduct a randomized clinical trial for a prepregnancy intervention with women at high risk for an alcohol-exposed pregnancy, as part of Project CHOICES.
- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded Virginia Commonwealth University to establish a National Academic Center of Excellence on Youth Violence.
- Funded state efforts to prevent fire-related deaths and injuries by increasing prevalence of smoke alarms in targeted communities.
- Supported two graduate programs in safety engineering at Virginia Polytechnic Institute and State University.
- Funded a study with the Virginia Polytechnic Institute to reduce the economic and medical costs associated with workplace injuries of older workers.
- Evaluated events leading to the death of one firefighter and injury of another while they were responding to a gas leak at a residence.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded Virginia's education agencies to support HIV prevention education for young persons.
- Assisted Virginia through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Established laboratories in Virginia that have the ability to measure chemical agents in blood and urine as part of an effort to ensure adequate public health laboratory capacity in the event of chemical terrorism.
- Assisted Virginia through biomonitoring support, which includes assessing exposure to toxic substances by the laboratory measurement of environmental toxicants in biological samples (e.g., blood, urine, saliva).
- Provided financial and technical assistance to Virginia through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered Virginia's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Provided DPDx (a website for parasitology diagnostics) for easy access to parasite identification information and exchange of digital images of diagnostic specimens among laboratories.

CDC's Public Health Partnerships with Washington

- Funded Washington's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped develop a program for tracking children who screen positive for hearing loss to evaluate whether follow-up diagnostic and intervention services are provided and what the impact of the services are.

- Funded the University of Washington's study of health conditions of persons with disabilities, identify health risks and protective factors, and measure the effectiveness of health promotion activities for preventing adverse conditions among this population.

- Supported Washington's efforts to develop and implement nutrition and physical activity interventions, including population-based strategies to prevent and control obesity and related chronic diseases.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Funded a major injury control research center at Harborview Medical Center to broaden the effectiveness of the Northwest region's injury prevention and treatment programs.

- Funded Washington's health department to strengthen and expand the state's injury prevention and control program.

- Studied ways to improve data quality in pesticide illness surveillance to help formulate and implement more effective intervention efforts to protect state workers.

- Evaluated the degradation characteristics of medical gloves (e.g., glove choice, expiration date, labeling and storage instructions, minimum performance standards, and premarket protocols for validating new glove designs).

- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.

- Supported the Northwest Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism. Washington has 100% HAN connectivity to local health jurisdictions.

- Funded Washington's education agencies and the Seattle city education agencies to support HIV prevention education for young persons.

- Assisted Washington through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded state and local environmental health programs to help ensure effective environmental health practices.

- Funded an ongoing study that seeks to test the stored newborn screening samples of children aged 4 years to examine genetic markers associated with risk for developing juvenile diabetes.

- Provided financial and technical assistance to Washington through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Washington's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

CDC's Public Health Partnerships with West Virginia

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.
- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.
- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.
- Funded implementation of tobacco use and control prevention programs.
- Funded an injury control and demonstration center to plan, direct, and coordinate a statewide program of training and applied research to improve the health of persons in rural communities.
- Funded West Virginia's health department to establish a state injury prevention and control program.
- Funded an undergraduate and graduate training program in industrial engineering at West Virginia University (WVU).
- Funded programs at WVU, including residencies in occupational medicine, training in occupational safety, and outreach projects for workers and businesses.
- Funded the state-based Fatality Assessment and Control Evaluation (FACE) Program that formulates prevention strategies for work situations with a high risk for fatality.
- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.
- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.
- Funded West Virginia's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).
- Assisted West Virginia through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.
- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.
- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).
- Assisted West Virginia through the Newborn Screening Quality Assurance Program (NSQAP), which provides dried blood-spot quality control materials, performance evaluation services, and technical support to all domestic screening laboratories.
- Provided financial and technical assistance to West Virginia through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.
- Bolstered West Virginia's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.
- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

CDC's Public Health Partnerships with Wisconsin

- Funded Wisconsin's health department to improve timely reporting of major birth defects, improve access to care for children with birth defects, develop activities to prevent spina bifida and anencephaly, and encourage surveillance for prenatally diagnosed birth defects.

- Helped to develop the Fetal Alcohol Syndrome State Network (FASSNet), which uses multiple sources to identify children with fetal alcohol syndrome (FAS) and provide more accurate prevalence data. State officials provide referrals and case management and educate health-care professionals regarding FAS diagnosis and prevention.

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Funded a major injury control and research center at the Medical College of Wisconsin to address the burden of injury in the Great Lakes Region of the Midwest.

- Funded Wisconsin's health department to strengthen and expand the state's injury prevention and control program.

- Funded the National Children's Center for Rural and Agricultural Health and Safety to provide guidance, technical assistance, and training on childhood injury prevention.

- Supported a graduate program in risk control, with a focus in safety engineering, industrial hygiene, and managerial research at the University of Wisconsin-Stout.

- Funded a study to determine whether youths who have obtained work permits are less likely to experience a work-related injury.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Funded Wisconsin's education agencies to support HIV prevention education for young persons and school health programs to reduce chronic disease risk factors (e.g., tobacco use, substandard eating habits, physical activity, and obesity).

- Assisted Wisconsin through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded a national asthma control program that tracks the disease, ensures that scientifically based intervention programs are broadly implemented, and helps partners develop, implement, and evaluate programs.

- Funded state and local environmental health programs to help ensure effective environmental health practices.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Provided financial and technical assistance to Wisonsin through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Wisconsin's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Provided financial and technical assistance to Wisconsin's health department for West Nile virus surveillance and enhanced laboratory capacity.

CDC's Public Health Partnerships with Wyoming

- Provided voluntary laboratory performance evaluation programs for human immunodeficiency virus (HIV) and multidrug-resistant tuberculosis testing.

- Provided resources and technical assistance to HIV prevention programs through state and local public health departments and community-based organizations.

- Provided free breast and cervical cancer screening and diagnostic services to uninsured/underinsured, low-income women through the National Breast and Cervical Cancer Early Detection Program.

- Funded implementation of tobacco use and control prevention programs.

- Supported the Health Alert Network (HAN), a nationwide health communications system that provides rapid, secure access to information to help health officials immediately respond to possible bioterrorism.

- Funded the state-based Adult Blood Lead Epidemiology and Surveillance Program (ABLES) to track and respond to cases of excessive lead exposure.

- Supported the Northwest Center for Public Health Preparedness, which helps ensure that state and local public health systems and health-care workers can respond to health threats, including terrorism or bioterrorism.

- Funded a national rape prevention and education program to increase awareness of or help prevent sexual assault.

- Funded Wyoming's education agencies to support HIV prevention education for young persons.

- Assisted Wyoming through the Vital Statistics Cooperative Program in collecting birth and death data, which are an essential foundation for public health policy and programs.

- Funded cooperative agreements with state and local health departments for preventing childhood exposure to lead hazards (primary prevention), screening of children at high risk (secondary prevention), and referral of those identified with elevated blood lead levels (BLL).

- Assisted Wyoming through the CDC/National Heart, Lung, and Blood Institute Lipid Standardization Program, which helps ensure that results from investigative studies are traceable to the National Cholesterol Education Program's analytical and decision criteria for reducing morbidity and mortality from cardiovascular disease.

- Established the Cholesterol Reference Method Laboratory Network to provide certification services to manufacturers when calibrating diagnostic products used for lipid and lipoprotein testing.

- Provided financial and technical assistance to Wyoming through the Epidemiology and Laboratory Capacity (ELC) program to strengthen public health capacity for infectious disease surveillance and response.

- Bolstered Wyoming's bioterrorism preparedness and response through financial and technical assistance to enhance epidemiology and surveillance capacity, laboratory capacity for testing biologic and chemical agents, and HAN.

- Funded a cooperative agreement for hepatitis C coordination activities for integrating viral hepatitis counseling, testing, referral, surveillance, and vaccination into existing public health programs.

- Provided epidemiologic and laboratory diagnostic assistance in the investigation of an outbreak of Q fever.

- Provided financial and technical assistance to Wyoming's health department for West Nile virus surveillance and enhanced laboratory capacity.

Tables and Maps

CDC and other agencies under the U.S. Department of Health and Human Services use multiple data sources to plan and operate public health programs that are designed to deliver services to those with the greatest health needs. The following tables and maps illustrate leading health indicators and the disparities among states and races/ethnicities.

Years of Potential Life Lost (YPLL) Before Age 75 Years by Race and Ethnicity—1997–1999

	White non-Hispanic	Black non-Hispanic	American Indian/ Alaska Native	Asian/ Pacific Islanders	Hispanic	All races
United States	7,045	14,217	9,723	4,052	6,372	7,825
Alabama	8,678	14,802	7,058	2,631	5,289	10,111
Alaska	6,479	7,816	15,526	5,677	5,730	7,762
Arizona	7,412	13,232	15,472	3,897	8,265	8,311
Arkansas	8,966	15,426	4,354	5,676	4,180	9,774
California	6,923	13,461	5,164	4,130	5,754	6,858
Colorado	6,308	12,017	8,531	3,325	7,862	6,717
Connecticut	5,966	12,647	5,003	2,648	7,633	6,726

Note: Age-adjusted YPLL before age 75 years/100,000 population.
*Rate is based on <20 deaths and is considered unreliable.
Source: National Vital Statistics System, National Center for Health Statistics, CDC.

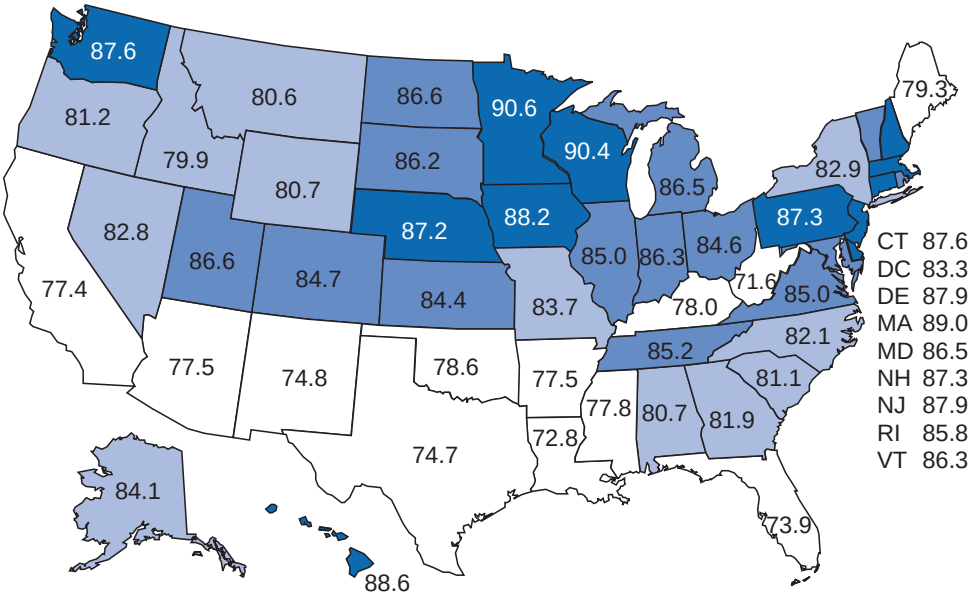
Access to Health Care, 2000



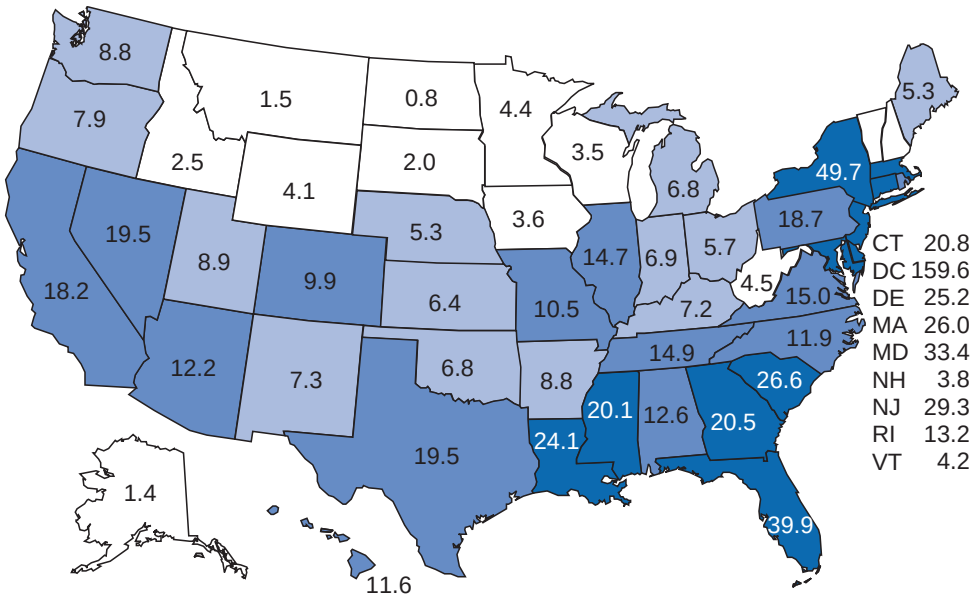
Age-adjusted percentage of persons aged 18–64 years who report having health-care coverage

71.6–79.8 | 79.9–84.3 | 84.4–86.6 | 86.7–90.6

United States rate: 82.1; *Healthy People 2010* target: 100

Source: Behavioral Risk Factor Surveillance System, CDC.

Acquired Immunodeficiency Syndrome (AIDS), 1999



Rates per 100,000 population of AIDS cases reported among persons aged ≥13 years

0.8–4.5 | 4.6–8.9 | 9.0–19.5 | 19.6–159.6

United States rate: 19.5; *Healthy People 2010* target: 1.0

Source: HIV/AIDS Surveillance System, CDC.

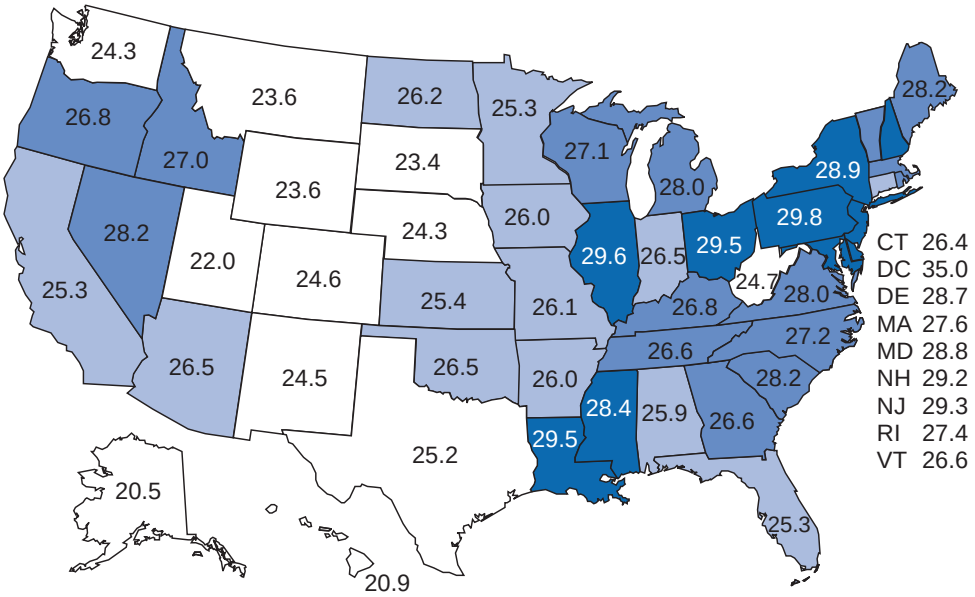
Breast Cancer Deaths, 1999



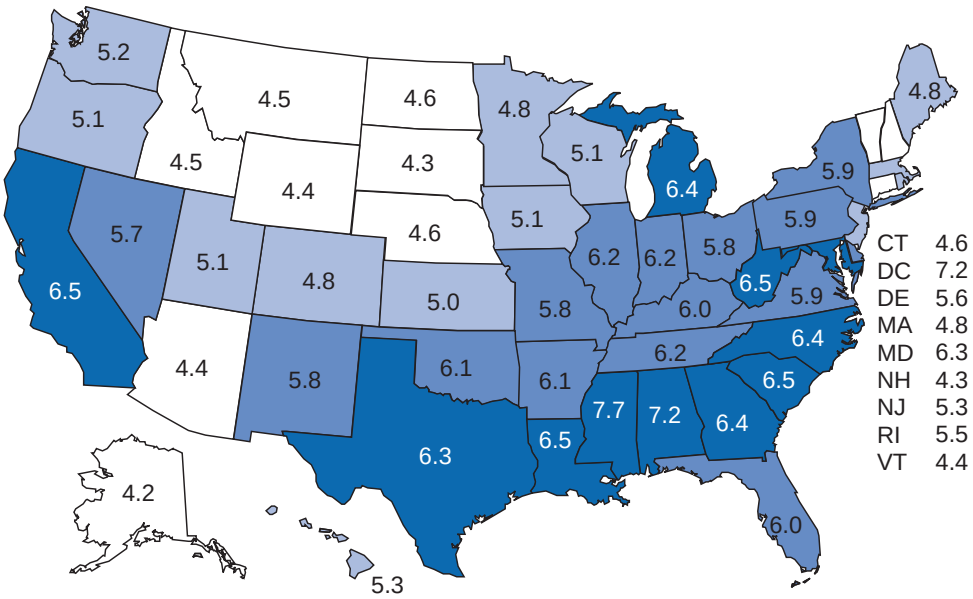
Age-adjusted death rates per 100,000 female population

20.5–25.2 | 25.3–26.5 | 26.6–28.2 | 28.3–35.0

United States rate: 27.0; *Healthy People 2010* target: 22.3

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Diabetes Among Adults, 1998–2000



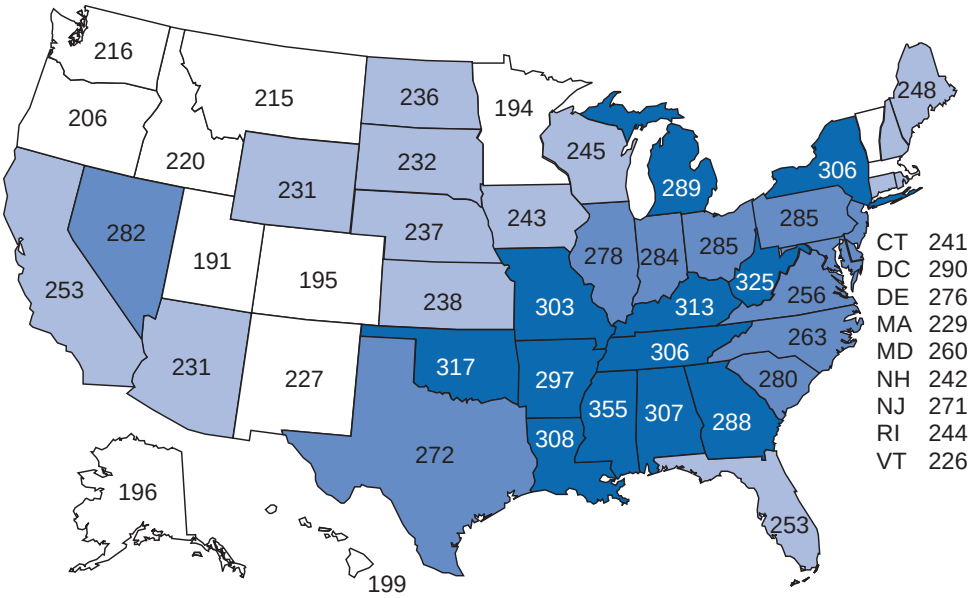
Age-adjusted average prevalence (percentage) per 100 population of adults aged ≥18 years

4.2–4.6 | 4.7–5.5 | 5.6–6.2 | 6.3–7.7

United States rate: 5.9; *Healthy People 2010* target: Not available*

**Healthy People 2010* target for all age groups is 2.5.
Source: Behavioral Risk Factor Surveillance System, CDC.

Heart Disease-Related Deaths, 1999



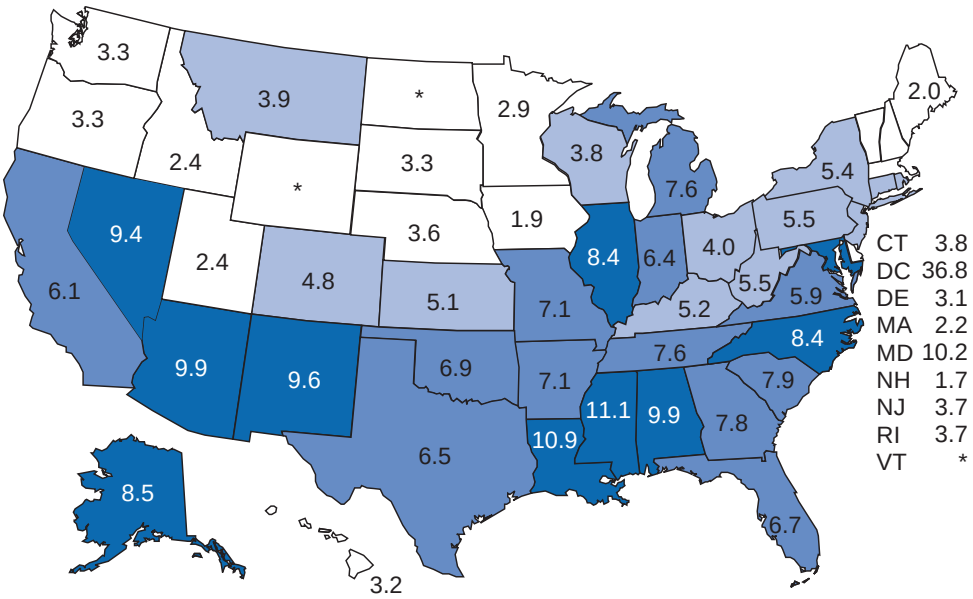
Age-adjusted death rates per 100,000 population

190–229 | 230–253 | 254–285 | 286–355

United States rate: 268; *Healthy People 2010* target: 166

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Homicide, 1999



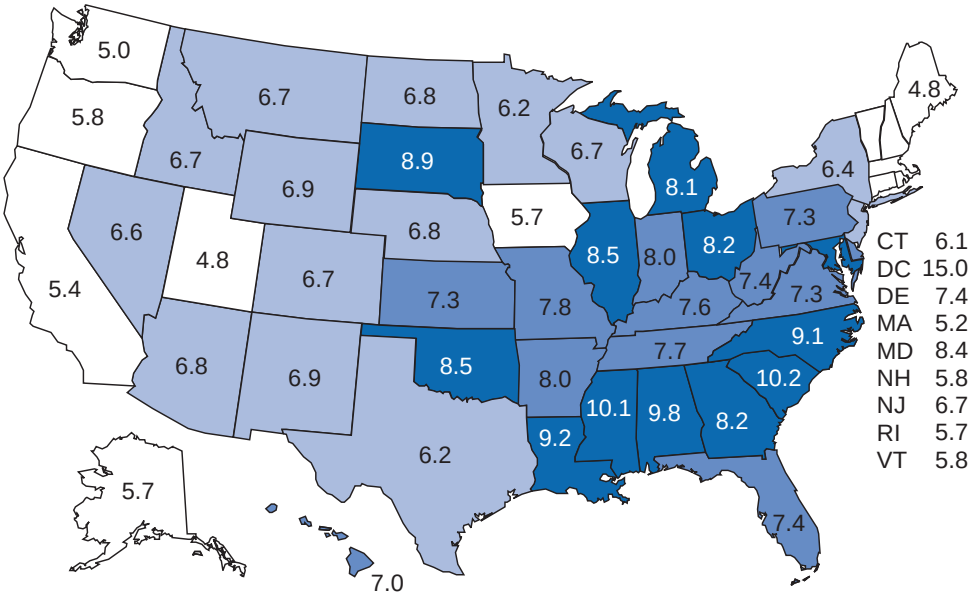
Age-adjusted rates per 100,000 population

1.7–3.6 | 3.7–5.5 | 5.6–7.9 | 8.0–36.8

United States rate: 6.2; *Healthy People 2010* target: 3.0

*Data not available.
Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Infant Mortality, 1999



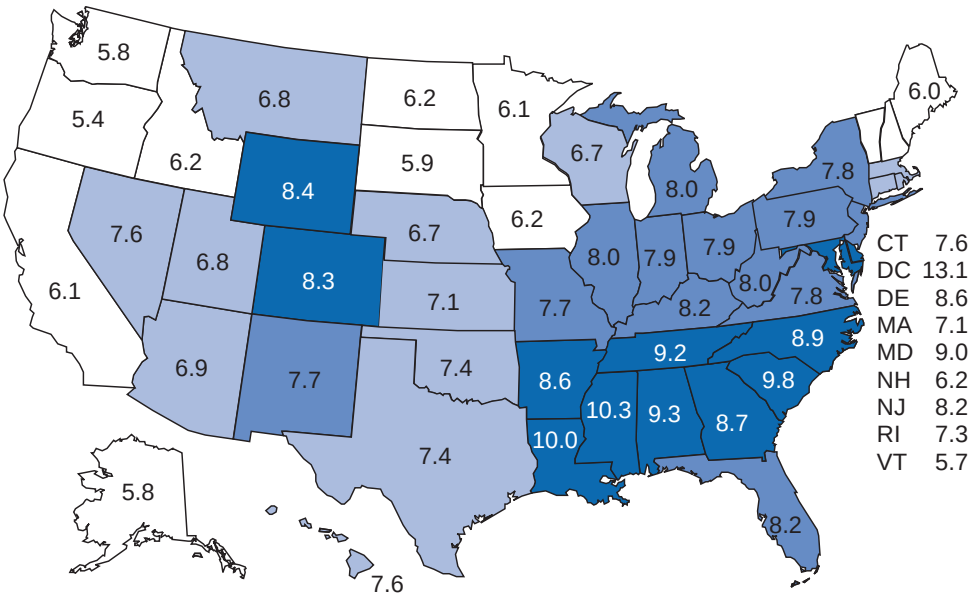
Infant death rates per 1,000 live births

4.8–6.1 | 6.2–6.9 | 7.0–8.0 | 8.1–15.0

United States rate: 7.1; *Healthy People 2010* target: 4.5

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Low Birth Weight, 1999



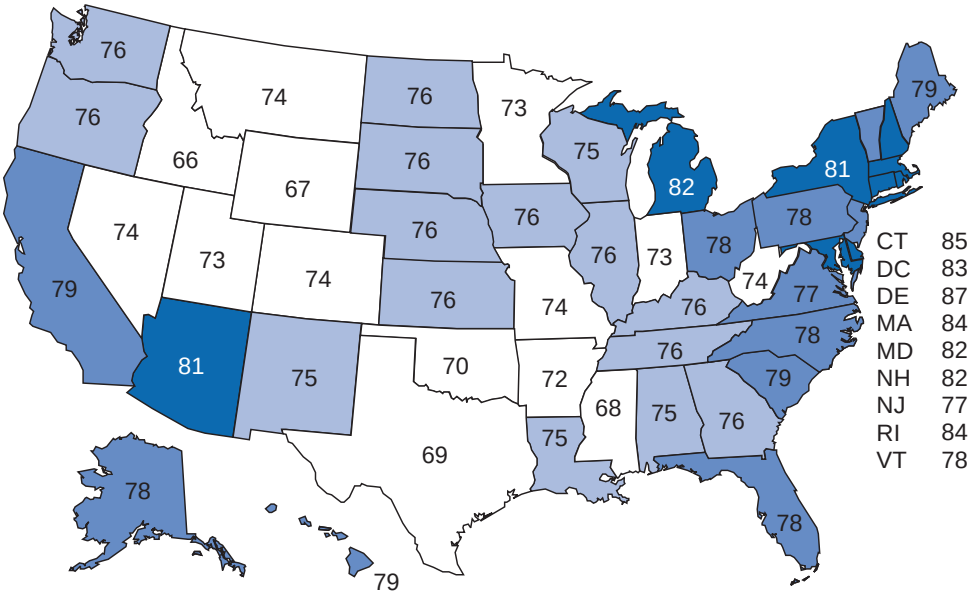
Percentage of live births with birth weight <2,500 g

5.4–6.6 | 6.7–7.6 | 7.7–8.2 | 8.3–13.1

United States rate: 7.6; *Healthy People 2010* target: 5.0

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Mammograms, 2000



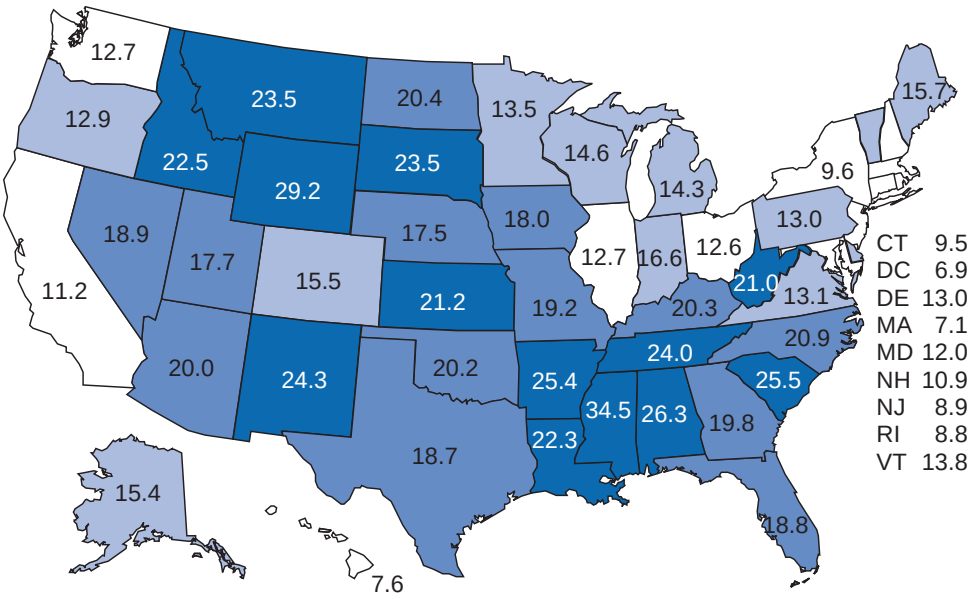
Age-adjusted percentage of women aged ≥40 years who reported receiving a mammogram within the past 2 years

66–74 | 75–76 | 77–79 | 80–87

United States rate: 77; *Healthy People 2010* target: 70

Source: Behavioral Risk Factor Surveillance System, CDC.

Motor Vehicle-Related Deaths, 1999



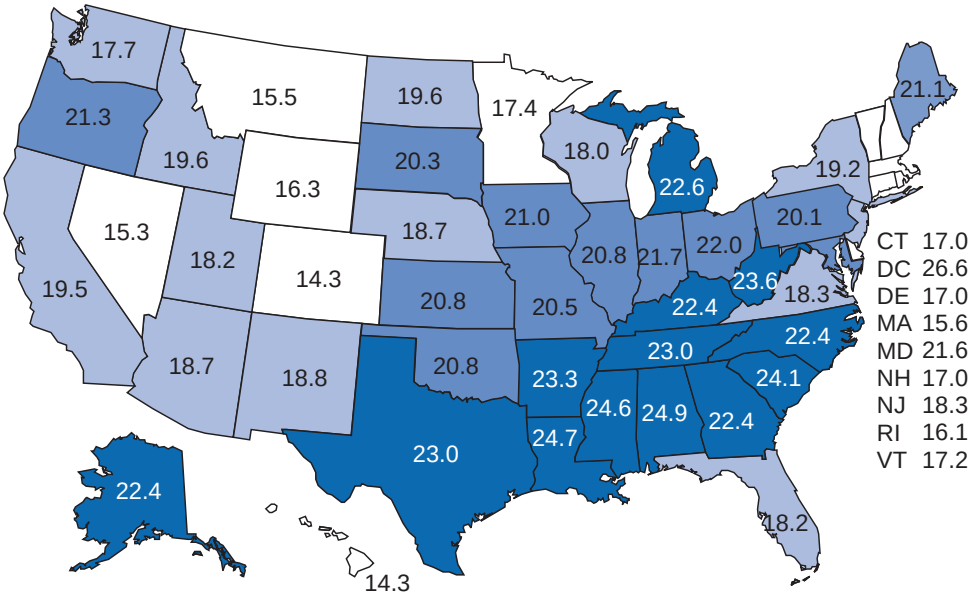
Age-adjusted death rates per 100,000 population

6.9–12.7 | 12.8–17.0 | 17.1–20.9 | 21.0–34.5

United States rate: 15.5; *Healthy People 2010* target: 9.2

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Obesity Among Adults, 1999



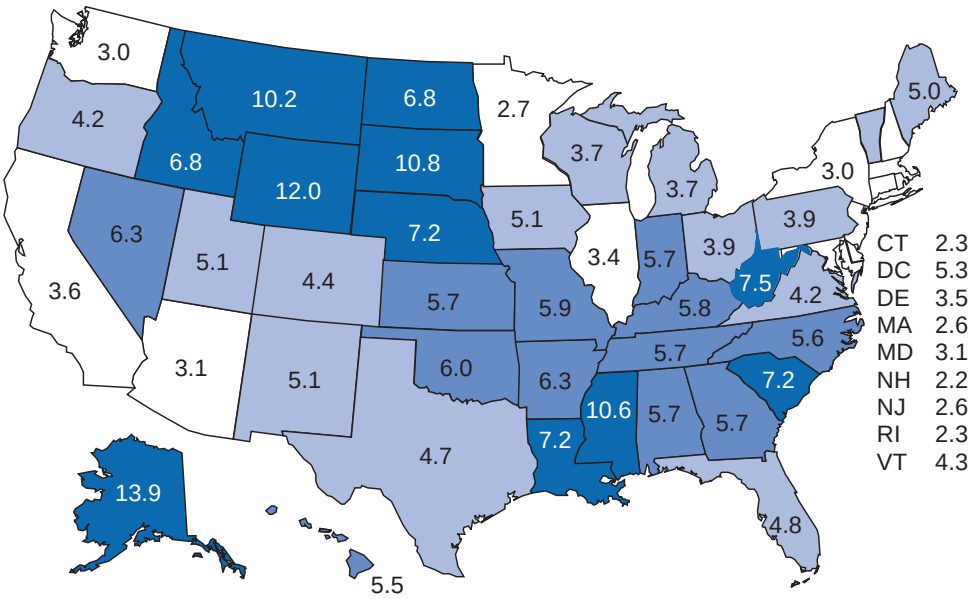
Percentage of persons aged ≥20 years with a body mass index of ≥30.0

14.3–17.6 | 17.7–19.8 | 19.9–22.0 | 22.1–26.6

United States rate: 20.3; *Healthy People 2010* target: 15.0

Source: Behavioral Risk Factor Surveillance System, CDC.

Occupational Fatalities, 1999



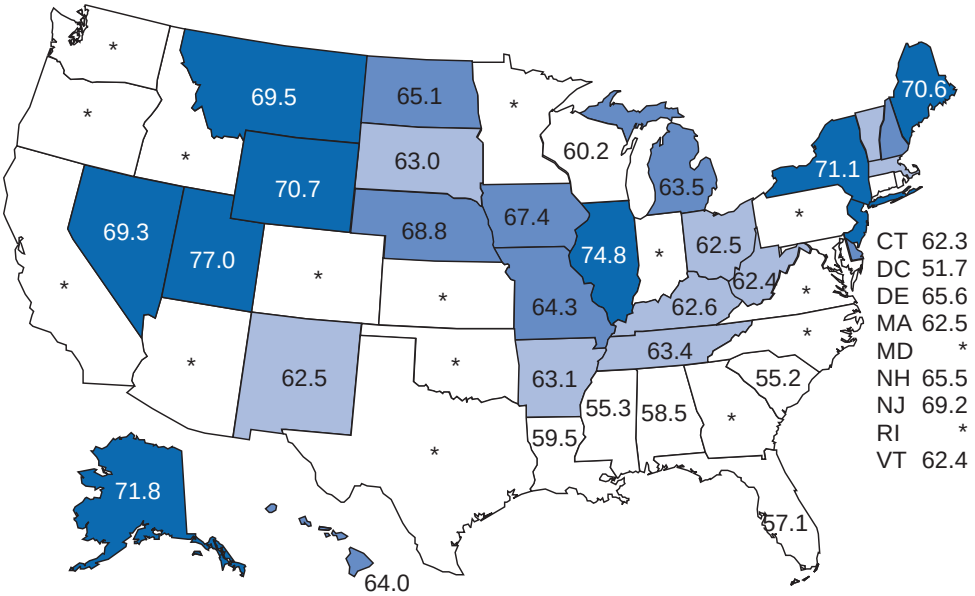
Death rates per 100,000 workers aged ≥16 years

2.2–3.6 | 3.7–5.1 | 5.2–6.3 | 6.4–13.9

United States rate: 5.4; *Healthy People 2010* target: 3.2

Source: Census of Fatal Occupational Injuries, Bureau of Labor Statistics, Department of Labor.

Regular Physical Activity Among Adolescents, 1999



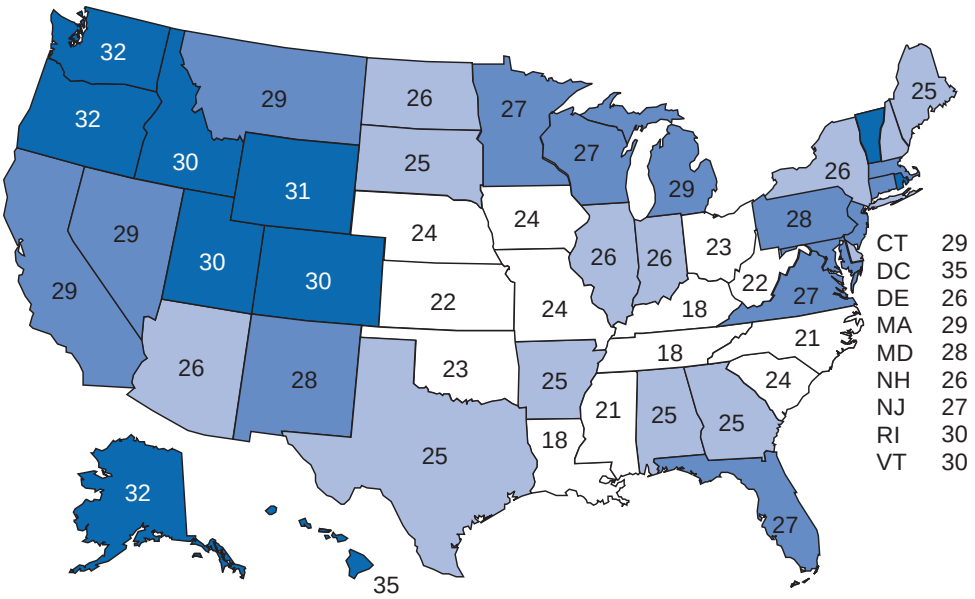
Percentage of students in grades 9–12 who reported participating in regular physical activity

51.7–62.3 | 62.4–63.4 | 63.5–68.8 | 68.9–77.0

United States rate: 65.0; *Healthy People 2010* target: 85.0

*Data not available
Source: Youth Risk Behavior Surveillance System, CDC.

Regular Physical Activity Among Adults, 1999



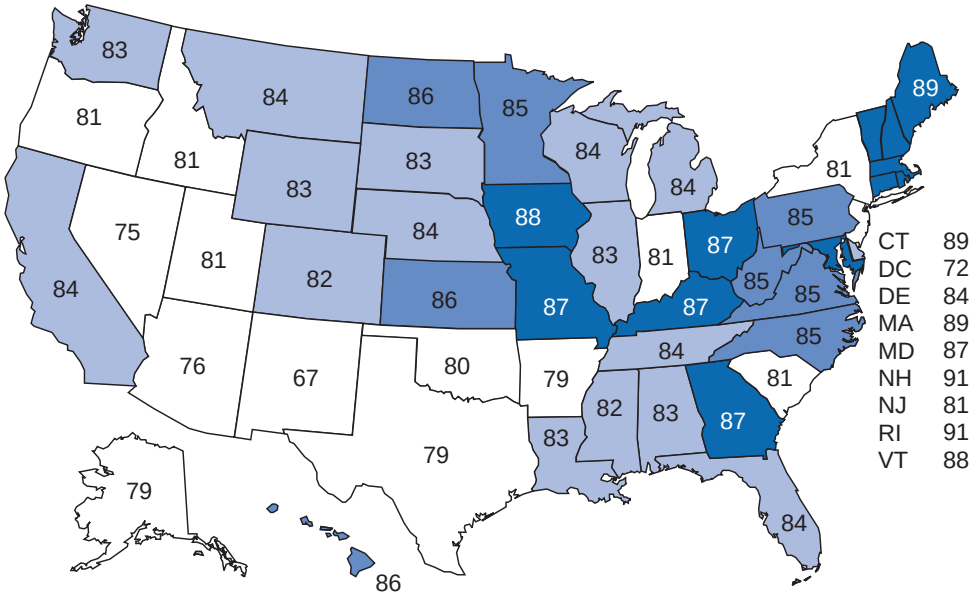
Age-adjusted percentage of adults aged ≥18 who report light or moderate physical activity

18–24 | 25–26 | 27–29 | 30–35

United States rate: 26; *Healthy People 2010* target: 30

Source: Behavioral Risk Factor Surveillance System, CDC.

Prenatal Care, 1999



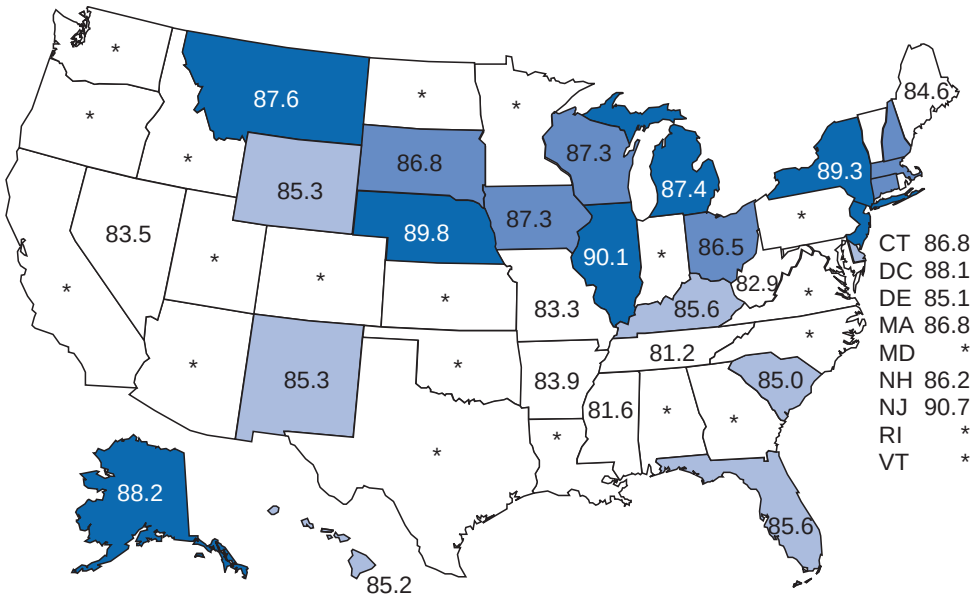
Percentage of live births to females receiving prenatal care in the first trimester of pregnancy

67–81 | 82–84 | 85–86 | 87–91

United States rate: 83; *Healthy People 2010* target: 90

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Responsible Sexual Behavior, 1999



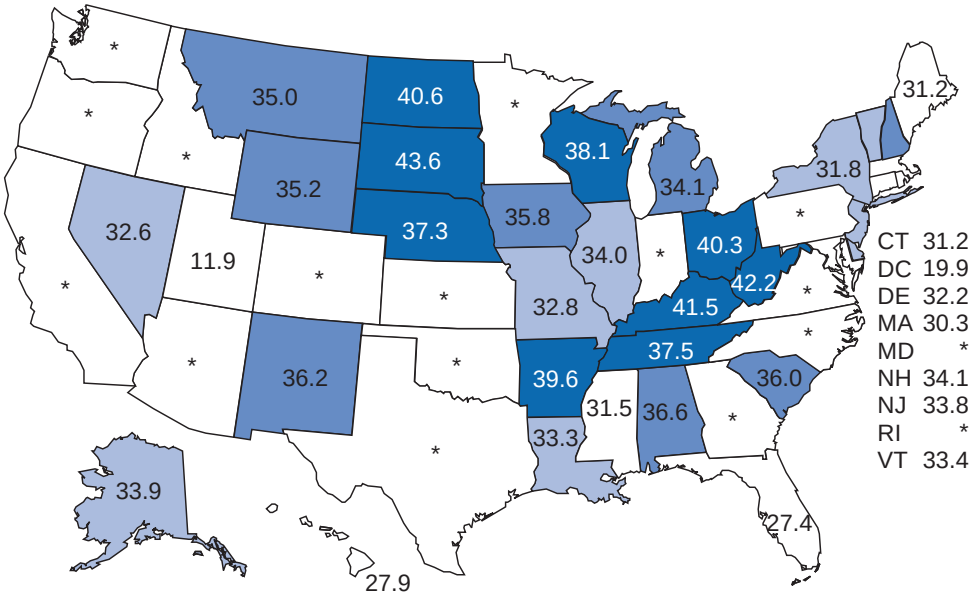
Percentage of students in grades 9–12 who were sexually responsible

81.2–84.6 | 84.7–85.6 | 85.7–87.3 | 87.4–90.7

United States rate: 85.0; *Healthy People 2010* target: 95.0

*Data not available.
Source: Youth Risk Behavior Surveillance, CDC.

Smoking Among Adolescents, 1999



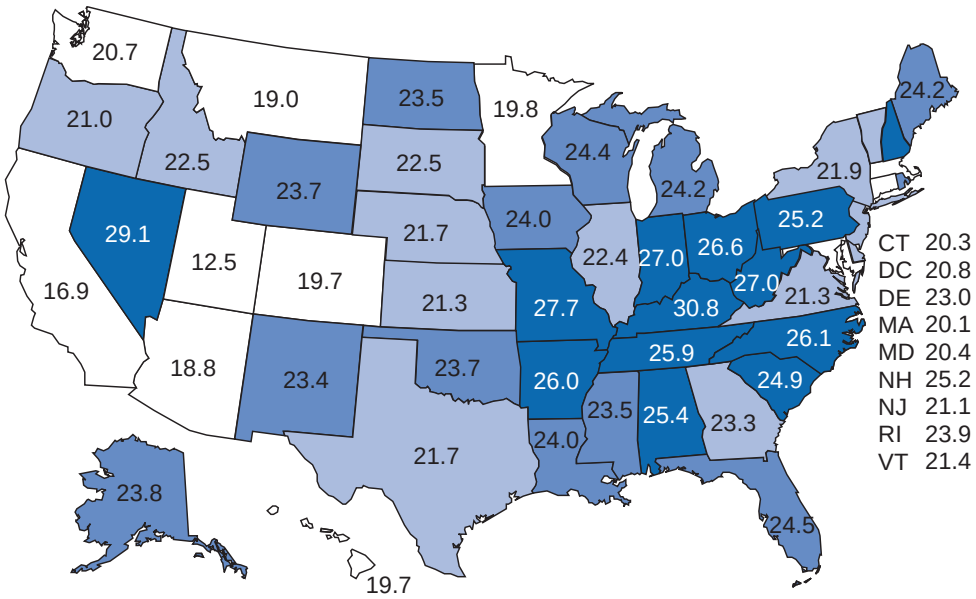
Percentage of students in grades 9–12 who smoked one or more cigarettes in the past 30 days

11.9–31.5 | 31.6–34.0 | 34.1–36.6 | 36.7–43.6

United States rate: 35.0; *Healthy People 2010* target: 16.0

*Data not available.
Source: Youth Risk Behavior Surveillance System, CDC.

Smoking Among Adults, 2000



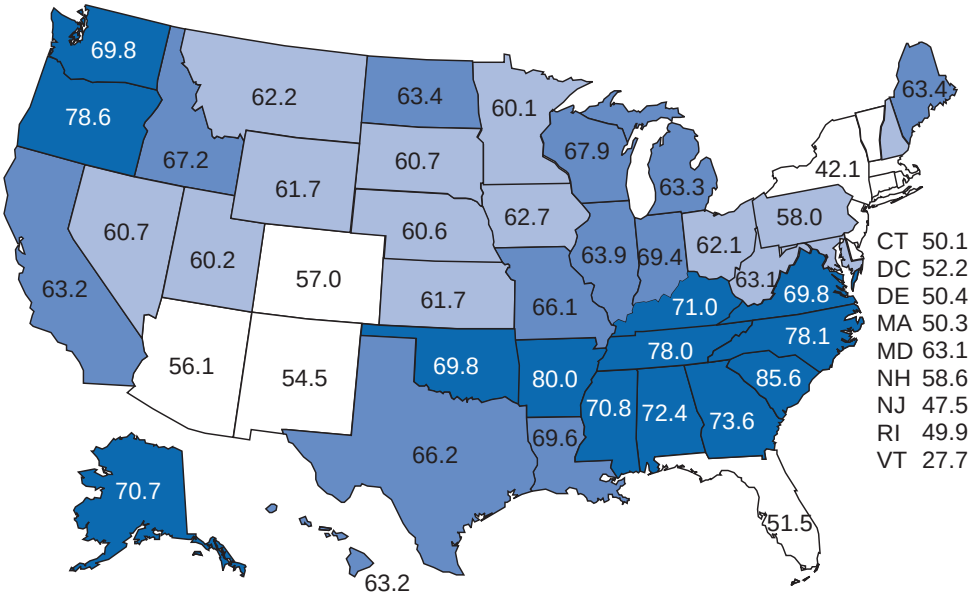
Percentage of adults aged ≥18 years who have smoked ≥200 cigarettes during their lifetime and who now report smoking cigarettes regularly

12.5– 20.9 | 21.0– 23.3 | 23.4– 24.6 | 24.7– 30.8

United States rate: 22.5; *Healthy People 2010* target: 12.0

Source: Behavioral Risk Factor Surveillance System, CDC.

Stroke Deaths, 1999



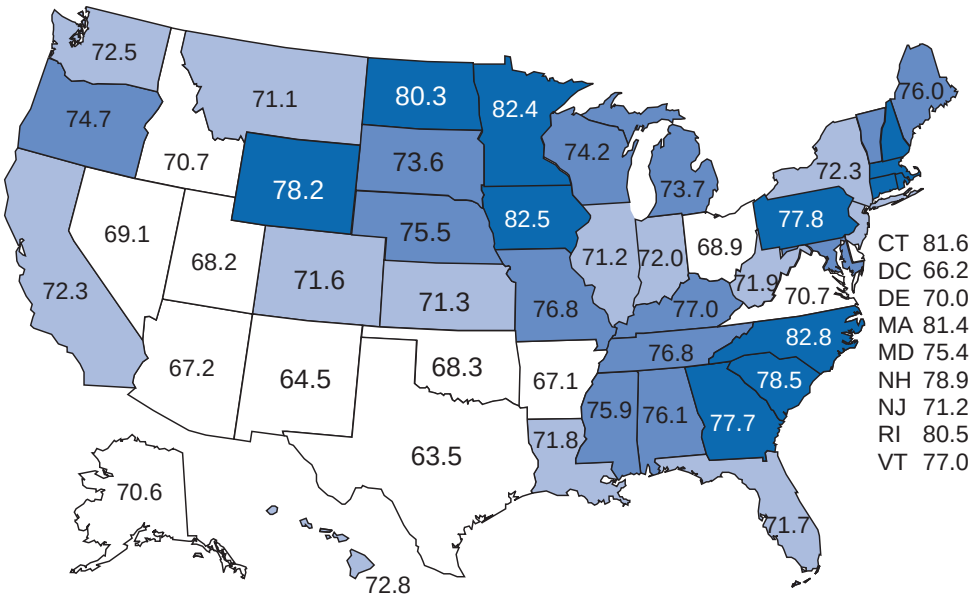
Age-adjusted death rates per 100,000 population

27.7–57.7 | 57.8–63.1 | 63.2–69.6 | 69.7–85.6

United States rate: 61.4; *Healthy People 2010* target: 48

Source: National Vital Statistics System, National Center for Health Statistics, CDC.

Vaccination Coverage Among Children, 2000



Percentage of children aged 19–35 months who received the recommended vaccines*

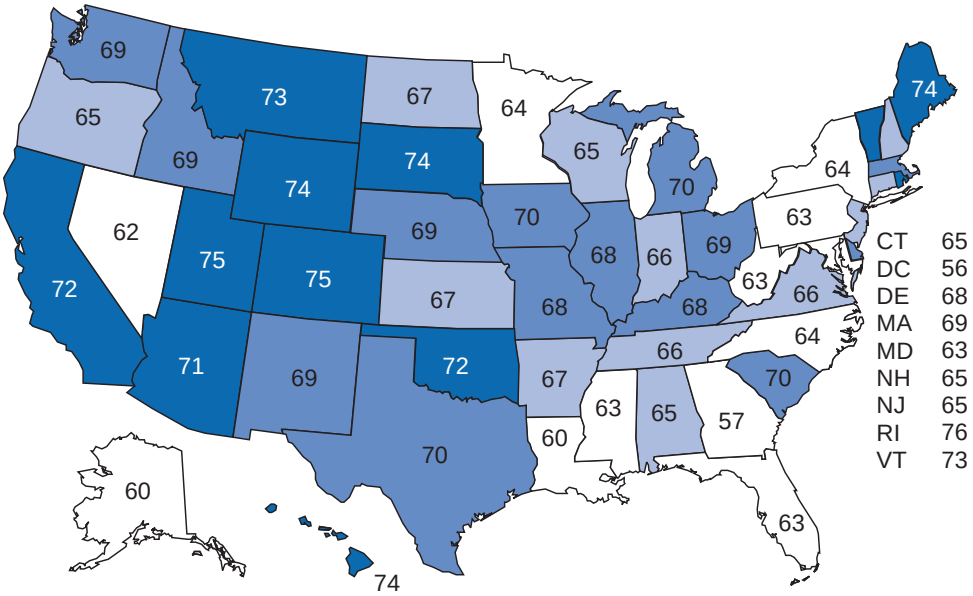
63.5–70.7 | 70.8–72.8 | 72.9–77.0 | 77.1–82.8

United States rate: 72.8; *Healthy People 2010* target: 80.0

*≥4 doses of diphtheria and tetanus toxoids and pertussis vaccine; ≥3 doses of poliovirus vaccine; ≥1 dose of measles-containing vaccine; ≥3 doses of *Haemophilus influenza* type b vaccine; and >3 doses of hepatitis B vaccine.

Source: National Immunization Survey, National Immunization Program, CDC.

Vaccination Coverage for Influenza Among Adults, 1999



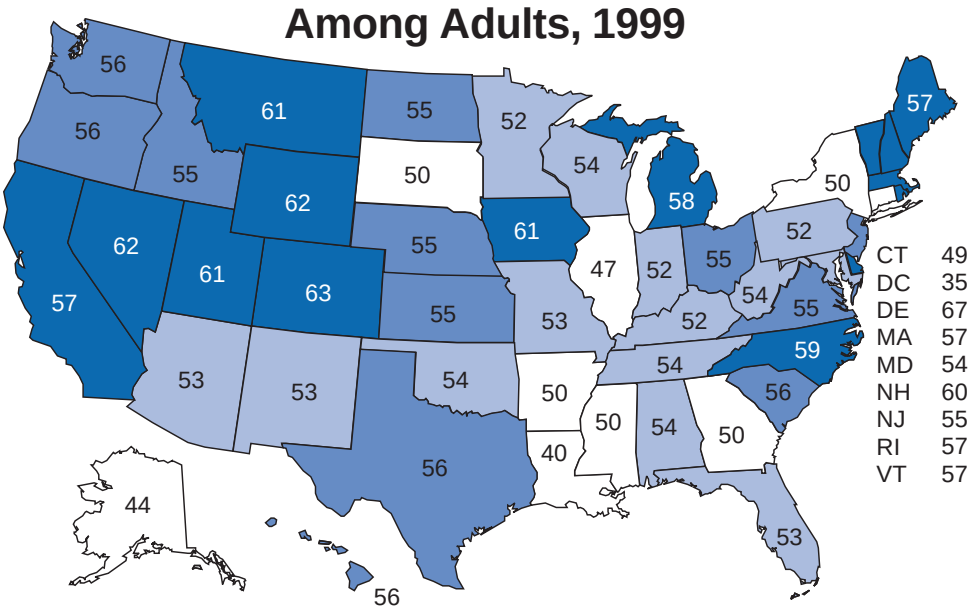
Age-adjusted percentage of vaccination coverage for adults aged ≥65 years

56–64 | 65–67 | 68–70 | 71–76

United States rate: 67; *Healthy People 2010* target: 90

Source: Behavioral Risk Factor Surveillance System, CDC.

Vaccination Coverage for Pneumococcal Disease Among Adults, 1999



Age-adjusted percentage of vaccination coverage for adults aged ≥65 years

35–50 | 51–54 | 55–56 | 57–67

United States rate: 54; *Healthy People 2010* target: 90

Source: Behavioral Risk Factor Surveillance System, CDC.

Profiles of General Demographic Characteristics

The following pages are adapted from data provided by the U.S. Census Bureau, Census 2000. See http://www.census.gov/prod/www/abs/decenial.html for additional information regarding confidentiality protection, nonsampling error, and definitions.

Table DP-1. Profile of General Demographic Characteristics: 2000
Geographic Area: United States

Subject	Number	Percent
Total population	**281,421,906**	**100.0**
SEX AND AGE		
Male	138,053,563	49.1
Female	143,368,343	50.9
Under 5 years	19,175,798	6.8
5 to 9 years	20,549,505	7.3
10 to 14 years	20,528,072	7.3
15 to 19 years	20,219,890	7.2
20 to 24 years	18,964,001	6.7
25 to 34 years	39,891,724	14.2
35 to 44 years	45,148,527	16.0
45 to 54 years	37,677,952	13.4
55 to 59 years	13,469,237	4.8
60 to 64 years	10,805,447	3.8
65 to 74 years	18,390,986	6.5
75 to 84 years	12,361,180	4.4
85 years and over	4,239,587	1.5
Median age (years)	35.3	(X)
18 years and over	209,128,094	74.3
Male	100,994,367	35.9
Female	108,133,727	38.4
21 years and over	196,899,193	70.0
62 years and over	41,256,029	14.7
65 years and over	34,991,753	12.4
Male	14,409,625	5.1
Female	20,582,128	7.3
RACE		
One race	274,595,678	97.6
White	211,460,626	75.1
Black or African American	34,658,190	12.3
American Indian and Alaska Native	2,475,956	0.9
Asian	10,242,998	3.6
Asian Indian	1,678,765	0.6
Chinese	2,432,585	0.9
Filipino	1,850,314	0.7
Japanese	796,700	0.3
Korean	1,076,872	0.4
Vietnamese	1,122,528	0.4
Other Asian [1]	1,285,234	0.5
Native Hawaiian and Other Pacific Islander	398,835	0.1
Native Hawaiian	140,652	-
Guamanian or Chamorro	58,240	-
Samoan	91,029	-
Other Pacific Islander [2]	108,914	-
