Global School based Student Health Survey

Taiwan Zone 2

2012 Fact Sheet

The 2012 Taiwan Zone 2 GSHS measured alcohol use; dietary behaviors; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The Taiwan Zone 2 GSHS was a school-based survey of students in grades 1, 2, and 3. A two-stage cluster sample design was used to produce data representative of all students in grades 1, 2, and 3 in Taiwan Zone 2. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 92%, and the overall response rate was 92%. A total of 1771 students participated in the Taiwan Zone 2 GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
