Subject: 103 - Endicott Project Comments

I have worked at IBM Endicott for years. By the time I was I had thyroid cancer and surgery.
At I had another thyroid surgery followed by radiation. I worked in numerous buildings but am convinced that the toxic
chemicals at IBM cause this cancer. I have no family history of thyroid cancer and doctors could not explain any of this.

The news showed great concern for the Endicott residents but I have not seen much concern regarding IBM employees
who worked in this day after day. Will some action be taken against IBM regarding the employee's health? Should
someone have contacted me asking about my thyroid cancer?
