

Facilitator Guide for *Tuberculosis (TB) in Correctional Settings: What Corrections Staff Need to Know* Slide Set

Goal: The *Tuberculosis (TB) in Correctional Settings: What Corrections Staff Need to Know* slide set is designed to be used by health department staff to educate correctional facility staff on TB treatment and control efforts.

Audience: The intended audience for this slide set is non-medical correctional facility staff.

Reference: This slide set was developed using the CDC Guidelines *Prevention and Control of Tuberculosis in Correction and Detention Facilities: Recommendations from CDC, 2006* (<http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5509a1.htm>).

Overview: *Tuberculosis (TB) in Correctional Settings: What Corrections Staff Need to Know* has the following sections:

- TB Basics
- TB Testing in Correctional Facilities
- TB Treatment
- Environmental Control: TB In Correctional Settings
- Collaboration Between Correctional Facilities and Public Health TB Control Programs

Facilitator Tips: These slides are a starting point for a conversation between correctional facilities/systems and public health departments. The slides can be adapted as needed.

- Remove slides as needed to allow for the time allotted or to meet audience needs.
- Add slides that include information on state and/or local regulations regarding TB and corrections in your jurisdiction.
- Substitute terms used in state or local facilities.
- Solutions may need to be addressed system-wide and may not be able to be addressed by working with a single correctional facility. Adapt the slides to include information about the larger systemic processes.
- Additional facilitator tips are included in the notes section of the PowerPoint slides.
