Subject: 103 - Endicott Project Comments

I believe that this study is long over due, I worked at IBM Endicott for years and I have names and know the various types of cancer other workers died from. It would be interesting to see if IBM's data correlates with mine. I also believe that the two hospitals in this area should turn over their records to insure accuracy, as I do not trust IBM, they may try to skew the data. The longer IBM drags this out makes it better for them as workers and their families die, so IBM's liability decreases. Also, records can get lost or misplaced, it happens all the time.
