## 2006 SMART BRFSS County Methodology

## 2006 Selected Metropolitan/Micropolitan Area Risk Trends from the BRFSS Creation of Metropolitan-level Weights

The Behavioral Risk Factor Surveillance System (BRFSS) Selected Metropolitan/Micropolitan Area Risk Trends (SMART) is a documented and verified subset of the 2006 BRFSS that has been produced to provide some local-area estimates. These local areas are identified counties within metropolitan or micropolitan statistical areas (MMSA), as defined by the Office of Management and Budget. The data set was produced by adding new analysis weights designed to correspond to the 2006 population estimates for each eligible county within a selected MMSA. The additional weights were post-stratified to the county level. The process by which these new weights were obtained is detailed in Appendix C, Weight Class Collapsing Rules.

## Selected Areas

Typically, BRFSS data are used to produce state-level estimates. However, for the SMART project, BRFSS data were used to produce small-area-level estimates for MMSAs, as defined by the Bureau of the Census. On June 6, 2003, the Office of Management and Budget (OMB) issued new definitions for metropolitan statistical areas, micropolitan statistical areas, and metropolitan divisions. OMB periodically updates the list of MMSAs. The list of areas used for this analysis can be found at http://www.whitehouse.gov/omb/bulletins/fy05/b05-02 appendix.pdf. For more information about MMSAs, please visit http://www.census.gov/population/www/estimates/metroarea.html.

Respondents were associated with a particular MMSA on the basis of their county code. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number. There were 145 MMSAs that met the analysis criteria for the 2006 data year. From within the 145 MMSAs, county-level estimates have been produced from the BRFSS data for 234 counties that have met the weighting criteria (Appendix C) for the 2006 data year.

## Appendix A: List of Variables Added to the 2006 Data

Data Documentation for the 13 Variables Added to the 2006 BRFSS Data
ADJCNTY County-level post-stratification weight. This factor is multiplied by the design weight (_WT2) to get the final county-level weight (_CNTYWT).

AGE_CNTY Age categories used to set up the initial weighting classes for the county-level weights.

1-18-24
2-25-34
3-35-44
4-45-54
5-55-64
6-65+
AGE_C_F Age categories used in the final weighting classes for the county-level weights.
1-18-24
2-25-34
3-35-44
4-45-54
5-55-64
6-65+
7-18-34
8-35-54
9-55+
10-18-44
11-45+
12-18-54
14-45-64
19-35+
RACE_CNT Race categories used to set up the initial weighting classes for the county-level weights.

0 - Race not used
1 - White, non-Hispanic
2 - Nonwhite or Hispanic
RACE_C_F Race categories used in the final weighting classes for the county-level weights.
0 - Race not used
1 - White, non-Hispanic
2 - Nonwhite or Hispanic
SEX_CNTY Sex categories used to set up the initial and final weighting classes for the county-level weights (weight classes are never collapsed across sex category).

1 - Male
2 - Female
_CNTY - FIPS FIPS (Federal Information Processing Standards) County code of the county where the respondent lives. This variable is equivalent to CTYCODE, except for respondents with a CTYCODE of "777" or "999". The county code for these respondents was imputed based on information provided by the CDC's Behavioral Surveillance Branch (BSB).

CNTYNAM Name of the county where the respondent lives.
_CNTYWT The new county-level weight. This is the weight to use when generating countylevel estimates for questions that were asked of the whole sample.

## Appendix B: List of the 234 Counties That Have COUNTY-level Weights in 2006 BRFSS Data

## Metropolitan/Micropolitan Statistical Area or Metropolitan Division Codes and Names

| State Name | FIPS State | FIPS County | County Name |
| :---: | :---: | :---: | :---: |
| Alabama | 1 | 73 | Jefferson County |
| Arizona | 4 | 13 | Maricopa County |
| Arizona | 4 | 19 | Pima County |
| Arizona | 4 | 21 | Pinal County |
| Arizona | 4 | 27 | Yuma County |
| Arkansas | 5 | 7 | Benton County |
| Arkansas | 5 | 119 | Pulaski County |
| Arkansas | 5 | 143 | Washington County |
| California | 6 | 1 | Alameda County |
| California | 6 | 37 | Los Angeles County |
| California | 6 | 65 | Riverside County |
| California | 6 | 71 | San Bernardino County |
| California | 6 | 73 | San Diego County |
| Colorado | 8 | 1 | Adams County |
| Colorado | 8 | 5 | Arapahoe County |
| Colorado | 8 | 31 | Denver County |

## Appendix C: Weight Class Collapsing Rules

## County-level Weighting Methodology

Respondents were assigned to a county on the basis of their FIPS (Federal Information Processing Standards) county codes. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number before the respondent identifies a county during data collection.

All respondents in counties were then assigned to age, race, and sex categories. If a respondent's age was missing, it was imputed by using the variable _IMPAGE available in the BRFSS public-use 2006 data file. If a respondent's race was missing, it was imputed by using the majority race for the county in which the respondent lives. The six age categories were 18-$24,25-34,35-44,45-54,55-64$, and 65+. The two race categories were white, non-Hispanic, and nonwhite or Hispanic.

Within each county, respondents were assigned to weighting classes on the basis of the age, race, and sex categories described above. Some states do not use race in post-stratification. For the county in states that do not use race, only the age and sex groups were used to set up weighting classes. For the county in states that do use race, all three groups were used to set up weighting classes. Thus, the counties that use race had 24 initial weighting classes, and counties that do not use race had 12 initial weighting classes.

Weighting classes with fewer than 19 sample members were collapsed in accordance with the following rules:

1. For those counties that used race in post-stratification, the race categories within a sex category are collapsed if at least $80 \%$ of the age categories in that race /sex crossclassification (i.e., 5 of 6 the age categories) have fewer than 19 members. In counties that used race to create the initial weighting classes, the number of weighting classes was thus reduced from 24 to 12 if race was collapsed for both sexes and from 24 to 18 if race was collapsed for only one sex.
2. The two youngest age categories in any age/sex or age/sex/race weighing class are collapsed if either contains fewer than 19 members. The same occurs for the two middle and the two oldest age categories in each remaining weighting class.
3. If either of the age/sex or age/sex/race categories have fewer than 19 members, then the age categories are collapsed until there are 19 members in some combination of the age categories listed in the variable AGE_C_F.
4. Weighting classes are not collapsed across sex.
5. A county should not be included in the reweighting that still has weighting classes with fewer than 19 sample members after all collapsing rules have been applied. These counties will be excluded from the 2006 SMART BRFSS.

There were 145 MMSAs that had at least 500 respondents in the 2006 BRFSS and at least 19 sample members in all final weighting classes. There are 234 counties within the 145 MMSAs that had at least 19 sample members in all final weighting classes. (See Appendix B in the Data Documentation for a list of these counties.) Only the respondents in these counties were given a county-level weight. To calculate the new county-level weight, we applied a post-stratification adjustment factor to the design weight (_WT2) and created the adjustment factor by taking the ratio of the total population over the sum of the design weights for each weighting class within
each county. The new county-level weight (_CNTYWT) should be used to generate estimates in these 234 counties.

```
Example SUDAAN Code:
For example, to estimate for DeKalb County, Georgia (_STATE=13, _CNTY=89). The following
SAS/SUDAAN code that could be used to do this:
data XXXX;
set yyyy;
if (_STATE=13 & _CNTY=89) then DUMMY=1;
run;
proc sort data=xxxx;
by _STSTR SEQNO;
run;
proc descript data=xxxx filetype=sas design=wr;
nest _STSTR SEQNO / missunit;
weight _CNTYWT;
subpopn DUMMY=1 / name="DeKalb County, GA";
var (your analysis variable);
catlevel (the level of your analysis variable for which you want an estimate);
run;
```
