I. Data Cleaning and Editing

This section describes the data cleaning and editing procedures for principal and lead health education teacher raw data sets.

After the questionnaires are scanned, Profiles data are edited to account for missing data and to enforce logical consistency among variables. The following sections explain the missing value codes assigned to the data, the logic with which they are assigned, and the consistency checks applied to each of the principal and lead health education teacher data sets.

1. Missing Value Codes

The scanned principal and lead health education teacher Profiles files are all edited using the following missing value codes. The codes are named as such based on SAS naming conventions.

.A	Indicates that the question was correctly skipped.
.B	Indicates that the question should have been skipped but incorrectly contained a
	response.
.C	Indicates that the question should have been answered but was incorrectly skipped.
.D	Indicates that the question contained invalid data such as more than one response, a
	stray mark, or some other situation that the scanner could not interpret.
.E	Indicates that it cannot be determined whether a question response should be present
	or not. This occurs if a previous skip control question is missing for some reason.
.F	Indicates that the question response is logically inconsistent with another question
	response. Both responses are set to .F.

The missing value codes are assigned based on the logic found in the following sections.

2. Data Edits

a. Principal Questions

Principal questions are recoded to one of the missing value types according to the following logic:

Question 5 skips – If question 5 is 'b', questions 6 and 7 will be recoded to .A or .B. If question 5 is blank or invalid, questions 6 and 7 will be recoded to .E.

Question 25 skips – If question 25 is 'b', questions 26 through 28 will be recoded to .A or .B. If question 25 is blank or invalid, questions 26 through 28 will be recoded to .E.

Question 33 skips – If question 33 is 'b', question 34 will be recoded to .A or .B. If question 33 is blank or invalid, question 34 will be recoded to .E.

Next, any remaining blanks are recoded to .C, and any invalid responses (2 or more responses per category) are recoded to .D for all of the questions.

b. Lead Health Education Teacher Questions

Lead health education teacher questions are recoded to one of the missing value types according to the following logic:

Question 1 skips – If question 1 is 'a', questions 2 and 3 will be recoded to .A if the item was left blank, or .B if the item was answered. If question 1 is blank or invalid, questions 2 and 3 will be recoded to .E.

Next, any remaining blanks are recoded to .C, and any invalid responses (2 or more responses per category) are recoded to .D for all of the questions.

3. Logical Consistency Edits

a. Principal Questions

After the missing value codes .A-.E are assigned to the principal scanned data, the following **consistency checks (1-10)** are run, changing both responses that cause an inconsistency to .F:

1	1602 - 1 2 1	O2h = 2
1.	If $Q2a = 1$ or 2 and	Q2b = 3
	or	Q2c = 3
	or	Q2d = 3
	or	Q2e = 3
	or	Q2f = 3
	or	Q2g = 3
	or	Q2h = 3
	or	Q2i = 3
	or	Q2j = 3
2.	If $Q2b = 1$ or 2 and	Q2a = 3
	or	Q2c = 3
	or	Q2d = 3
	or	Q2e = 3
1	or	Q2f = 3
1	or	Q2g = 3

	or	Q2g = 3
		Q2g = 3 Q2h = 3
	or	
	or	Q2i = 3

b. Lead Health Education Teacher Questions

After the missing value codes .A-.E are assigned to the teacher scanned data, the following **consistency checks (1-51)** are run, checking <u>all</u> conditions once, and then afterwards changing both responses that cause an inconsistency to .F.

1.	If Q2a=3 and Q2b=3 and Q2c=3 and	Q10a 1 = 1 or 2
1.		$Q10a_1 - 1 \text{ of } 2$ $Q10b_1 = 1 \text{ or } 2$
	or	$Q100_1 = 1 \text{ of } 2$ $Q10c_1 = 1 \text{ or } 2$
	or	$Q10c_1 - 1 \text{ or } 2$ $Q10d_1 = 1 \text{ or } 2$
	or	· _
	or	$Q10e_1 = 1 \text{ or } 2$
	or	$Q10f_1 = 1 \text{ or } 2$
	or	$Q10g_1 = 1 \text{ or } 2$
	or	$Q10h_1 = 1 \text{ or } 2$
	or	$Q10i_1 = 1 \text{ or } 2$
	or	$Q10j_1 = 1 \text{ or } 2$
	or	$Q10k_1 = 1 \text{ or } 2$
	or	$Q101_1 = 1 \text{ or } 2$
	or	$Q10m_1 = 1 \text{ or } 2$
	or	$Q10n_1 = 1 \text{ or } 2$
	or	$Q100_1 = 1 \text{ or } 2$
2	or	$Q10p_1 = 1 \text{ or } 2$
2.	If $Q2d = 3$ and $Q2e=3$ and $Q2f=3$ and $Q2g=3$ and	$Q10a_2 = 1 \text{ or } 2$
	or	$Q10b_2 = 1 \text{ or } 2$
	or	$Q10c_2 = 1 \text{ or } 2$
	or	$Q10d_2 = 1 \text{ or } 2$
	or	$Q10e_2 = 1 \text{ or } 2$
	or	$Q10f_2 = 1 \text{ or } 2$
	or	$Q10g_2 = 1 \text{ or } 2$
	or	$Q10h_2 = 1 \text{ or } 2$
	or	$Q10i_2 = 1 \text{ or } 2$
	or	$Q10j_2 = 1 \text{ or } 2$
	or	$Q10k_2 = 1 \text{ or } 2$
	or	$Q101_2 = 1 \text{ or } 2$
	or	$Q10m_2 = 1 \text{ or } 2$
	or	$Q10n_2 = 1 \text{ or } 2$

Finally, for principal and lead health education teacher data, any valid character data (including 'Not Applicable') is recoded to numeric data (A=1, B=2, and so on).

Questionnaires are subverted only when they contain no data after editing.

4. Grade Span Consistency Edits

Profiles survey results are reported by three school grade levels (middle school, junior/senior high school, high school). Schools are classified into grade level based on the grade span on the sampling frame. Low grade and high grade on the sampling frame are named f_lowgrade and f_higrade, respectively. Four of the Profiles questions (Principal Q16, Lead Health Education Teacher (LHT) Q2, LHT Q10, LHT Q11, and LHT Q12) contain grade-specific responses. These grade questions are compared to the grade span of the school and edited for consistency.

After the edit codes .A-.H have been assigned to the principal and teacher scanned data, Principal Q16, LHT Q2, LHT Q9, LHT Q11, and LHT Q12 are edited using the .I edit code to indicate that the responses to these grade questions are inconsistent with the grade span.

a. Principal Question 16

Each Principal Q16 item (Q16a–Q16g) is checked for consistency. If the item response is inconsistent, that response is recoded to .I. The following consistency checks (1-14) are run.

- 1. If $f_{\text{lowgrade}} > 6$ or $f_{\text{higrade}} < 6$ and $Q_{16a} = 1$ or 2
- 2. If $f_{\text{lowgrade}} \le 6$ and $f_{\text{higrade}} \ge 6$ and Q16a = 3
- 3. If f lowgrade > 7 or f higrade < 7 and Q16b = 1 or 2
- 4. If f_lowgrade ≤ 7 and f_higrade ≥ 7 and Q16b = 3
- 5. If $f_lowgrade > 8$ or $f_higrade < 8$ and Q16c = 1 or 2
- 6. If $f_{\text{lowgrade}} \le 8$ and $f_{\text{higrade}} \ge 8$ and $Q_{16c} = 3$
- 7. If $f_{output} = 9$ or $f_{higrade} < 9$ and $Q_{16d} = 1$ or 2
- 8. If $f_{output} = 9$ and $f_{higrade} = 9$ and $Q_{16d} = 3$
- 9. If $f_lowgrade > 10$ or $f_higrade < 10$ and Q16e = 1 or 2
- 10. If $f_lowgrade \le 10$ and $f_higrade \Longrightarrow 10$ and Q16e = 3
- 11. If $f_{output} = 11$ or $f_{higrade} < 11$ and Q16f = 1 or 2
- 12. If $f_{\text{lowgrade}} \le 11$ and $f_{\text{higrade}} \ge 11$ and Q16f = 3
- 13. If $f_{\text{lowgrade}} > 12$ or $f_{\text{higrade}} < 12$ and $Q_{16g} = 1$ or 2
- 14. If $f_{\text{lowgrade}} \le 12$ and $f_{\text{higrade}} \ge 12$ and Q16g = 3

b. Lead Health Education Teacher Question 2

Each Teacher Q2 item (Q2a - Q2g) is checked for consistency. If the item response is inconsistent, that response is recoded to .I. The following consistency checks (1-14) are run.

- 1. If $f_{\text{lowgrade}} > 6$ or $f_{\text{higrade}} < 6$ and Q2a = 1 or 2
- 2. If f_lowgrade ≤ 6 and f_higrade ≥ 6 and Q2a = 3
- 3. If f lowgrade > 7 or f higrade < 7 and Q2b = 1 or 2
- 4. If f lowgrade ≤ 7 and f higrade ≥ 7 and Q2b = 3
- 5. If f lowgrade > 8 or f higrade < 8 and Q2c = 1 or 2
- 6. If f lowgrade ≤ 8 and f higrade ≥ 8 and Q2c = 3
- 7. If f lowgrade > 9 or f higrade < 9 and Q2d = 1 or 2
- 8. If f lowgrade ≤ 9 and f higrade ≥ 9 and Q2d = 3
- 9. If $f_{\text{lowgrade}} > 10$ or $f_{\text{higrade}} < 10$ and Q2e = 1 or 2
- 10. If f lowgrade ≤ 10 and f higrade ≥ 10 and Q2e = 3
- 11. If f lowgrade > 11 or f higrade < 11 and Q2f = 1 or 2
- 12. If f lowgrade ≤ 11 and f higrade $\Rightarrow 11$ and Q2f = 3
- 13. If f lowgrade > 12 or f higrade < 12 and Q2g = 1 or 2
- 14. If f lowgrade ≤ 12 and f higrade ≥ 12 and Q2g = 3

c. Lead Health Education Teacher Question 10

Each Teacher Q10 item (Q10a_1-Q10p_1, Q10a_2-Q10p_2) is checked for consistency. If the item response is inconsistent, that response is recoded to .I. The following consistency checks (1-64) are run.

1. If f lowgrade \Rightarrow 9 and Q10a 1 = 1 or 2 2. If f lowgrade \Rightarrow 9 and Q10b 1 = 1 or 2 3. If f lowgrade \Rightarrow 9 and Q10c 1 = 1 or 2 4. If f lowgrade \Rightarrow 9 and Q10d 1 = 1 or 2 5. If f lowgrade \Rightarrow 9 and Q10e 1 = 1 or 2 6. If f lowgrade \Rightarrow 9 and Q10f 1 = 1 or 2 7. If f lowgrade \Rightarrow 9 and Q10g 1 = 1 or 2 8. If f lowgrade \Rightarrow 9 and Q10h 1 = 1 or 2 9. If f lowgrade \Rightarrow 9 and Q10i 1 = 1 or 2 10. - 52. If f_higrade => 9 and $Q10d_2 = 3$
- 53. If f_higrade => 9 and $Q10e_2 = 3$
- 54. If f_higrade => 9 and $Q10f_2 = 3$
- 55. If f_higrade => 9 and $Q10g_2 = 3$
- 56. If f_higrade => 9 and Q10h_2 = 3 57. If f_higrade => 9 and O10i 2 = 3
- 57. If f_higrade => 9 and Q10i_2 = 3 58. If f_higrade => 9 and Q10i_2 = 3
- 58. If f_higrade => 9 and $Q10j_2 = 3$ 59. If f_higrade => 9 and $Q10k_2 = 3$
- 59. If f_higrade => 9 and Q10k_2 = 3 60. If f_higrade => 9 and Q10l_2 = 3
- 60. If f_higrade => 9 and $Q10l_2 = 3$ 61. If f higrade => 9 and $Q10m_2 = 3$
- 62. If f_higrade => 9 and Q10n 2 = 3
- 63. If f higrade => 9 and Q100 2 = 3
- 64. If f higrade => 9 and $Q10p_2 = 3$

d. Lead Health Education Teacher Question 11

Each Teacher Q11 item (Q11a–Q11g) is checked for consistency. If the item response is inconsistent, that response is recoded to .I. The following consistency checks (1-14) are run.

- 1. If f higrade < 9 and Q11a = 1 or 2
- 2. If f higrade < 9 and Q11b = 1 or 2
- 3. If f higrade < 9 and Q11c = 1 or 2
- 4. If f higrade < 9 and Q11d = 1 or 2
- 5. If f higrade < 9 and Q11e = 1 or 2
- 6. If f higrade < 9 and Q11f = 1 or 2
- 7. If f higrade < 9 and Q11g = 1 or 2
- 8. If f higrade =>9 and Q11a = 3
- 9. If f higrade \Rightarrow 9 and Q11b = 3
- 10. If f higrade \Rightarrow 9 and Q11c = 3
- 11. If f higrade \Rightarrow 9 and Q11d = 3
- 12. If f higrade => 9 and Q11e = 3
- 13. If f higrade \Rightarrow 9 and Q11f = 3
- 14. If f higrade => 9 and Q11g = 3

e. Lead Health Education Teacher Question 12

Each Teacher Q12 item (Q12a_1-Q12g_1, Q12a_2-Q12g_2) is checked for consistency. If the item response is inconsistent, that response is recoded to .I. The following consistency checks (1-28) are run.

- 1. If f lowgrade \Rightarrow 9 and Q12a 1 = 1 or 2
- 2. If $f_{\text{lowgrade}} \Rightarrow 9$ and $Q12b_1 = 1$ or 2
- 3. If f_lowgrade \Rightarrow 9 and Q12c_1 = 1 or 2
- 4. If $f_{output} = 9$ and $Q_{12d_1} = 1$ or 2
- 5. If $f_lowgrade \Rightarrow 9$ and $Q12e_1 = 1$ or 2
- 6. If $f_{v_1} = 9$ and $Q_{12}f_{1} = 1$ or 2
- 7. If $f_lowgrade \Rightarrow 9$ and $Q12g_1 = 1$ or 2
- 8. If $f_{lowgrade} < 9$ and $Q12a_1 = 3$
- 9. If $f_{output} = 3$ and $Q_{12b_1} = 3$
- 10. If f_lowgrade < 9 and Q12c_1 = 3
- 11. If $f_{output} = 3$ and $Q_{12d_{1}} = 3$
- 12. If $f_{output} = 3$ and $Q_{12e_1} = 3$
- 13. If $f_{output} = 3$ and $Q_{12}f_{1} = 3$
- 14. If $f_{output} = 3$ and $Q_{12g_1} = 3$
- 15. If f higrade < 9 and Q12a 2 = 1 or 2
- 16. If f higrade < 9 and Q12b 2 = 1 or 2
- 17. If f higrade < 9 and Q12c 2 = 1 or 2
- 18. If f higrade < 9 and Q12d 2 = 1 or 2
- 19. If f higrade < 9 and Q12e 2 = 1 or 2
- 20. If f higrade < 9 and Q12f 2 = 1 or 2
- 21. If f higrade < 9 and Q12g 2 = 1 or 2
- 22. If f higrade \Rightarrow 9 and Q12a 2 = 3
- 23. If f higrade => 9 and $O12b^2 = 3$
- 24. If f higrade => 9 and $Q12c^2 = 3$
- 25. If f higrade => 9 and $Q12d^2 = 3$
- 26. If f higrade => 9 and $Q12e^2 = 3$
- 27. If f higrade \Rightarrow 9 and Q12f 2 = 3
- 28. If f higrade \Rightarrow 9 and Q12g 2 = 3

II. Derived Variable Specifications

1. Principal Standard Variables

Each standard question can be analyzed as a dichotomous variable. The dichotomous variables present the percentage of principals answering the predetermined response of interest (ROI). Principals answering the ROI are in the numerator. The denominator is either all principals or a subset of principals who have indicated in the current questionnaire that the school meets a certain criterion. These criteria include having a school health council or having adopted a particular policy. Principals must have provided valid data to be included in any dichotomous variable calculations. Principals with missing responses or who had their answers cleaned during consistency editing are not included. The dichotomous variable results are presented in the tables and bar charts on your CD-ROM.

The following table provides the question and response options for each survey variable and the derivation of its dichotomous variable. The numerator and the denominator of the dichotomous variable are defined below the survey variable. The summary text appearing in the title of the tables for each dichotomous variable is also listed. The threshold for reporting frequencies and percentages is provided. The thresholds for reporting depend on whether the result is reported by grade level category or for all schools and on whether there is a skip pattern that involves the question being processed. When the denominator frequency of the dichotomous variable is less than the threshold, data are suppressed for reporting.

Q1_1. Has your school ever used the School Health Index or other self-assessment tool to assess your school's policies, activities, and programs in physical activity?			
A. B.	Yes No		
Numerator: Denominator: Summary text: Variable label: Threshold:	Respondents who answered A for Q1_1 Respondents who answered A or B for Q1_1 Percentage of schools that ever used the School Health Index or other self- assessment tool to assess school policies, activities, and programs in physical activity School Health Index to assess physical activity All Schools=55 and By Grade Level=19

3. Lead Health Education Teacher Standard Variables

Each standard question can be analyzed as a dichotomous variable. The dichotomous variables present the percentage of lead health education teachers answering the predetermined response of interest (ROI). Teachers answering the ROI are in the numerator. The denominator is either all teachers or a subset of teachers who have indicated in the current survey the school has a particular program. Teachers must have provided valid data to be included in any dichotomous variable calculations. Teachers with missing responses or who had their answers cleaned during consistency editing are not included. The dichotomous variable results are presented in the tables and bar charts on your CD-ROM.

The following table provides the question and response options for each survey variable and the derivation of its dichotomous variable. The numerator and the denominator of the dichotomous variable are defined below the survey variable. The summary text appearing in the title of the tables for each dichotomous variable is also listed. The threshold for reporting frequencies and percentages is provided. The thresholds for reporting depend on whether the result is reported by grade level category or for all schools and on whether there is a skip pattern that involves the question being processed. When the denominator frequency of the dichotomous variable is less than the threshold, data are suppressed for reporting.

	hany required health education courses do students take in grades 6 through 12 in your? (Mark one response.)
А.	0 courses -Skip to Question 4
B.	1 course
C.	2 courses
D.	3 courses
E.	4 or more courses
Numerator:	Depends on the response of interest (ROI). If ROI is A, then the numerator includes respondents who answered A for Q1
Denominator:	Respondents who answered A, B, C, D, or E for Q1

5. SSE SLIM 1 – SSE SLIM 4

Supplemental variables SSE_SLIM1 - SSE_SLIM4 are derived from the principal and lead health education teacher questions. Schools with either a participating principal or a participating lead health education teacher or both are counted as respondents and included in the calculation of these supplemental variables. Using this counting rule, a response rate is calculated for determining whether SSE_SLIM1 through SSE_SLIM4 are weighted. If the response rate is at least 70%, weighted estimates of SSE_SLIM1 through SSE_SLIM4 are produced. The following table presents the numerator and the denominator for calculating the supplemental dichotomous variables.

 Numerator: Respondents who answered A to at least four of principal Q45_1-Q45_4, Q46, Q50 and teacher Q18 Denominator: Respondents who answered A to at least four of principal Q45_1-Q45_4, Q46, Q50 and teacher Q18, or who answered A to less than four of teacher Q45_1-Q45_4, Q46, Q50 and teacher Q18 percentage of schools that implement parent engagement strategies for all students by doing at least four of the following: Providing parents and families with information about how to communicate with their child about sex Providing parents and families with information about how to communicate child (this includes the expectations parents have for their child's behavior; the actions parents take to keep track of their child; and the ways parents respond when their child breaks the rules) Establishing one or more communication channels (e.g., electronic, paper, or oral) with parents about school health services and programs Involving parents and families to health education activity and services Engaging parents in the development and implementation of school health policies and programs Linking parents and families to health services and programs in the community SSE1 parent engagement SE1 parent engagement Variable label: Dependence: Depends on principal Q45_1-Q45_4, Q46, Q50 and teacher Q18 All Schools=55 and By Grade Level=19 cntslim1=.; flgslim1=.; array slim1(7) Q45_1 Q45_2 Q45_3 Q45_4 Q46 Q50 Q18; do i = 1 to 7; cntslim1 = sum(ntslim1, slim1(i) ^in (1,2)); end; if cntslim1>=4 then SSE_SLIM1=1; else if sum(cntslim1, flgslim1) >= 4 then SSE_SLIM1=.;

III. Analysis Software Technical Notes

1. Software Requirements and Sample Packages

Profiles uses a systematic equal probability sample design. Statistical software used to analyze Profiles data should account for this design. Although the point estimates will always match, there will be small differences in the confidence intervals as different methods for calculating standard errors are used. Many packages with this capability for calculating standard errors are available (SUDAAN, SAS, STATA, SPSS, and Epi Info).

For Profiles, a finite population correction factor (fpc) is applied to the standard error of the proportion. The *fpc* accounts for sampling from a finite population without replacement. The large sample statistical theory and the standard errors of the percentage are based on the assumption that the samples are selected with replacement. However, in practice, samples are selected without replacement from populations that are of a finite size. When using the statistical packages mentioned above, special programming is required to incorporate the *fpc* into the calculation of asymmetric confidence intervals. A sample SAS program for computing 95% asymmetric confidence intervals with *fpc* adjustment is provided in Section 3.

2. How to Use the SAS Format Library

The SAS format library contains the formats used to make SAS output more readable. Formats are linked to the data so that results are displayed as words ("Yes" or "No", for instance) instead of numbers (1 or 2). The SAS Profiles data file is designed to use its companion format library. You should download both the data file and the format library if you want to use SAS to analyze Profiles data.

The following example SAS program shows how to use the format library. It assumes that both the data file and the format library have been downloaded to "c:\data". The libname statement indicates where the data file and the format library are located

libname mydata "c:\data"; /* tells SAS where the data are */ options fmtsearch=(mydata.xx2014_formats); /* tells SAS where the formats are (xx is the site code as it appears on the file name on the CD ROM) */ proc freq data=mydata.xxt2014; tables q3; run;

Using the format library is recommended but technically is optional. If you do not want to use the format library, include the following statement at the start of your SAS program:

options nofmterr; /* tells SAS not to look for formats */

2014 School Health Profiles Report Data User's Guide

Please note that each year of Profiles data has its own format library. Format libraries are not the same across years of data.

For further information on using format libraries, please consult your SAS documentation.

3. Example SAS and SAS-callable SUDAAN Program

a. Principal Program

The following SAS program can be found on the CD-ROM under the Data Files page and Sample SAS Code heading. The name of the file is "Example 2014 Principal Program.sas."

```
* Assign the locations for the SAS data and format library (xx is the site code as it appears on the file name on the CD ROM);
```

libname pdata "c:\data\profiles2014"; options fmtsearch=(pdata.xx2014_formats) nofmterr;

* Create a temporary dataset from the principal SAS data set on the CD ROM retaining only records that have principal analysis weights greater than zero (xx is the site code as it appears on the file name on the CD ROM);

```
data principal;
set pdata.xxp2014;
```

```
if finalwt > 0:
```

run;

```
* Sort the data by stratum – this is a SUDAAN requirement;
```

```
proc sort data=principal;
by psstrat;
run;
```

* Run the SUDAAN descript procedure for computing percent estimates and standard errors for Q1 and Q4 by grade level. Save SUDAAN output to a data set for use in subsequent processing steps;

```
proc descript data=principal filetype=sas design=strwr atlevel1=1;
weight finalwt;
nest psstrat;
subgroup f_grdlvl2;
levels 3;
var q1 1 q1 2 q1 3 q1 4 q1 5 q1 6
      q4 q4
catlevel
/* q1 */ 111111
/* q4 */ 12
setenv colspce=2 rowwidth=13 colwidth=17 leftmgn=17;
           nsum wsum percent sepercent /filename=pdata.xx2014 principal estimate
output
                                                                                             filetype=sas
tablecell=default replace;
title "2014 school health profiles - principal survey";
print nsum wsum percent sepercent atlev1 /wsumfmt=f8.2 percentfmt=f8.4 sepercentfmt=f8.5;
run;
```

```
* Compute asymmetric 95% confidence intervals for principal percent estimates with finite population
   correction;
* Extract finite population correction factor (ps fpc) from the principal SAS dataset on the CD ROM;
data ps fpc;
set pdata.xxp2014 (keep=ps fpc);
if n = 1;
run;
* Run Proc Means for computing the number of participating principals (nobs p) and the number of unique
strata in the principal dataset (npsstrat) - these variables are used for calculating the degrees of freedom (df p);
proc means data= pdata.xxp2014;
var psstrat;
output out=out p n=nobs p max=npsstrat;
run;
* Create a dataset that contains ps fpc, nobs p, npsstrat, percent, sepercent;
data pdata.xx2014 allvar;
if n = 1 then set ps fpc;
if n = 1 then set out p (DROP= TYPE FREQ );
set pdata.xx2014 principal estimate;
format all;
run;
* Compute 95% asymmetric confidence intervals with fpc adjustment;
data pdata.principal ci;
 set pdata.xx2014 allvar;
  se s1=sepercent;
  wpct s = percent/100;
  se s2 = se s1*(sqrt(ps fpc));
