& Occup. Epi.

Written Response Form

March 26, 2007

This form is provided for written comments on the Health Statistics Review Follow-up: Cancer and Birth Outcome Analysis in the Endicott area. These comments will be considered, summarized, and addressed in the final health consultation.

Comments on the Health Statistics Review Follow-up:

I Beg to be heard: My Dad worked IBM Endicott for  
years - in 1971 was diagnosed Myeloid leukemia - there is NO  
familial tendencies - no Mediterranean anemias etc in this family  
whatsoever. He gave Blood for many yrs at the facility until ICB  
at IBM observed an 'anemic' condition transformed into 'leukemic  
cells.' He was treated aggressively at the  
Institute and died a horrific death in 1978. He was 36  
an energetic, very strong, healthy, prominent bowler - physically  
fit man who then worked at IBM with chemicals  
totally unprotected by the Company's Standards.  
No one before him and after. In this family he was  
born Anemic in fact 'leukemic'. I am a  
licensed registered nurse and want desperately to be  
heard so that people in this area of suffering and sacrifice  
can voice and for all these companies to be responsible  
for the lives of human beings.

(Attach additional sheets if necessary.)

If you wish, please provide your name and contact information. We will use this information to contact you if we need clarification on your comments. We appreciate your input!

I will testify to this anywhere, anytime & interest.

Please hand this in at the availability session, or if you wish to mail it, please send to: Endicott HSR Follow-up, NYS DOH, 547 River St, Room 200, Troy, NY 12180. Comments may also be submitted by email to: beoe@health.state.ny.us All comments are due by May 28, 2007.

please call me anytime over

As for this report (I have read in its entirety)  
(+ thank you for it) :

I believe much more  
study is needed - more people  
can help to the state -  
we can volunteer our  
time if needed.

So much of your studies  
are "inconclusive"

yet  
many are conclusions. We must  
work harder + quickly.  
where
