Dear Robert,
Based on my understanding of the proposed rule, the paper will give a suggestions and perhaps contribute to the progress in in order to build a powerful and healthy society. one thing I concerned about is that more strict regulations will lead to shortage in the respiratory supply in the market. Moreover, the limitation of the supply will lead to targeting profitable sectors at the expense of other less-profitable sectors, such as children and women. For this reason, I believe that NIODH has to contribute financially to that manufacturing projects. Furthermore, I believe that NIOSH has to impose approved respirators to all insurance benefits to individuals and institutions. Moreover, I think that they have to put a systematic plan to implement the project and take into considerations the economic, security, and health factors before they mandate it. Therefor, the implementation of the project is going to work smoothly and successfully, so that it does not cause any drawback consequences for businesses and individuals.

Sincerely yours,

Wail Alshammari
