Subject: RE NIOSH-150

At our ambulatory infusion center we offer removal from either mixing or administering chemotherapy if a staff member is pregnant, or breast feeding. They continue to work in the department. For the nurses, they take care of patients other than those receiving chemotherapy. For the pharmacy techs, they prepare medications other than chemotherapy. If a nurse or tech told me that they were planning on trying to get pregnant, I would allow them to observe the same precautions as if they were already pregnant.
