

## **Traumatic Life Events Questionnaire (TLEQ)**

### **Description**

*Traumatic Life Events Questionnaire* (TLEQ) [Kubany 2000] includes an assessment of the various frequencies and severity of traumatic experiences in adulthood. This self-report instrument was rigorously tested in studies recruiting college students, combat veterans, and battered women and was found to demonstrate excellent psychometric properties. This data set includes the three TLEQ subscale scores (for 3 measured dimensions).

Refer to the data codebook for the detailed information of each variable.

### **Study Sample**

223 participants

### **Data Collection Methods**

TLEQ was administered on the second clinic evaluation day. The scores were derived from the raw responses later.
