

## Demographics: Enrollment in Early Intervention (EI) (2015)

**Source:** 2015 CDC Hearing Screening and Follow-up Survey (HSFS)\*

\*Each jurisdiction's submitted data underwent a cleaning and error check process. Jurisdictions reporting  $\geq 20\%$  of total infants receiving diagnostic testing in the "unknown" category, for each demographic variable, were excluded from this analysis.

\*Percentage of infants enrolled in Part C EI services for each category is calculated among the total number of infants with hearing loss (i.e. % Males Enrolled in Part C EI After Diagnosed with Hearing Loss =  $(\# \text{ Total Enrolled in Part C EI: Male} / \# \text{ Total with Hearing Loss: Male}) * 100$ ). Test for significant difference between percentages was calculated using Pearson's chi-square test where  $\alpha = 0.05$  (Software: SAS 9.4, Cary, NC).
