

United States Cancer Statistics: 1999–2004 Incidence and Mortality Web-Based Report

Geographic Areas Contributing Data for 2004 by U.S. Census Region and Division

All U.S. Census regions and divisions met criteria for display of region-specific incidence and death rates.

Note: Shaded areas represent statewide and metropolitan cancer registries that met the following data quality criteria for cancer incidence: case ascertainment is at least 90% complete; > 97% of cases pass a standard set of computerized edits; < 5% of cases were ascertained by death certificate only; < 3% of cases are missing information on sex; < 5% of cases are missing information on race; < 3% of cases are missing information on age. See <http://www.cdc.gov/uscs> for registry-specific data quality information by year. Incidence data cover approximately 98% of the U.S. population. Mortality data are from the National Vital Statistics Surveillance System and cover 100% of the U.S. population.
