

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES CENTERS FOR DISEASE CONTROL AND PREVENTION

ct.gov/dph

Connecticut

All response begins at the local level. Being prepared to prevent, respond to, and recover from all types of public health threats requires that states and localities improve their capabilities in surveillance, epidemiology, laboratories, and response readiness. Facts on laboratories and response readiness activities appear below. See appendices 1 and 7 for a more detailed description of data points and data sources.

A healthy population is more resilient in public health emergencies. People with chronic conditions may require additional care such as specialized medications, equipment, and other assistance. To develop an effective response plan, a state or locality must consider the unique needs of its own population. In Connecticut, 8.8% of adults reported having asthma, 6.8% diabetes, 5.0% heart disease, and 2.1% had a stroke. In addition, 18.8% reported a limiting disability and 59.7% were overweight or obese.\* \*CDC, ONCDIEH (NCCDPHP) Behavioral Risk Factor Surveillance System, 2008

	Laboratories: General		Labor	atories: Chemical Capabiliti	es	
Maintaining core laboratory functions during an emergency Ensuring availability of Laboratory Response Network (LRN) laboratory results for decision making	Status of continuity of operations State public health laboratory h that was tested State had a standardized electronic data system		Participation in Laboratory Response Network for chemical agents (LRN-C)	LRN-C laboratories with capabilities for responding if the public is exposed to chemical agents <sup>5</sup> Note: There are three levels, with Level 1 having the most advanced capabilities. See appendix 1.	One Level 2 lab	
	capable of messaging laboratory results between LRN laboratories and also to CDC <sup>2</sup> Note: For a description of LRN laboratories, see appendix 1.	Yes	Evaluating LRN-C Iaboratory capabilities	Core methods successfully demonstrated by Level 1 and/or Level 2 laboratories to rapidly detect chemical agents <sup>5</sup>	6 out of 6 methods	
Laboratories: Biological Capabilities			through proficiency	Additional methods successfully demonstrated		
Participation in LRN for biological agents	LRN reference and/or national laboratories that could test for biological agents <sup>3</sup>	1 reference lab	testing	by Level 1 and/or Level 2 laboratories to rapidly detect chemical agents <sup>5</sup>	0 out of 0 methods	
Assessing if laboratory emergency contacts could be reached 24/7	LRN laboratories successfully contacted during a non- business hours telephone drill <sup>3</sup>	1 out of 1 lab		LRN-C laboratory ability to collect, package, and ship samples properly during LRN exercise <sup>5</sup>	Passed	
Evaluating LRN laboratory capabilities	Proficiency tests passed by LRN reference and/or national laboratories <sup>3</sup>	3 out of 3 tests	Assessing LRN-C Iaboratory capabilities	Chemical agents detected by Level 1 and/or Level 2 laboratories in unknown samples during the LRN Emergency Response Pop	Not eligible	
Rapid identification of disease- causing bacteria	<ul> <li>Rapidly identified <i>E. coli</i> <i>O157:H7</i> using advanced DNA tests (PFGE)<sup>4</sup></li> <li>Samples for which state performed tests</li> <li>Test results submitted to PulseNet database within 4 working days (target: 90%)</li> </ul>	33 100%	through exercises	Hours to process and report on 500 samples by Level 1 laboratory during the LRN Surge Capacity Exercise (range was 71 to 126 hours) <sup>5</sup>	N/A	
					•	
by PulseNet laboratories	Rapidly identified L. monocytogenes using		Respor	Response Readiness: Communicati		
	<ul> <li>advanced DNA tests (PFGE)<sup>4</sup></li> <li>Samples for which state performed tests</li> <li>Test results submitted to PulseNet database within 4</li> </ul>	15 100%		State public health department had a 24/7 reporting capacity system that could receive urgent disease reports any time of the day <sup>7</sup>	Yes	
Assessing laboratory competency and reporting through exercises	working days (target: 90%) State public health laboratory conducted exercises to assess competency of sentinel laboratories to rule out bioterrorism agents <sup>1</sup> CDC-funded LRN laboratory ability to contact the CDC Emergency Operations Center within 2 hours during LRN notification drill <sup>3</sup>	Yes		Responded to Health Alert Network (HAN) test message within 30 minutes <sup>8</sup>	Yes	
			Communicating emerging health information	State public health laboratory used HAN or other rapid method (blast email or fax) to communicate with sentinel laboratories and other partners for outbreaks, routine updates, training events, and other applications <sup>1</sup>	44 times	
		Did not participate	momation			
	Note: There is one CDC- funded LRN laboratory in DC and in each state, with the exception of CA, IL, and NY, which have two.			Epidemic Information Exchange users responded to system-wide notification test within 3 hours <sup>9</sup>	58%
