

Successful planning for and response to public health emergencies require protecting the health and safety of all people, especially those who are most vulnerable to the impact of an event. Children, older adults, and people with certain chronic conditions may require additional care such as specialized medications, equipment, and other assistance. Nationally, 36.0% of households included children and 18.5% included older adults. In addition, 9.8% of adults reported having diabetes, 20.2% a condition that limits activities, and 8.2% a health problem that required the use of specialized equipment.¹

CDC identified 15 public health preparedness capabilities as the basis for state and local public health preparedness.

The list to the right reflects the 5 capabilities with the largest Public Health Emergency Preparedness (PHEP) investments during 2014.²

1. Public Health Laboratory Testing
2. Public Health Surveillance and Epidemiological Investigation
3. Community Preparedness
4. Information Sharing
5. Emergency Operations Coordination

Laboratory Response Network biological (LRN-B) labs and PulseNet laboratories independently and rapidly identify and notify CDC of potential biological health threats to minimize disease outbreaks.

CDC manages the LRN-B, a group of 99 public health labs with testing capabilities to confirm the presence of biological agents. CDC also coordinates PulseNet, a national network of labs that analyzes and connects foodborne illness cases together to facilitate early identification of outbreak sources. The performance indicators below demonstrate these specific labs' readiness to respond to a biological public health emergency. See Appendix B for a detailed description of each performance indicator.

Biological Laboratory Testing: LRN-B	2012	2013	2014
Number of LRN-B labs ³	104	102	99
Proportion of LRN-B proficiency tests passed ³	288 / 312	82 / 94	240 / 249
Biological Laboratory Testing: PulseNet	2012	2013	2014
Number of PulseNet labs ⁴	71	72	70
Percentage of <i>E. coli</i> -positive tests analyzed and uploaded into PulseNet national database within 4 working days ⁴	94% (target: 90%)	91% (target: 90%)	96% (target: 90%)
Percentage of <i>Listeria</i> -positive tests analyzed and uploaded into PulseNet national database within 4 working days ⁴	92% (target: 90%)	90% (target: 90%)	93% (target: 90%)

LRN chemical (LRN-C) laboratories rapidly identify exposure to toxic chemicals, aid diagnosis, and minimize further human exposure.

CDC manages the LRN-C, a group of 56 labs with testing capabilities to confirm the presence of chemical agents. LRN-C labs are designated as Level 1, 2, or 3, with Level 1 labs demonstrating the most advanced capabilities. The performance indicators below demonstrate these specific labs' readiness to respond to a chemical public health emergency. See Appendix B for a detailed description of each performance indicator.

Chemical Laboratory Testing: LRN-C	2012	2013	2014
Number of Level 1 LRN-C labs ⁵	10	10	10
Number of Level 2 LRN-C labs ⁵	37	36	36
Number of Level 3 LRN-C labs ⁵	10	11	10
Proportion of core chemical agent detection methods demonstrated by Level 1 and/or Level 2 labs ³	7/9	8/9	8/9
Average number of additional chemical agent detection methods demonstrated by Level 1 and/or Level 2 labs ³	1	1	1
Percentage of Level 1 and Level 2 labs that passed the LRN-C exercise to collect, package, and ship samples ³	100%	100%	100%

Public health agencies deploy resources and personnel to address public health needs arising from emergencies.

The performance indicators below demonstrate the ability to coordinate a response to a public health incident. See Appendix B for a detailed description of each performance indicator.

Emergency Operations Coordination	2012	2013	2014
Average number of minutes for state public health staff with incident management lead roles to report for immediate duty ³	27 (target: 60)	39	29
Average number of minutes for locality and insular area public health staff with incident management lead roles to report for immediate duty ³	50	40	34
Percentage of states, localities, and insular areas that prepared an after-action report and improvement plan following a real or simulated response ³	98%	98%	100%

Administrative preparedness was highlighted as a key challenge during the 2009 H1N1 influenza pandemic.

In response, CDC developed standards and requirements for administrative and fiscal processes, which state and local health departments have now incorporated into their incident action plans. These processes, which differ from normal operations, include emergency procurement, contracting, and hiring processes. See Appendix B for a detailed description of administrative preparedness.

Administrative Preparedness	2014
Percentage of awardees with expedited procedures for receiving emergency funds ⁶	97%
Percentage of awardees that reduced the cycle time for contracting and/or procurement of necessary goods and services ⁶	92%
Percentage of awardees that reduced the cycle time for hiring and/or reassignment of staff ⁶	81%

CDC provides funding and technical assistance to help states, localities, and insular areas build public health preparedness and response capabilities.

CDC provides funding to the 50 states, 4 localities, and 8 insular areas through the PHEP cooperative agreement. In addition to PHEP funding, CDC provides training and personnel to support awardee preparedness and response efforts. See Appendix B for a detailed description of each CDC resource.

CDC Resources Supporting Preparedness	2013–2014
CDC PHEP cooperative agreement funding provided ⁷	\$584,696,784
CDC preparedness field staff ^{8, 9, 10}	128
CDC Emergency Management Program activities ¹¹	351
Public health personnel who received CDC Strategic National Stockpile training ¹²	1,231

States, localities, and insular areas ensure medicine, vaccines, and medical supplies are available to the public during large-scale public health emergencies by supplementing local supplies with assets from CDC's Strategic National Stockpile (SNS).

The technical assistance review (TAR) scores below demonstrate readiness to receive, distribute, and dispense SNS assets to the public during an emergency for the state overall and localities in the Cities Readiness Initiative (CRI). See Appendix B for a detailed description of TAR scores.

TAR Scores (100-point scale)	2011–2012	2012–2013	2013–2014
Median State TAR score ³	98	99	99
Median CRI Metropolitan Statistical Area (MSA) TAR Score ³	93	95	97
Median Directly Funded Locality TAR Score ³	100	98	99
Median Island TAR Score ³	67	71	74
