investigate and protect

PUBLIC HEALTH

Learn **applied epidemiology** while investigating public health problems, such as infectious disease outbreaks, natural disasters, chronic diseases, and poor access to healthcare.

Conduct surveilance of disease, injury, or other health conditions

Assist CDC disease detectives and other public health professionals in the field to investigate disease outbreaks

Analyze health data to identify new risk factors for disease

Contribute to CDC publications and guidelines of major public health importance

APPLY
February 1 – April 1

"We need intelligent, compassionate medical professionals in public health to better preserve global health for animals and humans alike. I did not fully understand the big impact someone can make until I was a part of this program. I now want to live a meaningful life of public service as a veterinarian and give back to the next generation of public health professionals."

Jessica Kwan, DVM, MS, EEP 2023
