NOTES: Estimates are based on four separate race categories; multiple-race data were bridged to the separate race categories as needed. Data are based on births adjusted for underregistration for 1950 and on registered births for all other years. Starting with 1970 data, births to persons who were not residents of the 50 states and the District of Columbia are excluded. Birth data for Alaska and Hawaii have been included since 1959 and 1960, respectively. Starting with Health, United States, 2003, rates for 1991–1999 were revised using intercensal population estimates based on the 1990 and 2000 Censuses. Rates for 2000 were based on bridged-race April 1, 2000, census counts. Starting with Health, United States, 2012, rates for 2001–2009 were revised using intercensal population estimates based on the 2000 and 2010 Censuses. Rates for 2010 were based on bridged-race April 1, 2010, census counts. Rates for 2011 and beyond were computed using 2010-based postcensal estimates. See Appendix I, Population Census and Population Estimates. The race groups white, black, American Indian or Alaska Native, and Asian or Pacific Islander include persons of Hispanic and non-Hispanic origin. Persons of Hispanic origin may be of any race. Starting with 2003 data, some states reported multiple-race data. The multiple-race data for these states were bridged to the four separate race categories of the 1977 Office of Management and Budget standards, for comparability with other states. As of January 1, 2016, all states and reporting areas (other than American Samoa) had adopted the 2003 U.S. Standard Certificate of Live Birth. Bridged race categories are still presented in Health, United States to permit trend comparisons. See Appendix II, Race. Interpretation of trend data for Hispanic women should take into consideration expansion of reporting areas. Data for additional years are available. See the Excel spreadsheet on the Health, United States website at: https://www.cdc.gov/nchs/hus.htm.

^{*} Rates based on fewer than 20 births are considered unreliable and are not shown.

¹Live births per 1,000 population.

²Total number of live births regardless of age of mother per 1,000 women aged 15–44.

³Prior to 1997, data are for live births to mothers aged 45–49 per 1,000 women aged 45–49. In subsequent years, rates were computed by dividing the number of births to women aged 45 and over by the population of women aged 45–49. See Appendix II, Age.

⁴Live births are tabulated by race of child. See Appendix II, Race.

⁵Live births are tabulated by race and Hispanic origin of mother. See Appendix II, Race.

⁶Prior to 1993, data from states that did not report Hispanic origin on the birth certificate were excluded. See Appendix II, Hispanic origin. Rates in 1985 were not calculated because estimates for the Hispanic and non-Hispanic populations were not available.
