¹A person was defined as uninsured if he or she did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. A person was also defined as uninsured if he or she had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care.

²Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or purchased through local or community programs. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of persons were covered by both public and private plans and were included in both categories.

³Includes Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of persons were covered by both public and private plans and were included in both categories.

⁴The estimates are based on a sample of the population and therefore are subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Quarterly estimates have larger standard errors than annual estimates due to smaller sample sizes, and this should be taken into account when evaluating the statistical significance of differences between groups and

changes over time. Estimates with larger standard errors are less reliable and less precise than estimates with smaller standard errors.

NOTES: These health insurance estimates are being released prior to final data editing and final weighting, to provide access to the most recent information from the National Health Interview Survey. The resulting estimates for persons without health insurance are generally 0.1–0.3 percentage points lower than those based on the editing procedures used for the final data files. Occasionally, due to decisions made for the final data editing and weighting, estimates based on preliminary editing procedures may differ by more than 0.3 percentage points from estimates based on final files. The estimates for 2013 are based on data collected from January through September. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2010–2013, Family Core component.

2013 (Jan.–Sept.)	25.0 (0.65)	50.6 (1.00)	25.9 (0.84)
Q1	25.5 (1.16)	50.6 (1.58)	25.0 (1.37)
Q2	23.6 (1.23)	50.8 (1.68)	26.7 (1.32)
Q3	25.9 (1.23)	50.3 (1.45)	26.0 (1.25)

¹A person was defined as uninsured if he or she did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. A person was also defined as uninsured if he or she had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care.

²Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or purchased through local or community programs. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of persons were covered by both public and private plans and were included in both categories.

³Includes Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of persons were covered by both public and private plans and were included in both categories.

⁴The estimates are based on a sample of the population and therefore are subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Quarterly estimates have larger standard errors than annual estimates due to smaller sample sizes, and this should be taken into account when evaluating the statistical significance of differences between groups and changes over time. Estimates with larger standard errors are less reliable and less precise than estimates with smaller standard errors.

NOTES: These health insurance estimates are being released prior to final data editing and final weighting, to provide access to the most recent information from the National Health Interview Survey. The resulting estimates for persons without health insurance are generally 0.1–0.3 percentage points lower than those based on the editing procedures used for the final data files. Occasionally, due to decisions made for the final data editing and weighting, estimates based on preliminary editing procedures may differ by more than 0.3 percentage points from estimates based on final files. The estimates for 2013 are based on data collected from January through September. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

Q3	12.0 (0.54)	80.0 (0.66)	9.6 (0.44)

¹Based on family income and family size, using the U.S. Census Bureau's poverty thresholds. "Poor" persons are defined as those below the poverty threshold; "Near-poor" persons have incomes of 100% to less than 200% of the poverty threshold; and "Not-poor" persons have incomes of 200% of the poverty threshold or greater. Persons with unknown poverty status are not shown in this table. The percentage of respondents with unknown poverty status was 12.2% in 2010, 11.5% in 2011, 1.4% in 2012 and 10.2% in the first three quarters of 2013. Estimates may differ from estimates that are based on both reported and imputed income. FPL is federal poverty level.

²A person was defined as uninsured if he or she did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. A person was also defined as uninsured if he or she had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care.

³Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or purchased through local or community programs. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of persons were covered by both public and private plans and were included in both categories.

⁴Includes Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of persons were covered by both public and private plans and were included in both categories.

⁵The estimates are based on a sample of the population and therefore are subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Quarterly estimates have larger standard errors than annual estimates due to smaller sample sizes, and this should be taken into account when evaluating the statistical significance of differences between groups and changes over time. Estimates with larger standard errors are less reliable and less precise than estimates with smaller standard errors.

NOTES: These health insurance estimates are being released prior to final data editing and final weighting, to provide access to the most recent information from the National Health Interview Survey. The resulting estimates for persons without health insurance are generally 0.1–0.3 percentage points lower than those based on the editing procedures used for the final data files. Occasionally, due to decisions made for the final data editing and weighting, estimates based on preliminary editing procedures may differ by more than 0.3 percentage points from estimates based on final files. The estimates for 2013 are based on data collected from January through September. Data are based on household interviews of a sample of the civilian noninstitutionalized population.
