Description

NHSN contains several analysis data sets used as the basis for documenting, organizing, and analyzing data entered into NHSN. Each user who has rights to access NHSN data for a facility or group has his/her own analysis datasets. When running NHSN Analysis Reports, data is pulled from one or more of these NHSN analysis data sets. Users have the option to run defaults analysis reports, but additionally, each report can be modified using available selection criteria to meet a group or facility's analytical needs. However, users may also wish to use their NHSN generated analysis data sets to create external reports, in conjunction with data automations outside of NHSN, or to perform other analyses with their NHSN data. This quick reference guide will outline the basics for exporting an entire analysis data set or a modified analysis data set. In the example outlined below, an inpatient rehabilitation facility (IRF) Catheter-associated urinary tract infection (CAUTI) analysis data set is modified to reflect only data that would be reported to CMS as part of the IRF Quality Reporting Program.

Generate New Analysis Data Sets

Generating new data sets is the first step to exporting an entire data set or a modified analysis data set. When analyzing data in NHSN, users are using a copy of the facility or group's data and not the live database of data. Therefore it's extremely important that users generate data sets before beginning the export process. This ensures that the data contained within the analysis data sets are up-to-date.

Modifying an Analysis Report Data Set for Export

To begin, select Analysis on the NHSN home screen. Then select "Reports" from the dropdown menu to open the Analysis Reports page. Expand the folder of the HAI type to be exported. For example, users seeking to export a modified version of the IRF "bs2_CLAB_RatesICU" analysis data set should expand the "Device-Associated (DA) Module" folder and the "Urinary Catheter-Associated UTI" folder. After locating the desired Analysis Data Set, follow the steps below.

 Select the desired analysis report. This example uses "Rate Table – CAU Data for ICU-Other/SCA/ONC". From the dropdown menu, choose "Modify Report". Do not choose "Export Data Set" at this point. Choosing "Export Data Set" now exports the complete, unmodified data set.

∔ 🛅 Urina	ry Catheter-Associated	UTI			
	ine Listing - All CAU Ever	nts			
F 🚽 🖡 F	requency Table - All CAU	J Events

	VICU				
\$	Modify Report	NICU			
I	Export Data Set	:AU Data			
эк э	UK - Acute Care Hospita	Catheter Device Use			
cin C	ID Critical Access Lloopi	tala CALL Data			

2. On the Modify screen, modify the report using the Time Period, Filters, and Display Options tab. The "Time Period" tab allows user to choose a beginning and end date for the data included in the analysis data set. The Date Variable can modified by months (summaryYM), quarters (summaryYQ), half years (summaryYH), or years (summaryYR). Use summaryYQ to choose a quarter or quarters that correspond to a specific CMS Reporting period.

Title/Format	Time Period	Filters	Display Optio	ons
Time Deriod:				
Date Variable	e Beginning	7	Ending	
summaryYQ 🔪	✓ 2017Q1	201	7Q1	& Clear Time Period
_				Dun hutton

3. Use the "Filters" tab to modify the report to meet specific requirements or omit unrequired data from the modified analysis data set. Users can add groups and rules by pressing the green "Add group" and "Add rule" buttons on the filters screen.

itle/Format Time Period Filters	Display Options	
dditional Filters: 😰 Show 🗶	Clear	
AND OR		
AND OR		
└ └ ─ ─ ─ ─ ─		[

4. Rules that can be applied using the "add group" button are available in a dropdown menu. After selecting "add group", choose which rules you would like to apply to the data set. This will filter the data included in the analysis data set. Check the "Show Descriptive variable Names" box above the modify screen tabs to show more descriptive names for the variables.

Show descriptive variable names (Prin	t List)	
Title/Format Time Period	Filters Display Options	Show descriptive variable names (Print List)
Additional Filters: 😰 Show	🛠 Clear	Title/Format Time Period Filters Display Option
AND OR		Additional Filters: 😰 Show 🗶 Clear
AND OR CathDU CAUCount CAURate CCN location locationType locCDC locLabel medtype numpatdays numSampPatDays numSampPatDays numSampVCathDays numcathdays OID orgID sampMethUCathDays summaryYH summaryYM summaryYY utiPlan		AND OR AND OR CA UTI Count CA UTI Rate Cath Util Ratio CAU Plan? CDC Location CMS Certification Number Facility Org ID Location Location Label Location Type OID of Facility Patient Days Sample Number of Patient Days Sample Number of Urinary Catheter Days? Sample Number of Urinary Catheter Days? Summary-Yr Summary-Yr Summary-Yr/Half Summary-Yr/Qtr Type of Affiliation

The "Filters" tab can be very useful when a facility wants to limit an analysis data set based on a set of known criteria. For this example, a rehabilitation facility is using the rate table report to create an analysis data set that only includes in-plan locations that should be reported to CMS. Rehabilitation facilities are required to report adult and pediatric medical wards for CAUTI data.

National Center for Emerging and Zoonotic Infectious Diseases Division of Healthcare Quality Promotion

Therefore, the facility would use the "Filters" tab to change the included data to include only data from locations where "utiplan" equals "Y". The descriptive variable names indicate that this means only include data from locations where "CAUTI Plan?" equals "Yes".

Modify "SIR - CAU Data for IRFQR"
