To Whom This May Concern,

I've been very interested about the information given to the public about the cancer study at IBM in Endicott, New York. My husband worked at the Endicott plant for years in the Department also worked with many chemicals. He would come home and tell me and our children how he would have to put on these white suits to keep them safe from the chemicals

He left IBM for another company in . Soon after he had started his new job he became very ill. After under going many tests and biopsy's we were given the dreadful news that my husband had a very rare cancer. My husband was diagnosed with adrenal cancer. This was . The doctors said he had 1 to 5 years. My oldest son just started his 1<sup>st</sup> year in college and my other children were and years old at the time of his death. My husband died 3 months after the initial diagnosis. He died

I hope after reading my letter you will give the cancer study a first priority.

Sincerely,

I can be contacted by calling my home.
