Please consider allowing individual IBM employees, former employees and retired employees to submit their individual cancer experiences by name or employee number. This can be used to verify the accuracy and completeness of the IBM data. I am a retired IBM employee who contracted cancer in the early 1980s. This was at the time when severe work force reductions were taking place in Endicott and non-essential workers were being let go and procedures were being down played. I suspect that my cancer episode was probaly not reported within the company during those hectic times.....thank you for considering this request;

08.21.07
