

# Protecting Privacy in Syndromic Surveillance (MD 5 Hashing)

May 24<sup>th</sup> – 27<sup>th</sup>, 2004

Bryant T. Karras MD

Clinical Informatics Research Group

Biomedical and Health Informatics

*Northwest Center for Public Health Practice*

*University of Washington*

**CIRG**  
Clinical Informatics  
Research Group

- **Bryant T Karras MD**, Assistant Professor Health Services and Biomedical & Health Informatics, University of Washington – Seattle
- **Matt Barclay**, Senior Programmer, Health Services University of Washington – Seattle
- **David Bliss**, Security and Systems Administrator, Health Services University of Washington – Seattle
- **Bill Lober MD**, Research Assistant Professor Biomedical & Health Informatics and Health Services, University of Washington – Seattle

# Outline

- Why collect, why protect
- Possible approaches
- Details of MD5 cryptographic hash
- Example of de-identification in use
