

Appendix C

Questionnaire Development: State Testing Results

1. Pretest (Cognitive Testing) & Field Testing Results for State-Developed Questions

Protocol Development Task

Describe the **pretests (cognitive interviews and/or field testing)** for state-developed questions, including descriptions of the participants, locations, and results. For all states, state-developed questions will require testing by the state in both mail and telephone formats. If the state chooses to conduct the web survey, testing is also required for the web format. For those states that conduct surveillance in both English and Spanish, state-developed questions will require testing by the state in both languages.

2. Testing Results for State Questionnaire

Protocol Development Task

Describe the testing procedures for the **flow assessment** used to evaluate comprehension and flow of the complete <STATE> questionnaire, including descriptions of the participants, locations, and results. The <STATE> questionnaire will require testing by the state in both mail and telephone formats and web format, if applicable. For those states that conduct surveillance in both English and Spanish, the <STATE> questionnaire will require testing by the state in both languages.

This testing is only required after a major revision in which the entire survey has been changed.
