Self Reported HIV Test Results				
01 - Positive The patient reports that his/her HIV serostatus is positive based on a confirmatory test result. 02 - Negative The patient reports that his/her HIV serostatus is negative. 03 - Preliminary positive The patient reports that he/she received a "Preliminary positive" test result (i.e., the patient had a reactive HIV rapid test but did not receive the results of the associated conventional confirmatory test). 04 - Indeterminate The patient reports that he/she received an "Indeterminate" test result (i.e., the patient received results but those results did not conclusively indicate whether he/she is HIV-positive or HIV-negative). 66 - Not asked The provider did not ask the patient about his/her HIV serostatus. 77 - Declined The patient declines or is unwilling to report his/her HIV serostatus. 99 - Don't know The patient reports that he/she is unaware of his/her HIV serostatus				

Confirmation of Self Reported HIV Result

- 01 - Positive/Reactive:** A test result that is reactive on an initial ELISA test, repeatedly reactive on a second ELISA run on the same specimen, and confirmed positive on a Western blot or other supplemental test indicating that the patient is infected with HIV.
- 02 - NAAT-positive:** A test result that was previously negative or indeterminate but is reactive based on a nucleic acid testing.
- 03 - Negative:** A test result that is non-reactive on an initial ELISA test indicating the absence of HIV infection or ELISA was repeatedly reactive and a confirmatory test (Western Blot or IFA) was negative.
- 04 - Indeterminate:** A test result that has not been precisely determined. A possible result of a Western-blot, which might represent a recent HIV infection or a false positive.
- 05 - Invalid:** The test result cannot be confirmed due to conditions related to errors in the testing technology, specimen collection, or transport.
- 06 - No result:** No result was obtained even though the specimen was drawn (e.g., blood sample hemolyzed, blood tube broke, blood tube lost in transit, unable to draw blood from veins).

	Interview Type
	O - <i>Original Interview</i> the initial interview with an infected patient. R - <i>Re-Interview</i> any interview after the Original Interview of an infected patient. C - <i>Cluster Interview</i> any interview of a partner, social contact, or associate to better understand a social/sexual network. U - <i>Unable to interview</i> may include situations where the original patient was not interviewed, but partner, social contact, or associate were initiated from other activities.
	Referral
	1 - <u>Patient (Client)</u> : No health department involvement in the referral of this partner, social contact, or associate. 2 - <u>Provider</u> : DIS or other health department staff were involved in the referral of this partner, social contact, or associate. 3 - <u>Dual</u> : The HIV-infected patient informs the partner of his/her serostatus in the presence of the PS provider. 4 - <u>Contract</u> : The PS provider and HIV-infected patient negotiate a time frame for the patient to inform his or her partners of their possible exposure to HIV. If the patient is unable to inform a partner within an agreed-upon time, the provider has the permission to notify and refer partners to HIV counseling, testing, and other support services. 5 - <u>Third Party</u> : Notification of patient conducted by non-health department provider.
