***Imputability**

Which best describes the relationship between the transfusion and the reaction?

☐ No other potential exposures to the pathogen could be identified in the recipient.
☐ Evidence is clearly in favor of a cause other than transfusion, but transfusion cannot be excluded.
☐ There is conclusive evidence beyond reasonable doubt of a cause other than the transfusion.
☐ The relationship between the adverse reaction and the transfusion is unknown or not stated.

Check all that apply:

☐ Evidence of the pathogen in the transfused component.
☐ Evidence of the pathogen in the donor at the time of donation.
☐ Evidence of the pathogen in an additional component from the same donation.
☐ Evidence of the pathogen in an additional recipient of a component from the same donation.
☐ Evidence that the identified pathogen strains are related by molecular or extended phenotypic comparison testing with statistical confidence ($p<0.05$).
☐ Evidence that the transfused component was negative for this pathogen at the time of transfusion
☐ Evidence that the donor was negative for this pathogen at the time of donation.
☐ Evidence that additional components from the same donation were negative for this pathogen.
☐ Evidence that the recipient was not infected with the pathogen prior to transfusion.
☐ Laboratory evidence that the recipient was infected with this pathogen prior to transfusion.

Did the transfusion occur at your facility? ☐ YES ☐ NO
