

CDC FOUNDATION

Helping CDC Do More, Faster

The CDC Foundation is an independent, nonprofit 501(c)(3) organization that forges effective partnerships between CDC and others to fight threats to health and safety.

CDC Foundation partners include:

- corporations & businesses
- foundations
- nonprofit organizations
- educational institutions
- individuals
- government agencies

Our Partners

BILL & MELINDA
GATES foundation

Robert Wood Johnson
Foundation

Johnson & Johnson

Working with Visionaries on the
Frontlines of Social Change Worldwide

Battelle
The Business of Innovation

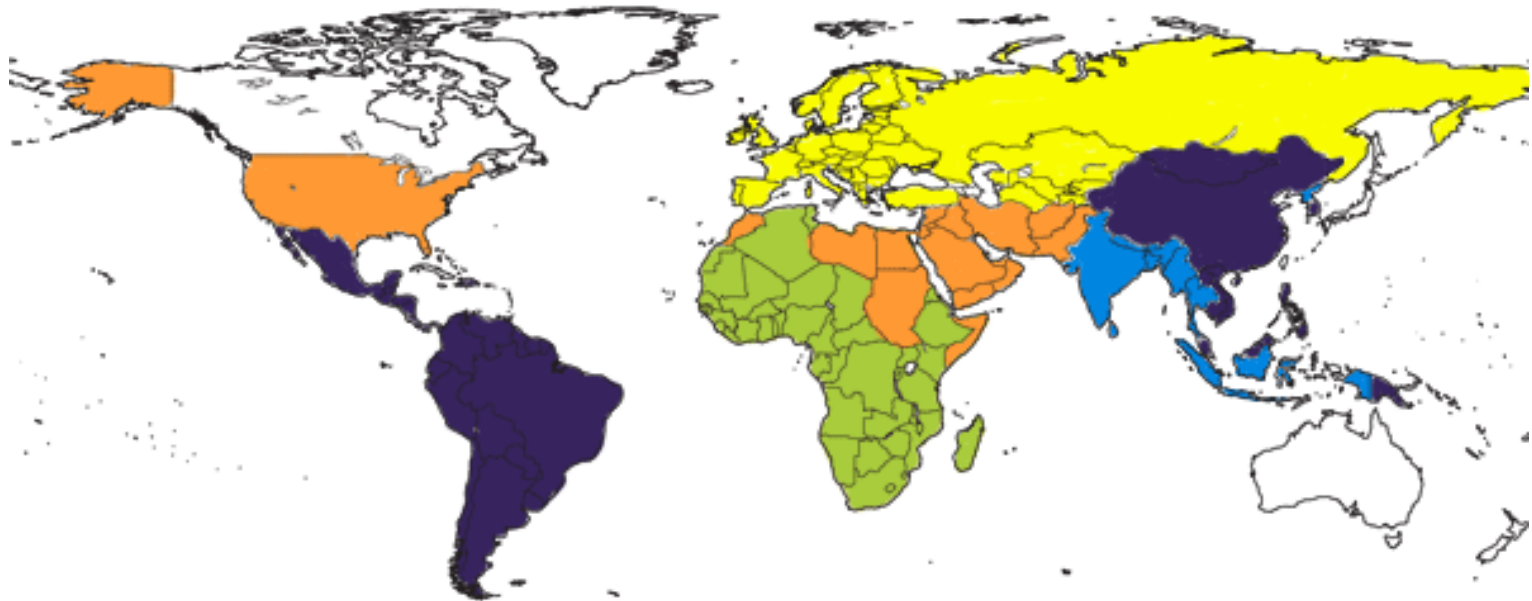

Bloomberg Philanthropies

The Annie E. Casey Foundation

CDC Foundation Projects Span the Globe

The CDC Foundation currently manages approximately 200 active programs with CDC in the U.S. and 34 countries around the world.

Since 1995, the CDC Foundation has raised more than \$250 million to help CDC battle health threats like cancer, terrorism, violence, obesity and emerging diseases.

Working with NHANES

If your organization and NCHS have a common interest it may be possible to include questions, examinations, or laboratory measurements to an upcoming survey.

The CDC Foundation can accept funding from private organizations to reimburse CDC's cost of the additions.

Working with NHANES

Step One: Speak with CDC to discuss potential common interests. Must have scientific merit, show public health impact, etc.

Step Two: If mutual interest is identified, CDC/CDC Foundation will develop a budget and scope of work

Step Three: The Foundation will execute an agreement with private organization, based on SOW and budget, and accept the funds.

Working with NHANES

Step Four: The Foundation will execute a mirror agreement with CDC to execute the work.

Step Five: The Foundation will keep donor updated on progress through regular reports

Prevalence of Erectile Dysfunction

Two donors provided funding to the CDC Foundation to add a question to the computer-assisted interview portion of the 2001 NHANES.

This involved incorporating the question into the survey, pilot testing the module and total implementation

In 2001-2002 over 2,000 men over the age of 20 were interviewed. Only 2.1% of the respondents refused to answer.

Data on ED was released to the public in 2004.

Inflammatory Back Pain/Ankylosing Spondylitis

In 2008, several organizations pooled resources to help determine the prevalence of inflammatory back pain in the population

This project required the addition of new questions, three arthritis related body measures and laboratory measurements.

Oregon Health Plan (OHP)

OHP provides health insurance to uninsured low income adults through a lottery selection process

The state wanted to study the effects of health insurance on this population and were able to follow a cohort who received OHP coverage and one who did not.

NHANES provided technical assistance for all study and data collection and IT methodologies.

Together we can close the gap between public health needs and solutions.
