

2015 National Conference on Health Statistics

Ellen Kurtzman, M.P.H., R.N., FAAN

2014 NCHS/AcademyHealth Health Policy Fellow

Agenda

The nurse practitioner (NP) landscape

- **What roles do NPs play in the delivery of primary care?**
- **How are these roles similar/different than other practitioners?**

Availability of data for research

- **What are the primary sources of NP data?**
- **What data are needed and what limits their availability?**

**There are more than 3 million RNs
in the U.S.**

A. TRUE

B. FALSE

Nursing Today—3.1 Million Largest Health Care Workforce

Source: 1980-2008 National Sample Survey of Registered Nurses

The term “advanced practice nurse” refers to nurses who...

- A. Are in the process of becoming “registered”**
- B. Have advanced education and specialized clinical training**
- C. Must be employed and supervised by a physician**
- D. Are independent practitioners**

Advanced Practice Registered Nurse

Broad classification that includes nurse practitioners, nurse midwives, nurse anesthetists, and clinical nurse specialists

- **Have advanced education and specialized clinical training**
 - Certifying boards currently require a minimum of a master's degree
- **Licensed to deliver care consistent with their areas of expertise and state laws that govern their scope of practice**
- **Diagnose and manage common acute and chronic diseases, order diagnostic tests, prescribe medications, and perform minor procedures**

In the U.S., approx. 250,000+ (8.2%) RNs prepared as APRNs (2008)

Which of the following is not an abbreviation for an advanced practice RN (APRN)?

- A. CNM
- B. CNP
- C. CFRN
- D. CRNA

NPs—Largest Group of APRNs

Decades of Growth in the Nurse Practitioner Workforce

Source: Auerbach, 2012

Source: Morgan, Everett, Hing, 2014

NPs—Fastest Growing Primary Care Workforce

Supply of Primary Care Professionals

	Number of primary care professionals		Number of primary care professionals per 100,000 people		Average annual percentage change per capita
	Base year	Recent year	Base year	Recent year	
Primary care physicians	208,187	264,086	80	90	1.17
Physician assistants	12,819	23,325	5	8	3.89
Nurse practitioners	44,200	82,622	16	28	9.44
Dentists	118,816	138,754	46	47	0.12

Source: GAO, 2008

Nurse Practitioners As Primary Care Practitioners

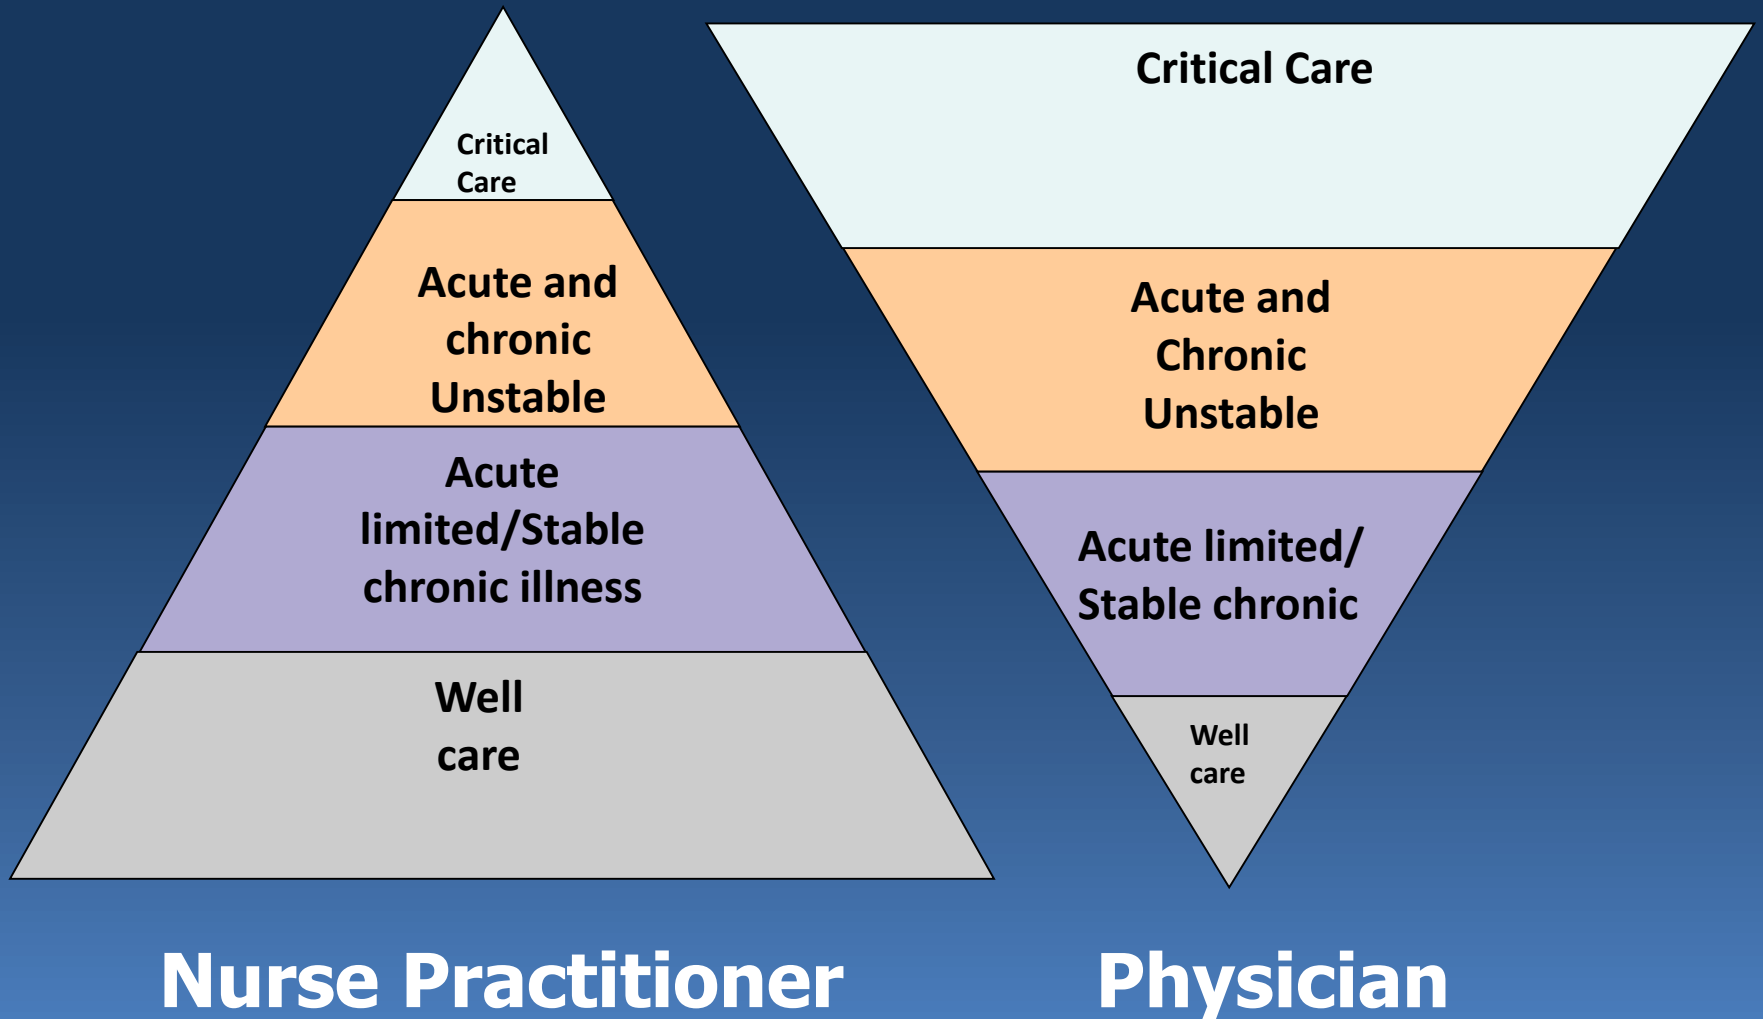

- **Estimated 200,000+ NPs nationwide (*AANP National NP Database, 2014*)**
- **Work across populations with “roots” in rural/frontier health and primary care—e.g., family practice**
- **70–80% practice in primary care—(i.e., pediatrics, adult health, geriatrics, women’s health)**
- **20% practice in rural settings**
- **7,000 new graduates annually; 4 out of 5 prepared to deliver primary care**
- **Provide a range of services including:**
 - Counseling and educating patients and their families
 - Caring for common medical problems and chronic conditions
 - Providing preventive care—physical exams, screenings and immunizations

NP Practice Patterns

	Services provided to:				Total
	Most patients	Some patients	Few patients	No patients	
	Percent				
Counsel and educate patients and families	85.6	11.9	2.0	0.5	100.0
Conduct physical examinations and obtain medical histories	83.9	11.0	2.9	2.2	100.0
Prescribe drugs for acute and chronic illnesses	80.4	12.3	3.6	3.7	100.0
Order, perform, and interpret lab tests, x-rays, EKGs, and other diagnostic studies	75.4	17.6	4.9	2.1	100.0
Diagnose, treat, and manage acute illnesses	68.3	21.0	7.1	3.5	100.0
Diagnose, treat, and manage chronic illness	60.9	24.2	10.0	4.9	100.0
Provide preventive care including screening and immunizations	55.0	19.8	15.1	10.1	100.0
Provide care coordination	53.3	30.2	12.7	3.8	100.0
Make referrals	46.1	41.4	10.2	2.3	100.0
Perform procedures	26.2	30.3	25.8	17.7	100.0

Model for MD/NP Practice

Which is true?

- **Most states require physician oversight of NPs**

 **NPs are reimbursed at ~~90%~~ of the physician fee schedule under Medicare**

85%

Existing Sources of NP Data

Category/Type	Examples of Existing Source(s)
Public health, safety, quality, disparities	NCHS (<i>National Ambulatory Medical Care Survey [NAMCS]</i> , <i>National Hospital Ambulatory Medical Care Survey [NHAMCS]</i>), AHRQ
Care delivery	VA, IHS, DOD, providers, retail clinics
Payment, reimbursement, billing, cost of care, claims	CMS (Medicare & Medicaid), private insurers
Labor market conditions and trends, workforce planning and policy	HRSA, DOL (BLS), state nursing workforce centers, educational institutions, employers
Occupational licensing, regulation, enforcement	state boards of nursing, DEA
Self-regulation, professionalism	professional organizations and societies, credentialing bodies, educational institutions

Data Limitations and Other Challenges in NP Research

Historical focus on physician workforce and relative size of NP workforce

- **Exclusion of non-physicians and/or
aggregation of dissimilar practitioners**
- **Confounded by emergence of team-based
care**

Billing/payment practices

- **Incentive to bill “incident to”→NP invisibility**
- **Number of payers and variation in data
collection and availability**
- **Heightened by emergence of performance-
based payment**

Data Limitations and Other Challenges (cont.)

Variation in regulatory restrictions and physician oversight

- **“Patchwork” of scope of practice policies**

Limitations of survey data

- **Response rate, sample size**
- **Definitional issues**
- **Documentation adequacy**
- **Self-report, recall bias**

Scope and availability of proprietary data

Optimizing NP Data Availability

- 1. Adopt new paradigm—provision of care by a complement of clinicians**
- 2. Establish data collection best practices**
- 3. Modify and standardize data collection vehicles**
- 4. Decouple care from billing/payment**
- 5. Secure additional funding and resource support**
