Best Practices

Pfizer-BioNTech COVID-19 Vaccine in multiple dose vials, single-dose vials and plastic manufacturer-filled syringes should be:

- Stored at ultra-cold frozen temperatures until the expiration date. Use storage labels to help staff easily identify the correct product based on the recipient's age.
- Stored at refrigerated temperatures for up to 10 weeks. Use these tracking labels to identify when the beyond-use date for refrigerated storage has been reached.
- Do NOT use vaccine after the beyond-use date or expiration date, whichever comes first.

Pfizer-BioNTech COVID-19 Vaccine in glass manufacturer-filled syringes should be:

- Stored at refrigerated temperatures until the expiration date.
- Do NOT freeze.

Transport in a portable ultra-cold freezer, refrigerator or container qualified to maintain the appropriate temperatures with a digital data logger to monitor the temperature for up to 12 cumulative hours.
