Introduction

Purpose The YRBS Combined Datasets contain data from YRBS surveys conducted from 1991-2021 nationwide for the United States overall and in multiple states and districts from 1991 - 2021. The purpose of the Combined Datasets is to facilitate YRBS data analyses that require data from multiple years and/or multiple surveys.

2021 YRBS Combined Datasets User's Guide

Background

The YRBS Combined Datasets include YRBS survey data from all national and the majority of weighted national, state, and large urban school district surveys conducted from 1991 to 2021.

Reasons to combine YRBS datasets include:

- to increase analytic sample size
- to increase the represented area or population (i.e., a region of the country)
- to identify changes in prevalence of a behavior across time (i.e., trend analysis)

The Combined Datasets provide several advantages to analysts:

- The variables in the Combined Datasets have been standardized across survey years. The variable Q27, for instance, means the same thing across all years of data. Analysts do not have to crosswalk the questionnaires and variables across multiple survey years themselves.
- The Combined Datasets contain results from multiple state and district surveys. Analysts do not have to get individual files from individual surveys and combine them.

Limitations to consider include:

- All surveys are not in the dataset. State and district YRBS datasets are owned and controlled by the health and education agencies that conducted the surveys. Some of these agencies did not give CDC permission to include their data in the Combined Datasets. Therefore, some analyses conducted using the Combined Datasets may produce results that do not match results previously published by CDC. Refer to the “YRBSS Participation History & Data Quality” table on the “YRBSS Participation” page at www.cdc.gov/yrbss for more information about surveys conducted and data availability.
- The Combined Datasets are based on the 2021 YRBS standard questionnaire and include data from selected optional YRBS questions. Datasets from earlier years will have more missing data because questionnaires from earlier years did not include the same standard questions as the 2021 questionnaire did.
- Many state and district surveys do not include all of the 2021 standard YRBS questions. Some surveys delete some standard questions from their questionnaires. Data will be missing from some surveys for some variables due to these deletions. Many state and district surveys do not include all the standard questions in their questionnaires. Most standard questions are asked but some data will be missing from some state and local surveys.

2021 YRBS Combined Datasets User's Guide

Data File Structure

The datasets are split into four groups due to large file sizes. The split files make it easier to download just the file(s) of interest. The datasets are split as follows:

1. National data
2. Data from states with names beginning with A through D
3. Data from states with names beginning with E through H
4. Data from states with names beginning with I through L
5. Data from states with names beginning with M through P
6. Data from states with names beginning with Q through T
7. Data from states with names beginning with U through Z
8. District data

Data for each group are provided in MS Access and ASCII data formats. The MS Access files are posted as zip files to make downloading them easier. The ASCII files can be read by common statistical packages. Programs to read the data in SAS and SPSS are posted on the website. A program to create a SAS format library is also posted on the website.

Refer to the “Data & Documentation” page at www.cdc.gov/yrbss for details about file names, downloading the data, and how to use the SAS and SPSS programs.

Surveys Included in the Combined Datasets

Data Inclusion Criteria All national surveys conducted between 1991 and 2021 are included.

State and district surveys are included in the Combined Datasets if:

- they were conducted between 1991 and 2021,
- they were a high school survey,
- the data were weighted, and
- the state or district health or education agency conducting the survey gave CDC permission to include the data in the Combined Datasets or the data come from the national YRBS survey.

Note: The state and district health and education agencies that conduct a YRBS survey with technical and financial assistance from CDC own and control access to their data. Some sites of these agencies did not grant CDC permission to include their data in the Combined Datasets.

Refer to the “YRBSS Participation History & Data Quality” table on the “YRBSS Participation” page at www.cdc.gov/yrbss for more information about surveys conducted and data availability.

Survey Inclusion by Year Refer to Appendix A for the number of records available by survey and by year.

No records in a given year means that:

- the survey was not conducted in that year or
- the survey was conducted but the response rate was not sufficient to allow the data to be weighted or
- the survey was conducted in the 2021 survey cycle but the response rate was less than 60% and nonresponse bias analysis results suggested that data were not representative of their respective population

Variables Included in the Combined Datasets

Categories of Variables Included

Seven kinds of variables are included in the Combined Datasets:

- Sample variables
- Demographic variables
- Body mass index (BMI) variables
- Sexual minority variables
- 2021 questionnaire variables,
- 2021 supplemental variables, and
- Selected additional risk behavior optional question variables.

Some surveys delete some standard questions from their questionnaires. Data will be missing from some surveys for some variables due to these deletions. Many state and district surveys do not include all the standard questions in their questionnaires. Most standard questions are asked but some data will be missing from some state and local surveys.

The combined datasets include 2021 data and data from previous years that map to 2021 questions. Datasets from earlier years will have more missing data because questionnaires from earlier years did not include the same standard questions as the 2021 questionnaire did.

Race and ethnicity questions have changed over time. Race4 and race7 are coded to bridge over these changes to provide a 4- or 7-level indicator appropriate for all years.

Refer to [YRBS Questionnaire Content](#) for information about specific questions asked in a given year.

Refer to the [2021 YRBS Data User's Guide](#) for details on how race/ethnicity variables are edited and calculated.

2021 YRBS Combined Datasets User's Guide

Body Mass Index (BMI) Variables

Body mass index (BMI), body mass index percentile, an obesity indicator, and an overweight indicator are calculated from self-reported height and weight.

Variable	Description

qnobt	Overweight indicator

Refer to Appendix C and the [2021 YRBS Data User's Guide](#) for details on how these variables are edited and calculated.

Sexual Minority Variables

Sexual minority variables for surveys that included the questions include two variables from the original questions measuring sexual identity and sex of sexual contacts and four variables that categorize the responses from those questions. Sexpart and sexpart2 of sexual contacts are calculated by crossing the responses to "What is your sex?" and "During your life, with whom have you had sexual contact?"

Variable	Description
Q65	Data from: Which of the following best describes you? A. Heterosexual (straight) B. Gay or lesbian C. Bisexual D. I describe my sexual identity some other way E. I am not sure about my sexual identity (questioning) F. I do not know what this question is asking

2021 YRBS Combined Datasets User's Guide

Q64	<p>Data from:</p> <p>During your life, with whom have you had sexual contact?</p> <p>A. I have never had sexual contact</p> <p>B. Females</p> <p>C. Males</p> <p>D. Females and males</p>
sexid	<p>Sexual identity:</p> <p>1 = "Heterosexual"</p> <p>2 = "Gay or Lesbian"</p> <p>3 = "Bisexual"</p> <p>4 = "Other"</p> <p>5 = "Questioning"</p>
sexid2	<p>Collapsed sexual identity:</p> <p>1 = "Heterosexual"</p> <p>2 = "Sexual Minority" (includes students who responded that they were gay or lesbian or bisexual)</p> <p>3 = "Other/Questioning"</p>
sexpart	<p>Sex of sexual contact(s):</p> <p>1 = "Never had sex"</p> <p>2 = "Opposite sex only"</p> <p>3 = "Same sex only"</p> <p>4 = "Both Sexes"</p>
sexpart2	<p>Collapsed sex of sexual contact(s):</p> <p>1 = "Never had sex"</p> <p>2 = "Opposite sex only"</p> <p>3 = "Same sex only or both sexes"</p>

Refer to Appendix B for a list of surveys that included the sexual identity question and/or the sex of sexual contact question.

Refer to the [How to Analyze YRBS Sexual Minority Data](#) for details on best practices for analyzing data from the sexual identity and sex of sexual contacts questions.

Note: Starting with the 2015 YRBS cycle, the questions measuring sexual

2021 YRBS Combined Datasets User's Guide

identity and sex of sexual contact were included on the national YRBS questionnaire and the standard questionnaire that state and local health and education agencies use to develop their own YRBS questionnaire. Most but not all agencies chose to keep these questions in their 2021 YRBS questionnaire. In 2021, the sexual identity question was revised to add a few new response options.

2021 Questionnaire Variables

2021 questionnaire variables in original and dichotomized versions.

Variable	Description
q8-q63 q66-87	Original data from questions 8 through 63 or 66 through 87 on the 2021 YRBS standard questionnaire. They are named with a “q” followed by the question number.

The dichotomous variables are set to “1” when the student responds with an answer that is in the response(s) of interest (ROI). Students that respond otherwise are set to “2.” Dichotomized variables are help analysts easily analyze risk behaviors in a way that reflects terms of broad interest.

Refer to Appendix C for detailed specifications on the questionnaire variables, what each dichotomous variable represents, and how they are calculated.

Refer to the [2021 YRBS Data User's Guide](#) for more explanation of dichotomous variables.

Analytic Considerations

Introduction

Important analytic considerations include

- Software requirements
 - Minimum cell size
 - Combining state and district datasets
-

Software Requirements

The YRBS uses a multi-stage cluster sample design. Statistical software used to analyze YRBS data should account for this design. Many packages with this capability are available.

Refer to [Software for Analysis of YRBS Data](#) for more information on five statistical packages (SUDAAN, SAS, STATA, SPSS, and Epi Info) that can be used to analyze the YRBS.

Minimum Cell Size

CDC analyses of YRBS data now change to use 30 as the minimum cell denominator along with non-response bias analysis.

Note: This refers to the denominator, not numerator. It is possible to have numerators of 0; these are reported as 0% with no confidence intervals.

Combining State and District Datasets

Generally, as long as there is a sufficient number of records, it is recommended that state data be combined only with other states and that districts be combined only with other districts.

It is not recommended to combine state data and district data because of possible overlap between the two and because state data contain both urban and rural students while district data contain only urban students.

Refer to [Combining YRBS Data Across Years and Sites](#) for more information about combining YRBS datasets.

Appendix A: Record Counts by Survey and Year

Appendix A Appendix A contains number of records available by survey and by year. National, state, and district YRBS data come from separate scientific samples of schools and students. National YRBS datasets are not the aggregate of the state YRBS dataset. State and district YRBS dataset are not subsets of the National YRBS data set.

Appendix B: Surveys that Included Sexual Minority Questions

Appendix B Appendix B shows which surveys in the Combined Datasets included one or the other of the sexual minority questions. An “x” indicates that the question was asked for a given survey and year.

Notes:

1. Other YRBS state and district surveys have included the sexual minority questions on their questionnaire but their data are not in the Combined Datasets because the sponsoring health or education agency that conducted the survey did not give CDC permission to include the data.
2. The sexual minority questions were not asked in the national survey YRBS until 2015. In 2021, the sexual identity question was revised to add a few new response options.
