

# ROADMAP FOR BABIES WITH CONGENITAL ZIKA INFECTION

This document should be used as a guide to discuss the screening and testing your baby may receive with his or her primary care provider. Each baby is different, and it is possible that your baby may need more tests or fewer tests. This roadmap outlines care for 1) babies who are born with birth defects or other clinical findings related to Zika virus infection during pregnancy 2) babies who test positive for Zika virus infection but may look healthy at birth.

Follow the roadmap to  check off each **recommended** doctor's visit for the first year of follow up.

- ▶ **Routine well-baby visits** include an exam of how your baby is growing and developing, routine immunizations, guidance about what you might expect, and support for mental and social well-being.
- ▶ You might be referred to a developmental specialist, family support services, and early intervention services. **Your baby's doctor also might recommend you take your baby to a specialist**, or someone who is an expert in a certain type of medicine. Your baby might be referred to an infectious disease specialist, clinical geneticist, neurologist, or other doctor based on the results of his or her screenings and tests.
- ▶ **Talk to your baby's primary care provider about establishing a medical home for your baby.** A medical home is not a place. It is an approach to healthcare that makes sure your baby gets the best, most appropriate services.

**BIRTH**

# APPOINTMENT LOG

Use this table to keep track of your baby's medical appointments.
