

## Physical Examination

### **Description**

Upon arrival, participants had a brief physical examination conducted by a specifically trained physician. The physician did not know the participants' classification at enrollment. The data set includes measurements of basal temperature, weight, height, neck circumference, waist circumference, hip circumference, 30-minute recumbent blood pressure and heart rate, and 5-minute standing blood pressure and heart rate.

Refer to the codebook for the detailed information of each variable.

### **Study Sample**

227 participants in the study completed the physical exam.

### **Data Collection Method**

The physical examination was given at the time of admission by trained physician.
