

“HIV, you may have
tried to take my life,
but with treatment
I took it back.”

Katrina – Decatur, GA
Living with HIV since 2007.

HIV TREATMENT WORKS

One month. That was all it took after starting meds until my HIV was undetectable. I'm a living example that getting into care, listening to your doctor, and staying committed to treatment are key to living well with HIV. Treatment gave me back my life. Now, I spend my time taking care of my family and doing all the things I've always enjoyed.

Get in care. Stay in care. Live well.
