What Is Delayed Prescribing?

WAIT. DO NOT FILL YOUR PRESCRIPTION JUST YET.

\bigcirc	out antibiotics. Continue to monitor your own symptoms over the next few days. Rest.
\bigcirc	Drink extra water and fluids.
\bigcirc	Use a cool mist vaporizer or saline nasal spray to relieve congestion.
\bigcirc	For sore throats in adults and older children, try ice chips, sore throat spray, or lozenges.
\bigcirc	Use honey to relieve cough. Do not give honey to an infant younger than 1.

Waiting to see if you really need an antibiotic can help you take antibiotics only when needed. When antibiotics aren't needed, they won't help you, and the side effects could still hurt you. Common side effects of antibiotics can include rash, dizziness, nausea, diarrhea, and yeast infections.

Antibiotics save lives, and when a patient needs antibiotics, the benefits outweigh the risks of side effects. You can protect yourself and others by learning when antibiotics are and are not needed.
