

## **Maternity Practices in Infant Nutrition and Care in Washington**

In 2007, CDC administered the first national **Maternity Practices in Infant Nutrition and Care** (“mPINC”) survey. All hospitals and birth centers in the U.S. that provide maternity care were invited to participate. This report describes specific opportunities to improve mother-baby care at hospitals and birth centers in Washington in order to more successfully meet national quality of care standards for perinatal care.

For more information about the mPINC survey, visit [www.cdc.gov/mpinc](http://www.cdc.gov/mpinc)

### **Changes in Maternity Care Practices Improve Breastfeeding Rates**

Breastfeeding provides optimal nutrition for infants and is associated with decreased risk for infant morbidity and mortality as well as maternal morbidity.<sup>1</sup> Maternity practices in hospitals and birth centers can influence breastfeeding behaviors during a period critical to successful establishment of lactation.<sup>2</sup> The literature, including a Cochrane review, found that institutional changes in maternity care practices to make them more supportive of breastfeeding increased initiation and duration of breastfeeding.<sup>3</sup>

### Strengths in Breastfeeding Support in Washington Facilities

Pie chart of prevalence	Documentation of Mothers' Feeding Decisions	Staff at 98% of facilities in Washington consistently ask about and record mothers' infant feeding decisions.	Standard documentation of infant feeding decisions is important to adequately support maternal choice.
Pie chart of prevalence	Provision of Breastfeeding Advice and Counseling	Staff at 94% of facilities in Washington provide breastfeeding advice and instructions to patients who are breastfeeding, or intend to breastfeed.	The American Academy of Pediatrics (AAP) recommends pediatricians provide patients with complete, current information on the benefits and methods of breastfeeding to ensure that the feeding decision is a fully informed one. Patient education is important in order to establish breastfeeding.

### Needed Improvements in Washington Facilities

Pie chart of prevalence	Appropriate Use of Breastfeeding Supplements	Only 44% of facilities in Washington adhere to standard clinical practice guidelines against routine supplementation with formula, glucose water, or water.	The American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG) Guidelines for Perinatal Care recommend against routine supplementation because supplementation with formula and/or water makes infants more likely to receive formula at home and stop breastfeeding prematurely.
Pie chart of prevalence	Adequate Assessment of Staff Competency	Only 5% of facilities in Washington annually assess staff competency for basic breastfeeding management and support.	Implementing comprehensive assessment of staff training and skills for basic breastfeeding management and support establishes the foundation for quality infant feeding care. Adequate training and skills assessment are critical to ensure that mothers and infants receive care that is consistent, evidence-based, and appropriate.
Pie chart of prevalence	Adequate Assessment of Staff Competency	Only 23% of facilities in Washington annually assess staff competency for basic breastfeeding management and support.	Implementing comprehensive assessment of staff training and skills for basic breastfeeding management and support establishes the foundation for quality infant feeding care. Adequate training and skills assessment are critical to ensure that mothers and infants receive care that is consistent, evidence-based, and appropriate.
Pie chart of prevalence	Provision of Hospital Discharge Planning Support	Only 32% of facilities in Washington provide hospital discharge care including a phone call to the patient's home, opportunity for follow-up visit, and referral to community breastfeeding support.	The American Academy of Pediatrics (AAP) clinical practice guidelines recommend examination of the newborn by a qualified health care professional within 48 hours of hospital discharge in order to assess breastfeeding. Ensuring post discharge ambulatory support improves breastfeeding outcomes.

## **Breastfeeding is a National Priority**

Breastfeeding protects mothers' and infants' health.<sup>1</sup> *Healthy People 2010*<sup>4</sup> includes breastfeeding as a national priority and it is recommended by a number of health professional organizations.<sup>5</sup>

Establishing evidence-based, breastfeeding-supportive maternity practices as standards of care in US hospitals and birth centers will help meet *Healthy People 2010* breastfeeding objectives and will help improve maternal and child health nationwide.

## **The CDC mPINC Survey**

The CDC mPINC survey was mailed to all US maternity facilities, with the request that it be completed by the person most knowledgeable about the facility's maternity practices related to infant feeding and care.

89% of the 73 eligible hospitals and birth centers in Washington responded to the 2007 CDC mPINC survey.

Each participating facility received its facility-specific benchmark report in October 2008.

For more information about the mPINC survey, visit [www.cdc.gov/mpinc](http://www.cdc.gov/mpinc)

**Results of the 2007 CDC mPINC Survey: Washington**

Washington Composite Quality Practice Score\*: 72

Washington State Rank<sup>+</sup>: 9

mPINC Dimension of Care	Ideal Response to mPINC Survey Question	Percent of Facilities with Ideal Response <sup>‡</sup>	WA Rank <sup>+</sup>	WA Subscale Score* (out of 100)
Labor and Delivery Care				77
	Initial skin-to-skin contact is $\geq 30$ min w/in 1 hour (vaginal births)	57	10	
	Initial skin-to-skin contact is $\geq 30$ min w/in 2 hours (cesarean births)	42	13	
	Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	56	56	
	Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	63	5	
	Routine procedures are performed skin-to-skin	37	7	
Feeding of Breastfed Infants				85
	Initial feeding is breast milk (vaginal births)	86	6	
	Initial feeding is breast milk (cesarean births)	67	15	
	Supplemental feedings to breastfeeding infants are rare	44	4	
	Water and glucose water are not used	72	21	
Breastfeeding Assistance				86
	Infant feeding decision is documented in the patient chart	98	-	
	Staff provide breastfeeding advice & instructions to patients	94	-	
	Staff teach breastfeeding cues to patients	81	17	
	Staff teach patients not to limit suckling time	52	8	
	Staff directly observe & assess breastfeeding	86	22	
	Staff use a standard feeding assessment tool	67	13	
	Staff rarely provide pacifiers to breastfeeding infants	38	12	
Contact Between Mother and Infant				90
	Mother-infant pairs are not separated for postpartum transition	92	-	
	Mother-infant pairs room-in at night	92	-	
	Mother-infant pairs are not separated during the hospital stay	75	1	
	Infant procedures, assessment, and care are in the patient room	30	1	
	Non-rooming-in infants are brought to mothers at night for feeding	81	19	

<b>mPINC Dimension of Care</b>	<b>Ideal Response to mPINC Survey Question</b>	<b>Percent of Facilities with Ideal Response<sup>‡</sup></b>	<b>WA Rank<sup>+</sup></b>	<b>WA Subscale Score* (out of 100)</b>
Facility Discharge Care				53
	Staff provide appropriate discharge planning (referrals & other multi-modal support)	32	14	
	Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	48	10	
Staff Training				43
	New staff receive appropriate breastfeeding education	8	13	
	Current staff receive appropriate breastfeeding education	18	43	
	Staff received breastfeeding education in the past year	33	31	
	Assessment of staff competency in breastfeeding management & support is at least annual	23	49	
Structural & Organizational Aspects of Care Delivery				64
	Breastfeeding policy includes all 10 model policy elements	5	44	
	Breastfeeding policy is effectively communicated	82	23	
	Facility documents infant feeding rates in patient population	52	28	
	Facility provides breastfeeding support to employees	59	27	
	Facility does not receive infant formula free of charge	22	7	
	Breastfeeding is included in prenatal patient education	83	44	
	Facility has a designated staff member responsible for coordination of lactation care	57	41	

\* Facility practices in 7 dimensions of care ("subscales") contribute to the overall "Composite Quality Practice Score." Possible item, subscale, and overall scores range from 0 to 100, with 100 being the highest, best possible score.

<sup>+</sup> State ranks range from 1 to 52, with 1 being the highest rank. In case of a tie, both states are given the same rank.

<sup>‡</sup> Calculation excludes facilities' responses that indicate prevalence is "unknown" for the practice measured in a given item.

- State ranks are not shown for survey questions with 90% or more facilities reporting ideal responses.

## **Improvement is Needed in Maternity Care Practices and Policies in Washington**

Many opportunities exist in Washington to protect, promote, and support breastfeeding mothers and infants. To take action on this critical need, consider the following:

- Examine Washington regulations for maternity facilities and evaluate their evidence base; revise if necessary.
- Sponsor a Washington-wide summit of key decision-making staff at maternity facilities to highlight the importance of evidence-based practices for breastfeeding.
- Pay for hospital staff across Washington to participate in 18-hour training courses in breastfeeding.
- Establish links among maternity facilities and community breastfeeding support networks in Washington.
- Identify and implement programs within hospital settings—choose one widespread practice and adjust it to be evidence-based and supportive of breastfeeding.
- Integrate maternity care into related Quality Improvement efforts including:
  - Consistent delivery of optimal care
  - Improving patient flow
  - Improving patient experience & loyalty
  - Engaging physicians in a shared quality agenda
  - Increasing staff efficiency
  - Optimizing hospital-to-home transitions

- Develop a plan to ensure adherence to the Joint Commission’s recently revised (July 2009) Perinatal Care Core Measure Set to include exclusive breastfeeding at discharge in hospital data collection starting with April 1, 2010, discharges.
