

What is the mPINC Survey?

The Maternity Practices in Infant Nutrition and Care (mPINC) Survey is a national survey from the Centers for Disease Control and Prevention (CDC) that assesses infant feeding care processes, policies, and staffing expectations in maternity care settings.

What is in this report?

This report summarizes results from all Oklahoma facilities that participated in the 2013 mPINC Survey and identifies opportunities to improve mother-baby care at hospitals and birth centers and related health outcomes throughout Oklahoma.

Who participates in the mPINC survey?

All hospitals with maternity services and all free-standing birth centers in the United States are invited to participate in CDC's mPINC survey every two years.

Oklahoma's
mPINC Score:

71

In Oklahoma, 84% of 55 eligible facilities participated in CDC's 2013 mPINC Survey.

Oklahoma Highlights: Strengths

Documentation of Mothers' Feeding Decisions

Staff at 98% of facilities in Oklahoma consistently ask about and record mothers' infant feeding decisions.

Standard documentation of infant feeding decisions is important to adequately support maternal choice.

Availability of Prenatal Breastfeeding Instruction

Most facilities (91%) in Oklahoma include breastfeeding education as a routine element of their prenatal classes.

Prenatal education about breastfeeding is important because it provides mothers with a better understanding of the benefits and requirements of breastfeeding, resulting in improved breastfeeding rates.

Oklahoma Highlights: Opportunities for Improvement

Appropriate Use of Breastfeeding Supplements

Only 33% of facilities in Oklahoma adhere to standard clinical practice guidelines against routine supplementation with formula, glucose water, or water.

The American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG) Guidelines for Perinatal Care recommend against routine supplementation because supplementation with formula and/or water makes infants more likely to receive formula at home and stop breastfeeding prematurely.

Inclusion of Model Breastfeeding Policy Elements

Only 11% of facilities in Oklahoma have comprehensive breastfeeding policies including all model breastfeeding policy components recommended by the Academy of Breastfeeding Medicine (ABM).

The ABM model breastfeeding policy elements are the result of extensive research on best practices to improve breastfeeding outcomes. Facility policies determine the nature of care that is available to patients. Facilities with comprehensive policies consistently have the highest rates of exclusive breastfeeding, regardless of patient population characteristics such as ethnicity, income, and payer status.

Protection of Patients from Formula Marketing

Only 54% of facilities in Oklahoma adhere to clinical and public health recommendations against distributing formula company discharge packs.

Distribution of discharge packs contributes to premature breastfeeding discontinuation. The ACOG, AAP, American Public Health Association (APHA), and the federal Government Accountability Office (GAO) all identify this practice as inappropriate in medical environments and recommend against it.

Adequate Assessment of Staff Competency

Only 52% of facilities in Oklahoma annually assess staff competency for basic breastfeeding management and support.

Implementing comprehensive assessment of staff training and skills for basic breastfeeding management and support establishes the foundation for quality infant feeding care. Adequate training and skills assessment are critical to ensure that mothers and infants receive care that is consistent, evidence-based, and appropriate.

Breastfeeding is associated with decreased risk for infant morbidity and mortality as well as maternal morbidity,¹ and provides optimal infant nutrition. *Healthy People 2020*² establishes breastfeeding initiation, continuation, and exclusivity as national priorities.

Changes in maternity care practices improve breastfeeding rates.

There are many opportunities to protect, promote, and support breastfeeding in Oklahoma. Opportunities such as those listed below can help Oklahoma bring ideal maternity care practices to all Oklahoma hospitals.

Change opportunities:

- Examine Oklahoma regulations for maternity facilities and evaluate their evidence base.
- Sponsor an Oklahoma-wide summit of key decision-making staff at maternity facilities to highlight the importance of evidence-based practices for breastfeeding.
- Encourage and support hospital staff across Oklahoma to be trained in providing care that supports mothers to breastfeed.
- Establish links among maternity facilities and community breastfeeding support networks in Oklahoma.
- Implement evidence-based practices in medical care settings across Oklahoma that support mothers' efforts to breastfeed.
- Integrate maternity care into related hospital-wide Quality Improvement efforts across Oklahoma.
- Promote utilization of the Joint Commission's Perinatal Care Core Measure Set including exclusive breast milk feeding at hospital discharge in Oklahoma hospital data collection systems.

Questions about the mPINC survey?

Oklahoma's
State mPINC Rank
(out of 53)[†]

37

mPINC Care Dimension	Care Dimension Subscore*	Ideal Response to mPINC Survey Question	Percent of OK Facilities with Ideal Response	Item Rank [†]
Labor and Delivery Care	75	Initial skin-to-skin contact is at least 30 min w/in 1 hour (vaginal births)	63	36
		Initial skin-to-skin contact is at least 30 min w/in 2 hours (cesarean births)	62	24
		Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	52	46
		Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	67	19
		Routine procedures are performed skin-to-skin	17	51
Feeding of Breastfed Infants	84	Initial feeding is breast milk (vaginal births)	80	28
		Initial feeding is breast milk (cesarean births)	69	32
		Supplemental feedings to breastfeeding infants are rare	33	14
		Water and glucose water are not used	78	43
Breast-feeding Assistance	83	Infant feeding decision is documented in the patient chart	98	---
		Staff provide breastfeeding advice & instructions to patients	85	46
		Staff teach breastfeeding cues to patients	78	45
		Staff teach patients not to limit suckling time	50	36
		Staff directly observe & assess breastfeeding	78	47
		Staff use a standard feeding assessment tool	70	31
		Staff rarely provide pacifiers to breastfeeding infants	28	44
Contact Between Mother and Infant	80	Mother-infant pairs are not separated for postpartum transition	74	27
		Mother-infant pairs room-in at night	88	21
		Mother-infant pairs are not separated during the hospital stay	51	18
		Infant procedures, assessment, and care are in the patient room	11	18
		Non-rooming-in infants are brought to mothers at night for feeding	97	---
Facility Discharge Care	53	Staff provide appropriate discharge planning (referrals & other multi-modal support)	24	37
		Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	54	41
Staff Training	56	New staff receive appropriate breastfeeding education	24	16
		Current staff receive appropriate breastfeeding education	37	11
		Staff received breastfeeding education in the past year	31	52
		Assessment of staff competency in breastfeeding management & support is at least annual	52	38
Structural & Organizational Aspects of Care Delivery	65	Breastfeeding policy includes all 10 model policy elements	11	47
		Breastfeeding policy is effectively communicated	70	45
		Facility documents infant feeding rates in patient population	71	40
		Facility provides breastfeeding support to employees	72	25
		Facility does not receive infant formula free of charge	9	45
		Breastfeeding is included in prenatal patient education	91	---
		Facility has a designated staff member responsible for coordination of lactation care	61	41

* Quality Practice scores range from 0 to 100 for each question, dimension of care, facility, and state. The highest, best possible score for each is 100. Each facility and state's "Total Score" is made up of subscores for practices in each of 7 dimensions of care.

† Ranks range from 1 to 53, with 1 being the highest rank. In case of a tie, both are given the same rank. State ranks are not shown for survey questions with 90% or more facilities reporting ideal responses.
