Maternity Practices in Infant Nutrition and Care in Missouri —2011 mPINC Survey

This report provides data from the 2011 mPINC survey for Missouri. It describes specific opportunities to improve mother-baby care at hospitals and birth centers in Missouri in order to more successfully meet national quality of care standards for perinatal care.

Breastfeeding is a Breastfeeding is associated with decreased risk for infant morbidity and mortality as well as National Priority maternal morbidity, and provides optimal infant nutrition. Healthy People 2020 establishes breastfeeding initiation, continuation, and exclusivity as national priorities.

Breastfeeding Rates breastfeeding.4

Changes in Maternity practices in hospitals and birth centers can influence breastfeeding behaviors Maternity Care during a period critical to successful establishment of lactation.³ Abundant literature, including a Cochrane review, document that institutional changes in maternity care practices Practices Improve to make them more supportive of breastfeeding increase initiation and continuation of

Breastfeeding Support in Missouri Facilities

Strengths

Provision of Breastfeeding Advice and Counseling

Staff at 94% of facilities in Missouri provide breastfeeding advice and instructions to patients who are breastfeeding, or intend to breastfeed.

The American Academy of Pediatrics (AAP) recommends pediatricians provide patients with complete, current information on the benefits and methods of breastfeeding to ensure that the feeding decision is a fully informed one. Patient education is important in order to establish breastfeeding.

Documentation of Mothers' Feeding Decisions

Staff at 98% of facilities in Missouri consistently ask about and record mothers' infant feeding decisions.

Standard documentation of infant feeding decisions is important to adequately support maternal choice.

Needed Improvements

Appropriate Use of Breastfeeding Supplements

Only 27% of facilities in Missouri adhere to standard clinical practice guidelines against routine supplementation with formula, glucose water, or water. The American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG) Guidelines for Perinatal Care recommend against routine supplementation because supplementation with formula and/or water makes infants more likely to receive formula at home and stop breastfeeding prematurely.

Inclusion of Model Breastfeeding Policy Elements

Only 12% of facilities in Missouri have comprehensive breastfeeding policies including all model breastfeeding policy components recommended by the Academy of . Breastfeeding Medicine (ABM).

The ABM model breastfeeding policy elements are the result of extensive research on best practices to improve breastfeeding outcomes. Facility policies determine the nature of care that is available to patients. Facilities with comprehensive policies consistently have the highest rates of exclusive breastfeeding, regardless of patient population characteristics such as ethnicity, income, and payer status.

Use of Combined Mother/Baby Postpartum Care

Only 22% of facilities in Missouri report that most healthy full-term infants remain with their mothers for at least 23 hours per day throughout the hospital stay.

Mother-infant contact during the hospital stay helps establish breastfeeding and maintain infant weight, temperature, and health. Rooming-in increases breastfeeding learning opportunities and duration and quality of maternal sleep, and reduces supplemental feeds.

Initiation of Mother and Infant Skin-to-Skin Care

Only 47% of facilities in Missouri initiate skin-to-skin care for at least 30 minutes upon delivery of the newborn.

Upon delivery, the newborn should be placed skin-to-skin with the mother and allowed uninterrupted time to initiate and establish breastfeeding in order to improve infant health outcomes and reduce the risk of impairment of the neonatal immune system from unnecessary non-breast milk feeds.

Every two years, CDC administers the national Maternity Practices in Infant Nutrition and Care (mPINC) survey to all hospitals and birth centers in the U.S. that provide maternity care.

Data from this survey can be used to establish evidence-based, breastfeeding-supportive maternity practices as standards of care in hospitals and birth centers across the US. Improved care will help meet Healthy People 2020 breastfeeding objectives and will help improve maternal and child health nationwide.

National Center for Chronic Disease Prevention and Health Promotion

Missouri Summary —2011 mPINC Survey

Survey At each facility, the person who is the most knowledgeable about the facility's **Method** maternity practices related to healthy newborn feeding and care completes the CDC mPINC survey.

Response 87% of the 75 eligible facilities in Missouri responded to the 2011 mPINC Survey. Rate Each participating facility received its facility-specific mPINC benchmarking report in October 2012.

Missouri's Composite Quality Practice Score

(out of 100)

Missouri's Composite Rank[†]

36

(out of 53)

mPINC Dimension of Care	MO Quality Practice Subscore*	Ideal Response to mPINC Survey Question	Percent of MO Facilities with Ideal Response	
Labor and Delivery Care	70	Initial skin-to-skin contact is ≥30 min w/in 1 hour (vaginal births)	47	38
		Initial skin-to-skin contact is ≥30 min w/in 2 hours (cesarean births)	46	20
		Initial breastfeeding opportunity is w/in 1 hour (vaginal births)	50	34
		Initial breastfeeding opportunity is w/in 2 hours (cesarean births)	49	28
		Routine procedures are performed skin-to-skin	30	23
Feeding of Breastfed Infants	82	Initial feeding is breast milk (vaginal births)	75	31
		Initial feeding is breast milk (cesarean births)	78	13
		Supplemental feedings to breastfeeding infants are rare	27	18
		Water and glucose water are not used	79	34
Breastfeeding Assistance	83	Infant feeding decision is documented in the patient chart	98	
		Staff provide breastfeeding advice & instructions to patients	94	
		Staff teach breastfeeding cues to patients	87	20
		Staff teach patients not to limit suckling time	44	29
		Staff directly observe & assess breastfeeding	86	26
		Staff use a standard feeding assessment tool	64	32
		Staff rarely provide pacifiers to breastfeeding infants	28	36
Contact Between Mother and Infant	70	Mother-infant pairs are not separated for postpartum transition	67	20
		Mother-infant pairs room-in at night	70	42
		Mother-infant pairs are not separated during the hospital stay	22	41
		Infant procedures, assessment, and care are in the patient room	2	25
		Non-rooming-in infants are brought to mothers at night for feeding	97	
Facility Discharge Care	42	Staff provide appropriate discharge planning (referrals & other multi-modal support)	24	31
		Discharge packs containing infant formula samples and marketing products are not given to breastfeeding patients	34	34
Staff Training	49	New staff receive appropriate breastfeeding education	13	18
		Current staff receive appropriate breastfeeding education	12	38
		Staff received breastfeeding education in the past year	36	41
		Assessment of staff competency in breastfeeding management & support is at least annual	47	33
Structural & Organizational Aspects of Care Delivery	68	Breastfeeding policy includes all 10 model policy elements	12	39
		Breastfeeding policy is effectively communicated	81	18
		Facility documents infant feeding rates in patient population	68	33
		Facility provides breastfeeding support to employees	71	25
		Facility does not receive infant formula free of charge	3	46
		Breastfeeding is included in prenatal patient education	94	
		Facility has a designated staff member responsible for coordination of lactation care	64	35

^{*} Quality Practice scores range from o to 100 for each question, dimenstion of care, facility, and state. The highest, best possible score for each is 100. Each facility and state's "Composite Quality Practice Score" is made up of subscores for practices in each of 7 dimensions of care.

Improvement is Needed in **Maternity Care Practices** and Policies in Missouri.

Many opportunities exist to protect, promote, and support breastfeeding mothers and infants in Missouri.

Potential opportunities:

Examine Missouri regulations for maternity facilities and evaluate their evidence base.

Sponsor a Missouri-wide summit of key decision-making staff at maternity facilities to highlight the importance of evidencebased practices for breastfeeding.

Encourage and support hospital staff across Missouri to be trained in providing care that supports mothers to breastfeed.

Establish links among maternity facilities and community breastfeeding support networks in Missouri.

Implement evidence-based practices in medical care settings across Missouri that support mothers' efforts to breastfeed.

Integrate maternity care into related hospital-wide Quality Improvement efforts across Missouri.

Promote utilization of the Joint Commission's Perinatal Care Core Measure Set including exclusive breast milk feeding at hospital discharge in Missouri hospital data collection systems.
