

2009 SMART BRFSS MMSA Methodology

2009 Selected Metropolitan/Micropolitan Area Risk Trends From the BRFSS Creation of Metropolitan-Level Weights Methodology

The Behavioral Risk Factor Surveillance System (BRFSS) Selected Metropolitan/Micropolitan Area Risk Trends (SMART) is a documented and verified subset of the 2009 BRFSS, which has been produced to provide some local area estimates. These local areas are identified as metropolitan or micropolitan statistical areas (MMSA) as defined by the Office of Management and Budget (OMB). The data set was produced by adding new analysis weights designed to correspond to the 2009 population estimates for each eligible MMSA. The additional weights were post-stratified to the MMSA-level. The process by which these new weights were obtained is detailed in Appendix C, "Weight Class Collapsing Rules."

Selected Areas

Typically, BRFSS data are used to produce state-level estimates. However, for the SMART project, BRFSS data were used to produce small area-level estimates for MMSAs as defined by the Bureau of the Census. On June 6, 2003, the OMB issued new definitions for metropolitan statistical areas, micropolitan statistical areas, and metropolitan divisions. OMB periodically updates the list of MMSAs. The list of areas used for this analysis can be found at http://www.whitehouse.gov/omb/bulletins/fy05/b05-02_appendix.pdf. For more information about MMSAs, please visit <http://www.census.gov/population/www/estimates/metroarea.html>. A respondent was associated with a particular MMSA on the basis of their county code. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number. MMSA-level estimates have been produced from the BRFSS data for 180 MMSAs that have met the weighting criteria (Appendix C) for the 2009 data year.

Appendix A: List of Variables added to the 2009 Data

Data Documentation for the 9 Variables Added to the 2009 BRFSS Data

ADJMMSA	MMSA-level post-stratification weight. This factor is multiplied by the design weight (<code>_WT2</code>) to get the final MMSA-level weight (<code>_MMSAWT</code>).
AGE_MMSA	Age categories used to set up the initial weighting classes for the MMSA-level weights. 1 – 18–24 2 – 25–34 3 – 35–44 4 – 45–54 5 – 55–64 6 – 65+
AGE_M_F	Age categories used in the final weighting classes for the MMSA-level weights. 1 – 18–24 2 – 25–34 3 – 35–44 4 – 45–54 5 – 55–64 6 – 65+ 7 – 18–34 8 – 35–54 9 – 55+ 10 – 18–44 12 – 18–54 14 – 45–64
RACE_MMS	Race categories used to set up the initial weighting classes for the mmsa-level weights. 0 – Race not used 1 – Non-Hispanic white 2 – Hispanic or non-white
RACE_M_F	Race categories used in the final weighting classes for the MMSA-level weights. 0 – Race not used 1 – Non-Hispanic white 2 – Hispanic or non-white
SEX_MMSA	Sex categories used to set up the initial and final weighting classes for the MMSA-level weights (weight classes are never collapsed across sex). 1 – Male 2 – Female
_MMSA	MMSA code of the metropolitan, micropolitan statistical area, or metropolitan division if appropriate, where the respondent lives. Metropolitan and micropolitan statistical areas and metropolitan divisions are defined by OMB in Bulletin No. 03-04 (http://www.whitehouse.gov/omb/bulletins/b03-04_attach.pdf).
_MMSANAM	MMSA name of the metropolitan/micropolitan statistical area, or metropolitan division if appropriate, where the respondent lives. Metropolitan/micropolitan statistical areas and metropolitan divisions are defined by OMB in Bulletin No. 03-04 (http://www.whitehouse.gov/omb/bulletins/b03-04_attach.pdf).

_MMSAWT The new MMSA-level weight. This is the weight to use when generating MMSA-level estimates (metropolitan or micropolitan statistical areas or metropolitan divisions) for questions that were asked of the whole sample.

**Appendix B: List of the 180 MMSAs that have MMSA-Level Weights in 2009
BRFSS Data**

**Metropolitan/Micropolitan Statistical Area or Metropolitan Division Codes
and Names**

MMSA Number	MMSA Name
10420	Akron, OH Metropolitan Statistical Area
10740	Albuquerque, NM Metropolitan Statistical Area
10780	Alexandria, LA Metropolitan Statistical Area
10900	Allentown-Bethlehem-Easton, PA-NJ Metropolitan Statistical Area
11260	Anchorage, AK Metropolitan Statistical Area
11700	Asheville, NC Metropolitan Statistical Area
12060	Atlanta-Sandy Springs-Marietta, GA Metropolitan Statistical Area
12100	Atlantic City-Hammonton, NJ Metropolitan Statistical Area
12260	Augusta-Richmond County, GA-SC Metropolitan Statistical Area
12300	Augusta-Waterville, ME Micropolitan Statistical Area
12420	Austin-Round Rock, TX Metropolitan Statistical Area
12580	Baltimore-Towson, MD Metropolitan Statistical Area
12620	Bangor, ME Metropolitan Statistical Area
12740	Barre, VT Micropolitan Statistical Area
12940	Baton Rouge, LA Metropolitan Statistical Area
13644	Bethesda-Frederick-Gaithersburg, MD Metropolitan Division
13740	Billings, MT Metropolitan Statistical Area
13820	Birmingham-Hoover, AL Metropolitan Statistical Area
13900	Bismarck, ND Metropolitan Statistical Area
14260	Boise City-Nampa, ID Metropolitan Statistical Area
14484	Boston-Quincy, MA Metropolitan Division
14580	Bozeman, MT Micropolitan Statistical Area
14740	Bremerton-Silverdale, WA Metropolitan Statistical Area
14860	Bridgeport-Stamford-Norwalk, CT Metropolitan Statistical Area
15380	Buffalo-Niagara Falls, NY Metropolitan Statistical Area
15540	Burlington-South Burlington, VT Metropolitan Statistical Area
15580	Butte-Silver Bow, MT Micropolitan Statistical Area
15764	Cambridge-Newton-Framingham, MA Metropolitan Division
15804	Camden, NJ Metropolitan Division

MMSA Number	MMSA Name
15940	Canton-Massillon, OH Metropolitan Statistical Area
16220	Casper, WY Metropolitan Statistical Area
16300	Cedar Rapids, IA Metropolitan Statistical Area
16620	Charleston, WV Metropolitan Statistical Area

49420	Yakima, WA Metropolitan Statistical Area
49660	Youngstown-Warren-Boardman, OH-PA Metropolitan Statistical Area

Appendix C: Weight Class Collapsing Rules

MMSA-Level Weighting Methodology

On June 6, 2003, the Office of Management and Budget issued new definitions for metropolitan statistical areas, micropolitan statistical areas, and metropolitan divisions. See (http://www.whitehouse.gov/omb/bulletins/b03-04_attach.pdf). Respondents were assigned to an MMSA on the basis of their county codes. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number before the respondent identifies a county during data collection.

All respondents in cities were then assigned to age, race, and sex categories. If a respondent's age was missing, it was imputed by using the variable `_IMPAGE` available in the BRFSS public-use 2009 data file. If a respondent's race was missing, it was imputed by using the majority race for the MMSA in which the respondent lives. The six age categories were 18–24, 25–34, 35–44, 45–54, 55–64, and 65+. The two race categories were non-Hispanic white, and Hispanic or non-white.

Within each MMSA, respondents were assigned to weighting classes on the basis of the age, race, and sex categories described above. Some states do not use race in post-stratification. For the MMSA in states that do not use race, only the age and sex groups were used to set up weighting classes. For the MMSA in states that do use race, all three groups were used to set up weighting classes. For the MMSA that cross state lines, the post-stratification variables used by the state in which the majority of the MMSA's population lives were used to set up weighting classes. Thus, MMSA that use race had 24 initial weighting classes and MMSA that do not use race had 12 initial weighting classes.

Weighting classes with fewer than 19 sample members were collapsed in accordance with the following rules:

1. For those MMSA that used race in post-stratification, the race categories within a sex category collapse if at least 80% of the age categories in that race /sex cross-classification (i.e., 5 of 6 the age categories) have fewer than 19 members. In MMSA that used race to create the initial weighting classes, the number of weighting classes was thus reduced from 24 to 12 if race was collapsed for both sexes and from 24 to 18 if race was collapsed for only one sex.
2. Collapse the two youngest age categories in any age/sex or age/sex/race weighing class if either contains fewer than 19 members. Do the same for the two middle and the two oldest age categories in each remaining weighting class.
3. If either of the age/sex or age/sex/race categories have fewer than 19 members, then the age categories were collapsed until there were 19 members in some combination of the age categories listed in the variable `AGE_M_F`.
4. Do not collapse weighting classes across sex.
5. Do not include an MMSA in the reweighting that still has weighting classes with fewer than 19 sample members after all collapsing rules have been applied. These MMSAs will be excluded from the 2009 SMART BRFSS.

There were 180 MMSA that had at least 500 respondents in the 2009 BRFSS and at least 19 sample members in all final weighting classes. See Appendix B in the Data Documentation for a list of these MMSA. Only the respondents in these MMSA were given a MMSA-level weight. To calculate the new MMSA-level weight, we applied a post-stratification adjustment factor to the

design weight (_WT2) and created the adjustment factor by taking the ratio of the total population over the sum of the design weights for each weighting class within each MMSA. The new MMSA-level weight (_MMSAWT) should be used to generate estimates in these 180 MMSA.

Example SUDAAN Code:

For example, suppose we want an estimate for the Atlanta-Sandy Springs-Marietta, GA Metropolitan Statistical Area (MMSA code = 12060). Here's SAS/SUDAAN code that could be used to do this:

```
proc sort data=xxxx;  
by _STSTR _SEQNO;  
run;
```

```
proc descript data=xxxx filetype=sas design=wr;  
nest _STSTR _SEQNO / missunit;  
weight _MMSAWT;  
subpopn _MMSA=12060 / name=" Atlanta-Sandy Springs-Marietta, GA";  
var (your analysis variable);  
catlevel (the level of your analysis variable for which you want an estimate);  
run;
```
