

2010 SMART BRFSS County Methodology

2010 Selected Metropolitan/Micropolitan Area Risk Trends from the BRFSS Creation of Metropolitan-level weights

The Behavioral Risk Factor Surveillance System (BRFSS) Selected Metropolitan/Micropolitan Area Risk Trends (SMART) is a documented and verified subset of the 2010 BRFSS, which has been produced to provide some local area estimates. These local areas are identified counties within metropolitan or micropolitan statistical areas (MMSA) as defined by the Office of Management and Budget. The data set was produced by adding new analysis weights designed to correspond to the 2010 population estimates for each eligible county within a selected MMSA. The additional weights were post-stratified to the county-level. The process by which these new weights were obtained is detailed in Appendix C, "Weight Class Collapsing Rules."

Selected Areas

Typically, BRFSS data are used to produce state-level estimates. However, for the SMART project, BRFSS data were used to produce small area-level estimates for MMSAs as defined by the Bureau of the Census. On June 6, 2003, the Office of Management and Budget (OMB) issued new definitions for metropolitan statistical areas, micropolitan statistical areas, and metropolitan divisions. OMB periodically updates the list of MMSAs. The list of areas used for this analysis can be found <http://www.whitehouse.gov/sites/default/files/omb/assets/bulletins/b10-02.pdf>. For more information about MMSAs, please visit <http://www.census.gov/population/www/estimates/metroarea.html>. A respondent was associated with a particular MMSA on the basis of their county code. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number. There were 192 MMSAs that met the analysis criteria for the 2010 data year. From within the 192 MMSAs, county-level estimates have been produced from the BRFSS data for 302 counties that have met the weighting criteria (Appendix C) for the 2010 data year.

Appendix A: List of Variables added to the 2010 Data

Data Documentation for the 13 Variables Added to the 2010 BRFSS Data

ADJCNTY	County-level post-stratification weight. This factor is multiplied by the design weight (_WT2) to get the final County-level weight (_CNTYWT).
AGE_CNTY	Age categories used to set up the initial weighting classes for the county-level weights. 1 – 18–24 2 – 25–34 3 – 35–44 4 – 45–54 5 – 55–64 6 – 65+
AGE_C_F	Age categories used in the final weighting classes for the county-level weights. 1 – 18–24 2 – 25–34 3 – 35–44 4 – 45–54 5 – 55–64 6 – 65+ 7 – 18–34 8 – 35–54 9 – 55+ 10 – 18–44 11 – 45+ 12 – 18–54 14 – 45–65
RACE_CNT	Race categories used to set up the initial weighting classes for the county-level weights. 0 – Race not used 1 – Non-Hispanic white 2 – Hispanic or non-white
RACE_C_F	Race categories used in the final weighting classes for the county-level weights. 0 – Race not used 1 – Non-Hispanic white 2 – Hispanic or non-white
SEX_CNTY	Sex categories used to set up the initial and final weighting classes for the county-level weights (weight classes are never collapsed across sex). 1 – Male 2 – Female
_CNTY	FIPS County code of the county where the respondent lives. This variable is equivalent to CTYCODE, except for respondents with a CTYCODE of “777” or “999”. The county code for these respondents was imputed based on information provided by BSB.
_CNTYNAM	County name of the county where the respondent lives.

_CNTYWT The new county-level weight. This is the weight to use when generating county-level estimates for questions that were asked of the whole sample.

Appendix B: List of the 302 counties that have COUNTY-level Weights in 2010 BRFSS Data

State Name	FIPS State	FIPS County	County Name
Alabama	1	73	Jefferson County
Alabama	1	97	Mobile County
Alabama	1	125	Tuscaloosa County
Arizona	4	13	Maricopa County
Arizona	4	19	Pima County
Arizona	4	21	Pinal County
Arkansas	5	7	Benton County
Arkansas	5	119	Pulaski County
Arkansas	5	143	Washington County
California	6	1	Alameda County
California	6	13	Contra Costa County
California	6	37	Los Angeles County
California	6	59	Orange County
California	6	61	Placer County
California	6	65	Riverside County
California	6	67	Sacramento County
California	6	71	San Bernardino County
California	6	73	San Diego County
California	6	75	San Francisco County
California	6	81	San Mateo County
California	6	85	Santa Clara County
Colorado	8	1	Adams County
Colorado	8	5	Arapahoe County
Colorado	8	31	Denver County
Colorado	8	35	Douglas County
Colorado	8	41	El Paso County
Colorado	8	59	Jefferson County
Colorado	8	69	Larimer County
Connecticut	9	1	Fairfield County
Connecticut	9	3	Hartford County
Connecticut	9	7	Middlesex County

Appendix C: Weight Class Collapsing Rules

County-level Weighting Methodology

Respondents were assigned to a county on the basis of their FIPS county codes. Missing county codes were imputed from a value included in the purchased telephone sample that represents the county most likely associated with the telephone number before the respondent identifies a county during data collection.

All respondents in counties were then assigned to age, race, and sex categories. If a respondent's age was missing, it was imputed by using the variable `_IMPAGE` available in the BRFSS public-use 2010 data file. If a respondent's race was missing, it was imputed by using the majority race for the county in which the respondent lives. The six age categories were 18-24, 25-34, 35-44, 45-54, 55-64, and 65+. The two race categories were non-Hispanic white, and Hispanic or non-white.

Within each county, respondents were assigned to weighting classes on the basis of the age, race, and sex categories described above. Some states do not use race in post-stratification. For the county in states that do not use race, only the age and sex groups were used to set up weighting classes. For the county in states that do use race, all three groups were used to set up weighting classes. Thus, the counties that use race had 24 initial weighting classes and counties that do not use race had 12 initial weighting classes.

Weighting classes with fewer than 19 sample members were collapsed in accordance with the following rules:

1. For those counties that used race in post-stratification, the race categories within a sex category collapse if at least 80% of the age categories in that race /sex cross-classification (i.e. 5 of 6 the age categories) have fewer than 19 members. In counties that used race to create the initial weighting classes, the number of weighting classes was thus reduced from 24 to 12 if race was collapsed for both sexes and from 24 to 18 if race was collapsed for only one sex.
2. Collapse the two youngest age categories in any age/sex or age/sex/race weighing class if either contains fewer than 19 members. Do the same for the two middle and the two oldest age categories in each remaining weighting class.
3. If either of the age/sex or age/sex/race categories have fewer than 19 members, then the age categories were collapsed until there were 19 members in some combination of the age categories listed in the variable `AGE_C_F`.
4. Do not collapse weighting classes across sex.
5. Do not include a county in the reweighting that still has weighting classes with fewer than 19 sample members after all collapsing rules have been applied. These counties will be excluded from the 2010 SMART BRFSS.

There were 192 MMSAs that had at least 500 respondents in the 2010 BRFSS and at least 19 sample members in all final weighting classes. There are 302 counties within the 192 MMSAs that had at least 19 sample members in all final weighting classes. (See Appendix B in the Data Documentation for a list of these counties.) Only the respondents in these counties were given a county-level weight. To calculate the new county-level weight, we applied a post-stratification adjustment factor to the design weight (`_WT2`) and created the adjustment factor by taking the ratio of the total population over the sum of the design weights for each weighting class within

each county. The new county-level weight (_CNTYWT) should be used to generate estimates in these 302 counties.

Example SUDAAN Code:

For example, to estimate for DeKalb County, GA (_STATE=13, _CNTY=89). The following SAS/SUDAAN code that could be used to do this:

```
data xxxx;  
set yyyy;
```

```
if (_STATE=13 & _CNTY=89) then DUMMY=1;  
run;
```

```
proc sort data=xxxx;  
by _STSTR SEQNO;  
run;
```

```
proc descript data=xxxx filetype=sas design=wr;  
nest _STSTR SEQNO / missunit;  
weight _CNTYWT;  
subpopn DUMMY=1 / name="DeKalb County, GA";  
var (your analysis variable);  
catlevel (the level of your analysis variable for which you want an estimate);  
run;
```
