## Thimerosal: You asked. We answered.

Some parents have questions about the safety of ingredients – like thimerosal (“THY-mayr-uh-sal”) – in children’s shots (vaccines).

We want you to know that thimerosal is no longer used in children’s shots, except the flu shot. You can ask for a flu shot without thimerosal.

Check out these answers to common questions about thimerosal.

### What is thimerosal?

Thimerosal is added to some shots to prevent germs (like bacteria and fungi) from growing in them.

If germs grow in vaccines, they can cause illness — or even death.

### Why do some people worry about thimerosal in vaccines?

You may have heard that thimerosal has mercury in it. Not all types of mercury are the same. Some types of mercury, like mercury in some kinds of fish, can stay in the human body and make us sick. Thimerosal is a different type of mercury. It doesn’t stay in the body, and is unlikely to make us sick.

### Is thimerosal safe?

Yes. Thimerosal has been used safely in vaccines for a long time (since the 1930s).

Scientists have been studying the use of thimerosal in vaccines for many years. They haven’t found any evidence that thimerosal causes harm.

### Is thimerosal still used in vaccines for children?

No. Thimerosal hasn’t been used in vaccines for children since 2001.

However, thimerosal is still used in some flu vaccines. The flu vaccine is recommended for all children. If you are worried about thimerosal, ask for a flu vaccine without it.

### Does thimerosal cause autism?

No. Research does not show any link between thimerosal and autism.

**Remember:** Shots help protect your kids from dangerous diseases. The benefits of vaccines outweigh any possible side effects. [Find out which shots your children need.](#)

## Are there side effects from thimerosal?

Most people don't have any side effects from thimerosal. The most common reactions are usually mild (like redness and swelling at the place where the shot was given) and only last 1 to 2 days. It's very unlikely that you will have an allergic reaction to thimerosal.

## How can I find out if thimerosal is in a vaccine?

1. Ask your doctor or pharmacist.
2. Ask to see the vaccine's list of ingredients. All vaccine packages come with information (called an insert) that lists the ingredients.
3. [Check out this complete list of vaccines to see which ones contain thimerosal.](#)
