

Climate and Health: A Decade of Preparing Communities

CDC's Climate and Health Program is celebrating 10 years of supporting state, tribal, local, and territorial public health agencies as they prepare for the health impacts of a changing climate.

The Climate and Health Program's 10th anniversary exhibit in the CDC David J. Sencer Museum highlights CDC's work on public health threats associated with a changing climate, including threats from extreme heat, flooding, and wildfires.

The BRACE framework helps partners develop and implement health adaptation plans and address critical public health gaps.

CDC's Climate-Ready States and Cities Initiative helps 18 grantees use the BRACE framework to identify local climate impacts, health effects linked to these impacts, and at-risk populations and locations.
