What Airline Workers Need to Know about COVID-19

Coronavirus disease 2019 (COVID-19) is a respiratory illness caused by a virus called SARS-CoV-2. Symptoms often include a fever, cough, or shortness of breath. Our understanding of how the virus spreads is evolving as we learn more about it, so check the CDC website (https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/how-covid-spreads.html) for the latest information.

The virus is thought to spread mainly from person-to-person:

- Between people who are in close contact with one another (within about 6 feet).
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks.

Recent studies indicate that the virus can be spread by people before they develop symptoms (pre-symptomatic) or who never develop symptoms (asymptomatic). It also may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes. However, this is not thought to be the main way the virus spreads. Older adults and people of any age who have serious underlying medical conditions may be at higher risk for more serious complications (https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-at-higher-risk.html) from COVID-19.

CDC recommends wearing cloth face coverings (https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html) in public settings where other social distancing measures are difficult to maintain, especially in areas of significant community-based transmission. Cloth face coverings may prevent people who don’t know they have the virus from transmitting it to others. These face coverings are not surgical masks or respirators and are not appropriate substitutes for them in workplaces where masks or respirators are recommended or required.

As an airline catering truck driver or helper, how can I protect myself?

As an airline catering truck driver or helper, you could be exposed to COVID-19 in situations such as having close contact with someone with COVID-19 or touching your mouth, nose, or eyes after handling frequently touched items used by someone with COVID-19 such as catering and food service carts, used non-disposable food service items (e.g., utensils and serving trays), and solid waste.

- Limit close contact with others by maintaining a distance of at least 6 feet, when possible.
- Do not enter the aircraft cabin if an ill traveler has been identified on a flight until after the ill traveler has been removed and enhanced cleaning (https://www.cdc.gov/quarantine/air/managing-sick-travelers/ncov-airlines.html) has been performed.
- Follow your employer’s normal guidance for handling solid waste from domestic and international flights.
- Practice routine cleaning and disinfection of frequently touched surfaces, such as workstations, catering and food service carts, door handles, tables, countertops, steering wheels or other commonly touched surfaces inside the truck. Follow the directions on the cleaning product’s label.
- Wear your normally required personal protective equipment (PPE) to perform your job tasks on the airplane.
- Wear gloves when handling non-disposable food service items used by passengers including utensils and serving trays, as usual.
- Proper hand hygiene (https://www.cdc.gov/handwashing/index.html) is an important infection control measure. Wash your hands regularly with soap and water for at least 20 seconds. If soap and water are not readily available, use an alcohol-based hand sanitizer containing at least 60% alcohol.
As an airline catering truck driver or helper, how can I protect myself? (continued)

- Key times to clean hands in general include:
  » Before, during, and after preparing food
  » Before eating food
  » After using the toilet
  » After blowing your nose, coughing, or sneezing

- Additional times to clean hands on the job include:
  » Before and after work shifts
  » Before and after work breaks
  » After touching frequently touched surfaces such as food service carts
  » After putting on, touching, or removing cloth face coverings

- Avoid touching your eyes, nose, or mouth.

What steps should my employer take?

Employers of airline catering truck drivers or helpers should have a COVID-19 health and safety plan to protect employees. This plan should be shared with you and your coworkers. Your employer should:

- Provide information on whom to contact if employees become sick.

- Implement flexible sick leave and supportive policies and practices. Consider drafting non-punitive emergency sick leave policies if sick leave is not offered to some or all employees.

- Designate someone to be responsible for responding to COVID-19 concerns. Employees should know who this person is and how to contact them.

- Provide employees with accurate information about COVID-19, its symptoms, how it spreads, and risk of exposure.

- Provide training on proper hand washing (https://www.cdc.gov/handwashing/index.html) practices and other routine infection control precautions. This will help prevent the spread of many diseases, including COVID-19.

- Provide employees with the normally required PPE and provide training on using it.

- Provide employees with access to soap, clean running water, and drying materials, or alcohol-based hand sanitizers containing at least 60% alcohol at their worksite.

- Provide disposable disinfecting wipes so that commonly touched surfaces such as workstations, catering and food service carts, door handles, tables, countertops, steering wheels and other commonly touched surfaces inside the truck can be wiped down by employees. Use **products to disinfect that meet EPA’s criteria for use against SARS-CoV-2** (https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2), diluted household bleach solutions, or alcohol solutions with at least 70% alcohol, and are appropriate for the surface. Follow manufacturer’s directions for use.

- Provide tissues and no-touch disposal containers for employees.

- Frequently clean employee break rooms, rest areas, and other common areas.

- Place posters that encourage **staying home when sick** (https://www.cdc.gov/nonpharmaceutical-interventions/tools-resources/educational-materials.html), **covering coughs and sneezes** (https://www.cdc.gov/healthywater/hygiene/etiquette/coughing_sneezing.html) and **washing hands often** (https://www.cdc.gov/handwashing/materials.html) at the entrance to the workplace and in other workplace areas where employees are likely to see them.

- Follow all applicable federal worker safety and health regulations and public health agency guidelines.

Where can I get more information?

Stay informed. Talk to your employer, supervisor, union representative, or airport personnel who are responsible for responding to COVID-19 concerns. See these sources for more information on reducing the risk of worker exposures to COVID-19:
