If you test positive for COVID-19

**TAKE STEPS TO PROTECT OTHERS REGARDLESS OF YOUR COVID-19 VACCINATION STATUS**

**STAY HOME.**
Isolate at home for at least 10 days. Stay in a specific room and away from other people in your home.

**GET REST AND STAY HYDRATED.**
If you develop symptoms, continue to isolate for at least 10 days after symptoms began and until you do not have a fever without using medications to reduce fever.

**STAY IN TOUCH WITH YOUR DOCTOR.**
Contact your doctor as soon as possible if you are an older adult or have underlying medical conditions.

**CONTACT YOUR DOCTOR OR HEALTH DEPARTMENT ABOUT ISOLATION IF YOU**
- Are severely ill or have a weakened immune system.
- Had a positive test result followed by a negative result.
- Test positive for many weeks.

If you test negative for COVID-19:
- The virus was not detected.

If you have symptoms of COVID-19:
- You may have received a false negative test result and still might have COVID-19.
- Isolate from others.

If you do not have symptoms of COVID-19 and you were exposed to a person with COVID-19:
- You are likely not infected, but you still may get sick.
- Contact your doctor about your symptoms, about follow-up testing, and how long to isolate.
- Self-quarantine for 14 days at home after your exposure.
- If you are fully vaccinated, you do not need to self quarantine.
- Contact your doctor or local health department regarding options to reduce the length of your quarantine.

A negative test result does not mean you won’t get sick later.
