Graphs showing the reported cases of COVID-19 for each county from April 1, 2021, to July 1, 2021. The graphs display the number of new cases reported over time, with data from various models including the Ensemble. The graphs also show prediction intervals for the forecasts, with inner bands representing 50% prediction intervals and outer bands representing 95% prediction intervals. The data is synchronized with updates as of June 14, 2021, available at the CDC website.
Nebraska*:

New weekly cases may decrease in this location over the next four weeks. For these locations, the ensemble forecast indicates a probability of 0.75 or greater that fewer cases will be reported in week four of the forecast than in the last reported week.

*New weekly cases may decrease in this location over the next four weeks. For these locations, the ensemble forecast indicates a probability of 0.75 or greater that fewer cases will be reported in week four of the forecast than in the last reported week.
