How to Protect Yourself and Others

Know how it spreads

- There is currently no vaccine to prevent coronavirus disease 2019 (COVID-19).
- The best way to prevent illness is to avoid being exposed to this virus.
- The virus is thought to spread mainly from person-to-person.
  » Between people who are in close contact with one another (within about 6 feet).
  » Through respiratory droplets produced when an infected person coughs, sneezes or talks.
  » These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
  » COVID-19 may be spread by people who are not showing symptoms.

Everyone should

Clean your hands often

- Wash your hands often with soap and water for at least 20 seconds especially after you have been in a public place, or after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub them together until they feel dry.
- Avoid touching your eyes, nose, and mouth with unwashed hands.

Avoid close contact

- Limit contact with others as much as possible.
- Avoid close contact with people who are sick.
- Put distance between yourself and other people.
  » Remember that some people without symptoms may be able to spread virus.
  » This is especially important for people who are at higher risk of getting very sick. www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-at-higher-risk.html
Cover your mouth and nose with a mask when around others

- You could spread COVID-19 to others even if you do not feel sick.
- Everyone should wear a mask in public settings and when around people not living in their household, especially when social distancing is difficult to maintain.
  » Masks should not be placed on young children under age 2, anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance.
- The mask is meant to protect other people in case you are infected.
- Do NOT use a facemask meant for a healthcare worker.
- Continue to keep about 6 feet between yourself and others. The mask is not a substitute for social distancing.

Cover coughs and sneezes

- Always cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow.
- Throw used tissues in the trash.
- Immediately wash your hands with soap and water for at least 20 seconds. If soap and water are not readily available, clean your hands with a hand sanitizer that contains at least 60% alcohol.

Clean and disinfect

- If surfaces are dirty, clean them: Use detergent or soap and water prior to disinfection.
- Then, use a household disinfectant. You can see a list of EPA-registered household disinfectants here.
