

PUBLIC HEALTH PREPAREDNESS AND RESPONSE

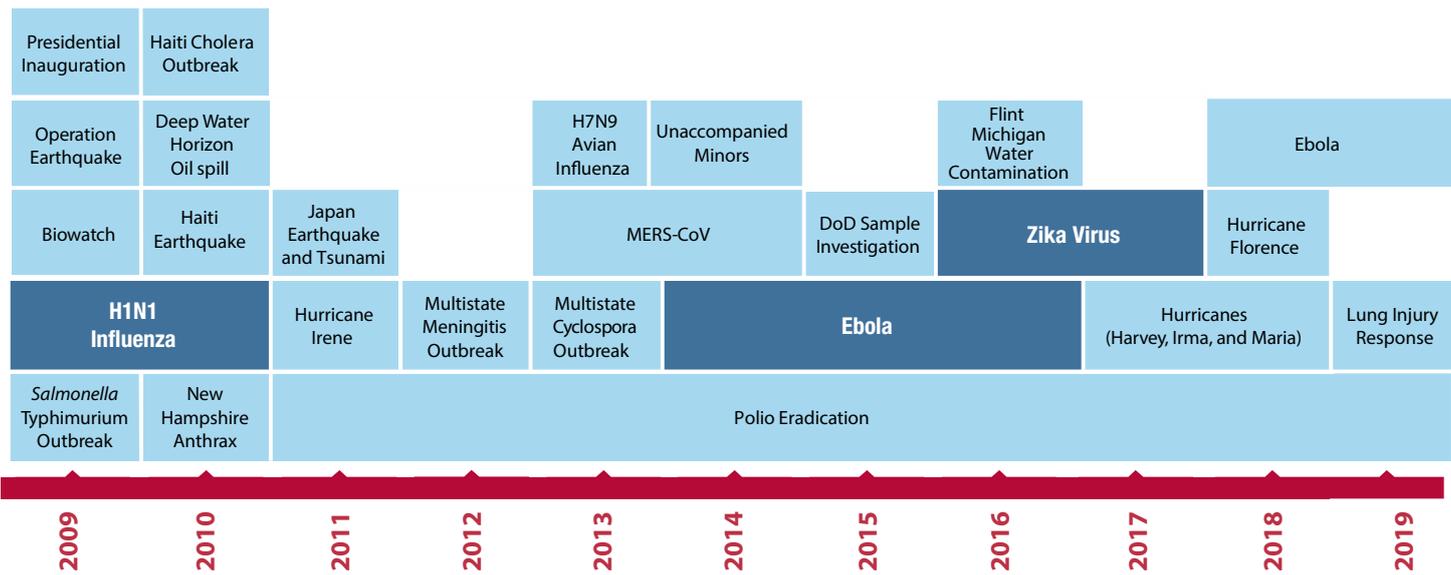

CDC is a preparedness and response agency, always alert for health threats. CDC's Center for Preparedness and Response (CPR) ensures the United States can quickly respond to and effectively manage expected, unexpected, and unimaginable public health threats. Recognizing that our nation is always at risk, CPR fortifies our defenses against outbreaks, natural disasters, and chemical or bioterrorist attacks. We reduce illness and injury by empowering communities to prepare for, detect, and rapidly respond to any emergency. In a crisis, CPR's experts stand ready to lead the response, connecting people with resources and leveraging CDC's world class scientific expertise to protect our nation's health and safety.

CDC Preparedness and Response Funding

10 Years of CDC Public Health Emergency Responses

Indicates a Level 1 Response (Highest Level)

PREPAREDNESS & RESPONSE: BY THE NUMBERS 2019

PREPARE

\$623 M

Public Health Emergency Preparedness (PHEP) program funds awarded to 62 jurisdictions

49

CDC preparedness experts assigned to 43 jurisdictions across the nation

22

Global Health Security partner countries that sent public health leaders for emergency management training at CDC headquarters

DETECT

174

Laboratories equipped to detect, identify, and respond to chemical or biological threats and emerging infectious diseases—part of the Laboratory Response Network (LRN)

206

Inspections of laboratories conducted by the Federal Select Agent Program in 2018 to ensure compliance with biosafety and security regulations

70%

Percentage of the nation's emergency department (ED) visits that are contributed to CDC's National Syndromic Surveillance Program's BioSense Platform

RESPOND

2,431

Emergency responders across the country trained on how to receive and distribute lifesaving medical countermeasures

23,702

Calls triaged by CDC's Emergency Operations Center from state health departments, clinicians, hospitals, and the public

456

CDC staff deployed as responders for the Polio, Ebola and Lung Injury responses
