

About Dengue

4

There are **four** different dengue viruses.
You can get dengue up to **four** times in your lifetime.

3

Three common symptoms are fever, aches/pains, and nausea/vomiting.

2

The **second** infection can be the most severe.

1

The best way to protect your child is to vaccinate them.
Children 9–16 years old who have had dengue can get vaccinated.

Three doses of the vaccine are needed for full protection.
